The Tea Trade of India.—The references to the export of produce in Mr. O'Conor's review of the trade of India are encouraging. The Indian tea trade, we know, has increased by leaps and bounds, but it will be news to planters and tea proprietors on this side to learn that they expected to be ruined by the closing of the Indian mints. The speeches made at public meetings of tea companies in London at the time were not at all in this strain. Mr. O'Conor's review of the position shows that on the whole Indian tea planters are doing very well, and they deserve to succeed. In Great Britain they sell three pounds for every one of Chinese or Japanese. It is but thirty years since the proportion became worth tabulating, and then, in 1865, the Indian, in-

cluding the Ceylonese, was but 3 per cent., China supplying 97. Not till 1887 did the former amount to one-half, and that for only a single month in the year.

THE MARKETS FOR INDIAN TEA.—The United Kingdom, it is stated, continues to be the great market for Indian tea, as much as 92 per cent. of the exports of the year having been shipped thither. Of the small quantity not shipped to the United Kingdom Australia takes a considerable but unfortunately not an increasing share; Indian tea seems so make no headway in the colonies in competition with China and Ceylon tea. Persia during the last four years has been taking larger quantities. As regards the trade with Persia, Her Majesty's Consul at Bushire writes in his report for 1894: "There has been a strong demand throughout the year for Indian and Batavian teas, which seem to be steadily supplanting the China teas in favour with the Persian consumer. Heavy consignments, chiefly from India, were received by native merchants who found no difficulty in disposing of them at a good profit. It was, however, at the port of Bandar-Abbas that this trade received its most vigorous impulse, the import being more than double that ef the previous year." Some of the tea at any rate imported into Bandar-Abbas, was destined for consumption in Russian Asiatic territory, and it seems probable that the effect of recent fiscal arrangements of the Russians will divert the transit trade to Batoum and the Trans-Caspian Railway. A new feature in the trade of the year is the largely increased export to Asiatic Turkey, and it is to be hoped that the exports to this country may become larger. Exports to the United states and Canada have also developed very greatly, though the aggregate is still relatively trifling. A good deal has been said in trade reports from China of the gratifying revival in the tea trade which marked 1894, and it seems that the quantity exported was slightly larger than it had been in the preceding year. China tea, however, has not succeeded in competing with Indian tea in that great market, the United Kingdom, which takes more than nine-tenths of our tea and nearly as much of Ceylon tea. Steadily and surely, year by year since 1886, the importation of China tea into England has fallen and that of India has increased, until last year close on three pounds of Indian tea were imported for every pound of China. This latter tea still retains its hold of the Australian and American markets, where quality in tea is hardly yet appreciated except by a select few, and where Indian tea consequently has not been able to find its way in considerable quantity.

TEA WARRANTS.—A Bill affecting the title of tea warrants is being promoted by the London Chamber of Commerce under the title of the Warehousemen's Certificates Bill. The chief object of the measure is to render the title of tho holders of a warrant, in certain cases which are of frequent occurrence, more complete and secure than it is alleged to be under the present law. Under the law as it now stands, if a warrant is stolen and pawned, the goods can be followed and recovered. The Bill under notice is intended to secure for the holder of the warrant a good title against the original holder. The following is the principal clause on this subject in the Bill: "Every certificate or warrant small be a document of title to the goods specified therein within the meaning of the Factors Act, 1889, and shall bo transferable by indorsement, whether in blank or specially; and any holder of the certificate or warrant shall have the same right to the possession of that property in the goods on behalf of the holder of the certificate or warrant." Discussing the proposed measure from a trade point of view, tho *Grocer* says: "Such a provision if it were to become law, could not fail to encourage fraud and theft by increasing the number of receivers of stolen property. When the custom of the trade in dealing with warrants is remembered the seriousness of the proposed change will at once be recognised. It is the custom of buyers of goods for which warrants are issued to send a cheque to the broker, and in many instances to take an order for the warrant to the merchant and carry the warrant to the wholesale dealer's office. Thence the warrant is taken to the Clearing House or the warehouse; and this duty is frequently, in the hurry of business, entrusted to youths, who carry the warrants through crowded streets, where, of course, there are many chances of robbery. Such robberies do not now take place, because the warrant is of no use to the thief. The warrants when delivered to the warehouse proprictors are entrusted by them to their clerks; and here again, if the proposed Bill became law, a fresh temptation would be offered, as these clerks would be able to obtain money on them if they were so disposed. At present they could not so negotiate the warrants, for the reason that they do not carry a good title with them. Why such a Bill should ever have been promoted it is not easy to understand. It would certainly open a door for fraud by enabling advances to be obtained on stolen warrants. At present the banker or other financier is in the same position as the pawnbroker. If the latter makes an advance on stolen goods, the rightful owner on discovering their whereabouts can claim them. Therefore thieves do not find it easy to dispose of their booty through such a channel. Why should anyone who makes an advance upon stolen warrants be relieved of the same liability? The warehouse proprietors say they do not want the Bill; bankers, who have had the matter brought before them, say they do not want it. The retail grocer, who has to entrust his warrants with the wholesale dealer for clearing, certainly does not want it. It is to be hoped therefore, that such an objectionable proposal will not be further pressed."

PRODUCE AND THE BOARD OF TRADE RETURNS.—From the Board of Trade Returns for clearances of tea for home March we find that the use was considerably in excess of the arrivals, and the stock in bond was reduced, showing a deficiency of 2,492,500lb. As regards coffee, there was a plentiful supply, the clearances being moderate, and the stock nearly equal to that of last year. Cocoa came forward plentifully, and although the deliveries were good, there is a material excess in the bonded stock. There have been superabundant imports of sugar.

IMITATING THE TEA PLANTERS.—The coffee planters of Brazil seem disposed to imitate the methods of Indian and Ceylon tea planters in pushing the sale of their produce, A conference of delegates from the several coffee-producing states of Brazil has lately been held in Metropolis to consider measures for promoting the export trade in Brazil's most important product. The following recommendations were adopted by the conference: The appointment of a permanent executive committee in Rio de Janeiro, to be composed of one member from each coffee state; the establishment of cafes and permanent exhibitions for the purpose of increasing the consumption of Brazilian coffee in foreign countries; appropriations of 2,000,000 milreis in the first year and 1,000,000 milreis per annum thereafter for meeting the respective expenses (two-fifths to be paid by S. Paulo, one fifth by the State of Rio de Janeiro, one-fifth by that of Minas Geraes, one-tenth by that of Bahia, and one-tenth by that of Espirito Santo); an application to the Federal Government for negotiations with foreign Governments for obtaining a reduction in the import duties; and the co-operation of coffee planters with the permanent executive committee in the execution of this programme.

THE BRAZIL COFFEE MARKET.—The reports of the Rio coffee market furnish an illustration of the influence of low exchange in stimulating exports, even when it might be supposed that a comparative scarcity of supplies in the producing market, with reserve stocks in the consuming markets would, by raising prices, tend to check the outflow. Although tho relatively diminishing supplies and prospects had the effect of forcing up Brazilian prices, tho advance was in paper, and was, therefore, so far as the buyers for sale on a gold basis was concerned, counteracted by the decline of exchange. With a prospect of short supplies, therefore, the foreign, and particularly the American buyer, was induced to take advantage of the low exchange to

secure supplies at what, notwithstanding the advance in Brazil, would still be relatively low gold prices.

COCONUT CULTURE IN VENEZUELA.—With reference to the development of coconut cultivation in Ceylon it may be pointed out that in Venezuela the coconut tree thrives remarkably well. For hundreds of miles the coast presents a narrow flat surface, in many places extending some distance back; and the mountainous formation in other places is equally well adapted for the prolific production of the fruit. All the soap factories rely, to a great extent, upon their own groves for the oil from which they manufacture their product; but these groves are an insignificant patch when compared with the waste and barren lands, unfit for any other agricultural purpose, and to be obtained at a very cheap rate. The Venezuela palm requires four years to attain the fruit-bearing period, after which time its producing power is enhanced year by year, until its full maturity is reached, about its eighth year; it then produces for forty years. From 75 to 100 trees are planted to the acre, yielding fully 300 to 350 coconuts per annum. The profit of the small producer is not less than about 4s per tree per annum. The large gower, handling and shipping his fruit, would, it is said, double that figure. The palm, while a tree of exquisite beauty, yields one of the most nutritious and useful fruits known; as an article of food, it is greatly relished; industrially, its principal use is in the manufacture of an excellent quality of soap, the coconut oil being preferred to fat because of its ability to absorb much more water than the latter. The husk of the fruit is now used as fuel; and on this point the United States Consul says it would seem that, in countries such as Venezuela, where carpets or other woollen or cotton floor coverings are discarded, and nothing but imported mattings used, the manufacture of the fibre of the husk into cocoa matting on the spot would prove profitable.—*H. and C. Mail*, April 17.

BRITISH RULE CENTENARY IN CEYLON.

(Extracts from Mr. Justice Clarence's Paper.)

THE PLANTING INDUSTRY.

I pass to the rise and development of the planting enterprise, which the opening up of the country rendered possible.

Coffee had been cultivated to a small extent under the Dutch, and then allowed to decline in consequence of Java producing more than was thought needful. A little lingered on to our own times, and when the country had been opened up it attracted the attention of Englishmen with money to invest. In 1824 the first European coffee estate was opened. The enterprise grew, and about 1837-40 there was a great rush into coffee. The planting extended rapidly, passing through periods of inflation and depression, until much of the hill jungles had been transformed into trim plantations.

The land once cleared by Sinhalese axe-men, the actual coolie labour for cultivation was drawn from the Tamil districts of Southern India, and without this singularly convenient labour supply, cheap, docile and ready to hand, the enterprise could never have attained such success. Mistakes were sometimes made in opening land which proved unsuitable, but in the main the enterprise prospered, and the clearings climbed higher and higher up the roof of the island. The railway materially aided the planters.

About 1873 coffee-planting attained its real zenith, and then followed a period of unnatural inflation. A wild gambling speculation set in. Then disease attacked the coffee, and the unnatural inflation rendered the downfall all the more disastrous. About 1879 the fall was headlong. In 1882 the export had sunk from over 1,000,000 cwt. to about one-fourth. The planters and their creditors were at their wits' ends. The Courts were crowded with creditors, including mortgagees vainly seeking to realise. Estates went for nominal prices. Superintendents lost their salaries, and even coolies their arrear of wages at eightpence or ninepence a day. There were estates on which (excepting the weekly advances of rice for food) the coolies' wages had not

Yet the great mass of the planters never lost heart. Liberian coffee was tried, but with small success. Cinchona was introduced and prospered for awhile, saving many from sinking. Then disease and a fall in the price of the bark attacked that industry. Even then the planters were not to be beaten. They turned their attention to tea. Dead or dying coffee was cut out, and the land planted up with the new product. The planters had to learn, and then teach their employés, and entirely new industry, a new system of cultivation—*plus* the new processes of plucking the tea-leaf and working it up into made tea, a work requiring intelligence and unremitting attention. Fresh capital was needed for the new planting, as well as for expensive tea-making machinery. All this was successfully accomplished, and for many years now the tea has been thriving and paying its owners well throughout great tracts of land, including not merely the districts in which coffee once flourished, but others in which coffee was tried unsuccessfully, and also entirely new districts opened in the lowcountry. It would be difficult to speak too warmly in praise of this remarkable achievement. The success was won by a singular combination of dogged perseverance with alert and adroit enterprise in new departures, aided by the resolute and cordial manner in which the planters worked together for their common advancement.

That the stream of Tamil coolie labour from India should have returned after the crisis of 1879 argues two things. First, the poverty of the coolies in their Indian home, and secondly, that on the whole they are fairly treated by the planters.

Since tea-planting was extended into the lowcountry, Sinhalese villagers have shown more disposition to come in and work on the estates as coolies, though in an intermittent manner. Yet I doubt if the Sinhalese, who are attached to their own village life, will ever furnish a large labour contingent to the planter.

A little coffee lingers in diminishing amount. Cacao succeeds well within a restricted area. Tea, so far, has been a persistent and increasing success. Whether this success will endure, or whether tea will some day share the fate of coffee, who can say? There may hereafter be difficulties to surmount in the way of labour supply and fuel; but the poor soil and forcing climate seem more favourable for a leaf-product like tea than for a fruit-product such as coffee. At present there are absolutely no signs of a falling-off in the production. More than 300,000 acres are now under tea.

Excellent and meritorious as this planting enterprise is, its value to the native community may be, and often is, exaggerated. It is essentially a European enterprise, and its benefits in the main are for Europeans. The profits go to Europe, and are not invested in the island, and the larger part, though not the whole, of what is paid out by the planter goes to the Indian coolies and not to natives of the island.

MR. J. L. SHAND:— * * * As regards the development of the country by the planting enterprise, Mr. Clarence has spoken pretty accurately up to 1873; then, he says, the wild gambling speculation set in. Now I was connected at that time with the planting enterprise, and I object to being set down as a wild, gambling speculator. Facilities for expanding the enterprise by the aid of borrowed money were everywhere opened up, money was sent out from home, banks were ready with advances; what a miserable creature a man would be, under these circumstances who did not take advantage of them! The enterprise came to grief by a mysterious fungus which attacked our coffee, and that, and that alone, was the sole cause of the failure of the coffee enterprise. I do not think there was any gambling or any wildness in that speculation at all. Then he draws rather a gruesome picture of our unfortunate circumstances at that time and lays what I think is undue stress on the fact that on some

estates labourers had their wages set back a few years. Now that sounds very dreadful, but there the food is really the only necessity of life which our Tamil labourers have ; they live in perpetual summer, their children do not require any shoes, and food and food alone is the only thing really necessary to their existence. Any surplus money they use for arrack or melt down into ornaments for their wives and daughters or other female connections. I know many cases thus in which wages not being settled for 2 years was a mere figure of speech. They practically received 4-5th of their pay in food and advances for dry fish and curry stuffs. Depression set in and we were obliged to control our expenditure, and the manager called his men together and said he could not keep them at work for more than 3 or 4 days in the week, would they like to go? and they said "no, you give us food and we will stay here till good times come back." Then Mr. Clarence might have referred to English proprietors who went back to Ceylon and put their shoulders to the wheel and did their very utmost to meet their responsibilities to the labourers, and in 99 cases out of a hundred, the Tamil labourers did not suffer at all. Mr. Clarence congratulates the planters on certain things and one of them is that the immigration of Tamil labour was resumed and the labour relations *on the whole* became once more *fairly* satisfactory. Now I dwell on these words because in no country in the world have we such a perfect labourer as the Tamil cooly and more pleasant labour relations than they are now on the Tea Gardens of Ceylon. Then we are told about the profits which go to the English and the Indian coolies and not the natives of Ceylon. If Mr. Clarence went back, he would find that a very small portion of the British Capital has ever come back to India, and that Indian natives circulate their wealth through the island and spend it in the development of other native industries! So much has it been the case that very little British Capital returned home that I remember the common old riddle used to be "Why are the Kandian hills like Westminster Abbey?" Answer. Because they are the graves of so many British sovereigns! * * *

MR. J. FERGUSON :- Lord Loch, Ladies and Gentlemen,—I must express my hearty appreciation of the able way in which the learned lecturer has endeavoured to compress into so small a space, so readable, useful and suggestive account of one hundred years of British rule in Ceylon. As a journalist and bookmaker in Ceylon myself, I know the difficulties attending such an effort. It was to be expected that as lawyer, judge and ex-editor, Mr. Clarence should be strongest and most suggestive in respect of legislation and administration of justice. But under other headings his paper calls for criticism and though neither judge nor planter, I must confess there was reason for much that was so eloquently expressed by Mr. Shand ; for, I cannot but take exception to the picture presented of the general progress of the island and its people and of the influence on the latter of the planting enterprise. No doubt to anyone going to Ceylon now,—or even so far back as the first year (1873) of Mr. Clarence's arrival,—it is not easy to realize the marvellous change which has been effected in large districts if not several provinces solely through the planting enterprise. In one part the lecturer quoting from the history of the early part of the century admits much by stating there were no towns in the interior of the island. Now-a-days the visitor travelling by rail and admirable roads past towns and villages from the sea coast to Kandy, Matale, Nuwara Eliya, Badulla, and finding the planters working apart in their own districts, might suppose the native towns and villages and indeed much cultivation to have been always there ; whereas the fact is that nearly all we find of towns and villages in the Central and Uva, much of the Western and Sabaragamuwa and even Southern Provinces—where two-thirds of the population are concentrated—is the outcome of the influence of, and the capital and prosperity introduced by, planting. The best way of proving this is by quoting evidence much older than that of Mr. Clarence: the celebrated Orientalist and Missionary Spence Hardy worked from 1825 to 1845 in Ceylon and then left and returned in 1863. He was a true friend of the natives if ever there was one : he worked in the Western, North-Eastern, Central and Southern Provinces. He wrote the charming Jubilee Memorials of his Mission in 1863 ; and what did he say of the change in the condition of the natives :—

"Were some Sinhalese *appuhami* to arise who had gone down to the grave 50 years ago, and from that time remained unconscious, he would not know his own land or people and when told where he was, he would scarcely believe his eyes, and would have same difficulty with his ears Looking at his own countrymen, he would say that in his time both the head and feet were always uncovered, but that now in the towns they cover both, or perhaps he would think that the youths whom he saw with shoes and stockings were of some other nation. He would be astonished at the heedlessness with which *appoos* and *naidas* roll along in their bullock bandies, passing even the carriage of the white man, whenever they are able, by dint of tail-pulling or hard blows. He would perhaps complain of the hard road, as we have heard a gentleman from Kalpitiya do, and say that soft sand was much better. He would wonder where all the tiles came from for so many houses, and would think that the high caste families must have multiplied amazingly for them to require so many stately mansions. In the bazaar he would stare at the policemen and the potatoes and the loaves of bread and a hundred other things no bazaar ever saw in his day. He would listen incredulously when told that there is no rajakariya or forced labour and no fish tax, that there are no slaves and that you can cut down a cinnamon tree in your own garden without having to pay a heavy fine." My lamented senior, the late Mr. A. M. Ferguson, landed in Ceylon in 1837; and I often heard him speak of the utter want of trade and life in Colombo with only a sailing ship or two in the harbour, and the absence of trade, and industry or comfort throughout the island over a great part of which he travelled in the "forties." Then we have now returned colonists like Mr. M. H. Thomas who recall their first ride North of Kandy in the "fifties" by a route without road, bridges over rivers village life or cultivation, where now there is alongside a first-class road, one long row of villages and continuous *native* cultivation, all fostered through the influence of the Planting Enterprise. In my own case I had the honour, as journalist and reporter, to accompany Sir Hercules Robinson when our Governor, on his first tour through Uva, and the change in the condition of that Principality or Province now and as it was 30 years ago, benefitting both Sinhalese and Tamil people alike, may be all put down to the introduction first of coffee and tea. It is absurd to suppose that only the people (coolies and Sinhalese artificers and servants) benefit

by planting. Apart from the rice and cart contractors and their dependents, the influence of British capital and interest as well as direct employment spreads far and wide. First come the planting district "boutiques," wayside shops, then the village and around this often a good deal of native cultivation in fruit or rice or tea gardens; while it is well-known that a great part of the Western and North-Western Provinces (the whole of the Mahaoya Valley) have been planted with coconuts through the capital diffused among native contractors, traders, &c., by the coffee enterprise in its prosperity. (Hear, hear.) The calculation therefore that I long ago arrived at, after due consideration of all the facts of the case, is, I think, a safe one, namely, that for every acre of coffee, tea, cacao or such like cultivation opened by the British planters in Ceylon (or India or I may add East or Central Africa) four or five natives, Tamils or Sinhalese men, women or children directly or indirectly derive their means of subsistence. * * *

COFFEE PLANTING IN SELANGOR:

THE RECENT WITHDRAWAL OF CEYLON APPLICANTS FOR LAND.

In the *Selangor Government Gazette* of April 24th is printed the monthly report for February of the District Officer of Klang (Mr. W. W. Douglas), from which we quote the following remarks:—

During the month, Mr. E. V. Carey applied for one block of 500 acres on the terms of his agreement with the Government, and four blocks of 320 acres each on the west side of the Sungei Binji Road in the mukin of Bukit Raja. Mr. T. N. Christie applied for one block of 370 acres and a customary holding of 25 acres at Damansara. In the Kapar District, between the Kapar and the trace of the proposed road to Ijoh, there were five applications for blocks of more or less 300 acres each. These were made by Messrs. T. N. Christie, G. W. Welman, W. P. Metcalfe, A. Melville White and J. R. Rodgers.

It is to be regretted exceedingly that Mr. W. Forsythe, the owner of blocks 32, 33, 34, 35, 36, 41, 43, 44, 56, and 57, and Mr. T. N. Christie of block 37, all of which lie between the Jalan Kabun and the Langat Road, have considered it advisable to abandon their estates, known as Datu Dagang, Sempang and Lanka Estates The decision arrived at is attributed to the land having been found peaty and unsuitable for coffee culture. To say that the land would not grow coffee when thoroughly drained is, in my opinion, a grave mistake. From enquiry made of Haji Mohamed Tahir, the pioneer coffee planter of Klang, the former owner of the show piece of coffee, aged some 14 years, and the one man that set the example of coffee culture which has resulted in the district having now 3,224 acres under coffee cultivation and some 2,402 acres about to be opened up, I ascertained that the land on which he first planted coffee was, when first cleared, identically the same as that abandoned.

It is to be feared that very exaggerated ideas of the now supposed worthless Klang land will, in consequence of the lengthy correspondence in the papers on the subject, spread far and wide, and be the cause of keeping away many intending investors of capital. It is, I consider, therefore, due to the district that the facts of the present state of coffee culture within it should be made known generally, as well as the fact that the principal owner of the lands lately abandoned inspected his selections prior to the sale by auction, and on the date of the sale sent instructions by telegram for certain blocks (included in those abandoned) to be purchased.

NOTES FROM NYASSALAND.

MLANGE AND ITS SURROUNDINGS.

March 6th.—As one of the principal planting districts in British Central Africa, it might interest your readers to know something of it. Unlike the hill country of Ceylon, where mountains rise gradually, and the slopes mostly cultivated, Mlange mountain rises suddenly out of the plain, which is on an average of about 2,000 feet, and its sides, especially on the western side, rise like sheer stone walls to some four to five thousand feet. The highest peak is about 10,000, rising off the plateau, which is between 6,000 and 7,000 feet. The plateau is the sanatorium of the Mlange district, or at least will be so, when a road has been made up; at present the ascent, which can only be made in a few places, is difficult, and is a great undertaking, but once the plateau is reached, it recompenses one for the trouble of the ascent, On reaching the top a splendid view burst upon one: in front undulating country something similar to the Horton Plains in Ceylon, short grass land dotted with small prices of pine forest; while below the plain extends as far as the eye can see, and broken in few places only with small hills. Tho small pieces of pine forests on the plateau, which lie chiefly in the hollows are extremely picturesque, the trees being covered with drooping white moss, and the undergrowth consisting chiefly of large ferns and male bamboos. The peaks, which rise off the plateau, are sheer masses of rock with no verdure whatever, and as yet only two Europeans have ever reached the top of the highest peak. The southern side of Mlange is the source of three rivers, the Ruo Luchenia, and Chucheela, the latter two flowing into the Ruo some twenty miles north of Chiromo. The "Ruo falls" down the side of the mountain are a sight, especially during the wet weather, enormous volumes of water dropping some thousands of feet. From the edge of the plateau three plantations can be distinctly seen: Mount Zion, Lauderdale, and the small clearing on the Nyassaland Coffee Company's land. On the northern side of the mountain is the Matapwerry country, which was only acquired a few months ago after the Matapwerry war. On this side tho mountain is not nearly so precipitious, the sides being covered with forest, but unfortunately the elevation is too high for Coffee cultivation, and the plain at the foot of the mountain has been cultivated for years by the inhabitants and consequently is divested of all its virgin forest. Speaking of the latter it must not be imagined that the plain surrounding Mlange is covered with virgin forest. Far from it; there are large portions of land which have been cultivated by natives for years, and owing to the limited quantity of forest land little new remains. The pioneers have had the pick of the land, and have not been slow to get all they could while the price was slow one resident alone owing 7,000 acres of the best land, the Nyassaland Coffee Company coming second with 3,500, and Mr. Carson third with 2,500. There aro now in all six plantations comprising some 700 acres under coffee cultivation, most of which is quite young. The year's crop will only amount to about 45 tons. The next few years are likely to make a great difference, as large acreages will be put under cultivation.

Labor.—Even with tho present acreage under cultivation there is a want of labor, especially during the planting season. Not because there are insufficient numbers in the country, but being entirely due to the nigger being an independant individual—he works when he likes. In many respects they are like the Sinhalese of Ceylon—lazy to a degree and sand only working for short periods when it please them. As long as a nigger has plenty of food and a little cloth to clothe himself, he is perfectly contented; when his cloth is exhausted he works for a month, perhaps two, and then remains idle for the rest of the year. In this district they have no ambition to earn money; cloth and beads are all they require. Local labor, of which there are large num-

bers, seldom work for more than a month at a time. although they get much higher pay if they remain on for three months, so that to depend on local labor is almost useless, as one never knows how many are likely to come. Every Saturday, which is called by the niggers "the day of pay," some people have to be paid off, and the superintendent has then to act the part of a dra.er and doles out calico by the yard. Fortunately there is a yearly native hut-tax—3s. for every hut, and to pay this off the nigger is forced to work a month, for which he receives his tax paper, the money being paid by the superintendent to the district collector; this, of course, considerably adds to the labor supply, and it is to be hoped that the tax will be raised to 6s in the course of a year or two, when the nigger will have to work double the time. There is practically no permanent labor, the Atonga which come down from the lake stay on for for six or eight months, seldom more, but as they have to get extra cloth to buy food, their pay averages about 2d a day; and the Augoni which come down in large numbers during the dry months remain for three months only. Very large numbers are employed yearly in transport work, and as they prefer that to estate work, besides receiving higher pay, they flock to Blantyre from all sides.

And until good roads are made by the Administration, and cart transport substituted, the demand is likely to increase. Although there is a heavy tax, £1 on every ton of goods imported into the country, levied for roads and river dues, there is little to show for it, at least in the vicinity of this district. There is a track to Blantyre and another to Chiromo, but they can hardly be called roads, as in many instances they can harly be distinguished from the surrounding plain, being so overgrown with high grass. The climate of Mlange, although not a health resort, might be a great deal worse. Like all tropical countries when the vegetation is heavy, there is a great deal of malarial fever, especially during the wet season, but a great deal can be avoided by careful living. There are, however, always exceptions to the rule. I know of one resident in Mlange who, for the last five years, has had no fever at all, while on the other hand there has been more than one case of Blackwater fever. Taking it all round, I think, there are many worse districts in the low-country of Ceylon, any many experience of the fever is that it is not so bad as the Ceylon low-country intermittent fever. It has, however, scared more than one Ceylon planter away from the conntry; but still I hope to see others coming, as it will tend to relieve the dreadful monotony of the lonely life out here. At the same time I would not advise men to come out on spec; bnt with a small amount of capital, they would probably do very well, provided they have pluck and energy. C. M. G.
—Local "Times."

TEA IN AMERICA.

New York, April 1.

A very quiet invoice and line trade, with the market steady and without new feature. The growing use of Ceylon and Indian tea is the noticeable feature of the season's business.

Last week the Montgomery Auction and Commission Company sold 6,200 packages teas as follows: Moyune—143 Hyson 5½ @ 6¾c.; 523 Young Hyson 7½ @ 26c.; 232 Imperial 6¼ @ 17c.; 493 Gunpowder 9½ @ 34c. Pingsuey—71 Imperial 11½c; 585 Gunpowder 8¾ @ 17c. Japan—180 basket-fired 14½ % 17c.; 1,559 Congou 9 @ 17c.; 169 India and Orange Pekoe 13½ @ 20c Oolong—220 Amoy 7¾ @ 9c.; 2,085 Formosa 13½ @ 21c.

Today at noon the Montgomery Auction and Commission Company will sell 7,264 packages, viz.: 2,331 half-chests Meuyne, including celebrated chops; 1,342 boxes Pingsuey; 59 half-chests Japan, choice; 175 half-chests Japan, basket-fired—very desirable fancy leaf; 1,190 half-chests Congou, including some strictly fancy Ning Chows; 21 boxes Capers; 286 packages India, Java and Ceylon Pekoe, comprising some fancy lines, and including 107 packages Ceylon G ns and Ceylon Siftings; 45 half-chests Amoy; 50 half-chests Foochow; 1,837 half chests and boxes Formosa—a very attractive offering, all new season's and including a complete invoice of 731 mats, boxes and half-chests of strictly fancy new season's.—*American Grocer.*

HOW DUTY AFFECTS TEA.

The tea importers in urging the Congressional Committee upon Ways and Means to impose a specific duty upon teas, a moderate rate upon the pure and a prohibitive duty upon all that is colored and adulterated, take the position that the change would be a blessing to every consumer and particularly to the poor, who are the principal consumers of low grades, which bear the same relation to the good article that the coarse, outside, ground-trodden, worm-eaten leaves of the cabbage bear to the crisp and nutritious head in the center. It is argued that the imposition of a duty would resnlt in an improvement of the quality of the tea exported to this country and that it would not only be a great advantage from a sanitary point of view by keeping out the poor grades, but would bring a large revenue to the government. The importers assert that good tea is a great deal more economical than the cheap grades, regardless of the difference in price; that the nourishing properties increase very rapidly as the quality of the tea improves and that the alkaloid therein, which is craved by all the human race, does not appear in the low grades to the sufficient extent to satisfy that craving. Therefore tobacco, snuff, morphine and liquor are resorted to. It is shown by statistics that there is far less intemperance in liquors, tobacco and opium where good teas are used—*Interstate Grocer,*

TEA IN AUSTRALIA.

In China tea, sales have been made of 100 half-chests panyong at 5d., 200 half-chests fine panyong at 8d., 300 boxes fine panyong at 8½d., and 300 quarter-chests S.O. pekoe at 6½d. In Ceylons, 290 packages have been sold at 6d to 8d. Of Indians, 140 packages have been sold at 7d to 8d. At the auction sales on Tuesday there was good competition, and steady prices were realised. Of China. tea, 1,530 half-chests were offered, and sales were made of 782 heavy-weights and 184 light-weights at 4d to 6d. The quantity of Ceylon tea offered was the largest which has yet been offered at auction on any one occasion in Melbourne. The catalogues amounted to 954 chests and 367 half-chests, and the quantity sold was 659 chests and 353 half-chests, as follows:—Orange pekoe and broken orange pekoe, 53 chests and 27 half-chests at 9d to 9¼d; broken pekoe, 175 chests and 93 half-chests at 7¾d to 1s 0½d; pekoe, 363 chests and 152 half-chests at 6d to 10d; pekoe souchong, 57 chests and 68 half-chests at 5½d to 8¾d; souchong, 11 chests, and 13 half-chests at 4½d to 5½d.—*Australasian* April 8th.

THE TEA TRADE OF FORMOSA: THE JAPANESE AND CHINESE CUSTOMS.

"Merchant" writes to the *Foochow Echo* saying that he is informed on good authority that the Japanese Customs in Formosa are now collecting export duty on Tea at the rate of $1.12 per picul, and the tea is received and allowed to be exported from Amoy *free*, while the native-grown article has to pay an export duty of $3.84 per picnl. In commenting on the news the *Echo* draws attention to the grave importance of this statement. "Of course," it says, "it touches most nearly the shippers of Oolong tea from Amoy and this port to America, where this description of tea is chiefly consumed; and in a less degree the general shipper. Assuming that the Chinese will do nothing in the way of assimilating their duties with those of Formosa, the Chinese teamen will have to reduce their prices, or be prepared to hear the buyer say: 'I am quite willing to offer you Tls. 17. for this string chop, less Tls, 1.90, to

place me on the same terms as Formosa shippers as regards duty.' Unless something can be done it is patent that the tea trade in Formosa will increase very considerably while that in China will correspondingly decrease."—*N.-C. Herald*, April, 17.

CAMELLIA THEA.

(From a paper by Mr. D. O'Sullivan, read before the Pharmaceutical Chemists' and Apothecaries' Assistants' Association of Ireland.)

Tea is referred to by Confucius (550 B.C.), and by Yo Lu (618 A.D.) as having been taxed at the later date, showing that it was then in general use. In the seventeenth century tea was sold in England at 60s per lb. It was then known as "chaw"; at that time the yearly import under 100 lb. In 1891 the figures were over 91,000,000 lb. per annum for the British Islands alone. Green and black tea contain 26 per cent and 15 per cent of tannin respectively. Green tea causes giddiness and numbs the cerebral nerves, acting as a powerful brain-irritant. Tea alkaloid resembles strychnine in its effects. An injection of caffeine causes tetanus in the frog. In Northern Russia "brick tea" is meat and drink to the people, who first drink the infusion and then eat the leaves with mixed fat.—*Chemist and Druggist*.

PLANTING IN PERAK.

From the annual report (for 1895) of Mr. A. T. Dew on the Matang District, in the *Perak Government Gazette*, we quote the following:—

Estates in Matang.—Coffee.—There is a present only one estate under coffee, that of Mr. F. A. Stephens, at Jibong, of 640 acres, of which about 150 acres have been cleared and 90 acres planted up.

The young coffee, Liberian, appears to be doing very well, and has been favourably reported on by several exports who have visited the estate.

There is also another estate of 640 acres adjoining Mr. Stephens' estate, on which work has just commenced, that of Mr. Allinson.

An application has also been received from Mr. C. L. Gibson for 640 acres of land in Sungei Tinggi mukim for coffee planting.

Sugar.—Messrs. Stewart & Kennedy have taken up 2,500 acres in Selinsing for sugar planting and the work of clearning will commence early in 1896.

A Manila man, Peter Madrigal, has a very well kept little estate of about 35 acres in Jibong, adjoining that of Mr. Stephens, which produces almost everything that can be grown in Perak. Liberian coffee being the principal article of culture.

He is probably the pioneer coffee planter in low, swampy ground in the Peninsula, and it was the flourishing condition of his coffee which induced Mr. Stephens to open an estate at Jibong.

TRINIDAD ROYAL BOTANIC GARDENS.

From the Annual Report of the Superintendent for the year 1895, which has reached us, we extract the following:—

CACAO.

It will be remembered that young plants of the Nicaraguan Cacao were imported in 1893, so that in July 1895, they were two years old. Shortly after this period several of the plants produced flowers, b t none have as yet produced pods, our tallest tree being about 8 feet in height. One of the plants of Ceylon Cacao that was imported about the same time, has also flowered, and has now, at the time of writing, (December 1895) two small pods set upon it. This has long been desired for comparison with our own varieties, and to enable our planters to know really what the classing of the Ceylon kind should be in comparison with their own produce. The health of the trees of the Nicaraguan and Ceylon varieties is everything that could be desired.

Of the number of plants of *Cacao bicolor* only one is growing vigorously; but several others are growing slowly, and may do better later on. The plants of *Theobroma angustifolia* are doing well, and I trust will, in a few years be large trees. During the year, a case of the Nicaraguan varieties was successfully forwarded to the Royal Botanic Gardens, Peradenyia, Ceylon. These plants were a part of those brought by the Superintendent from Nicaragua in 1893.

COFFEE.

Our experiments with coffee during 1895 were principally directed to showing cultivators the best method of culture and mode of pruning for the ordinary *Coffea arabica*. Coffee growing, as carried out in Ceylon, Jamaica, Costa Rica and other coffee growing countries is but little understood by the planting community in Trinidad, and few can yet be induced to plant coffee by itself and for its own yield. Instead the usual course is to put in coffee where cocoa will not grow, or to put it, in fact, in ground that is useless for anything else, or to plant it in desultary manner through and amid other crops, or by the roadside of estates.

It cannot be expected that coffee planted and treated in this manner will thrive or pay the grower, even for the small amount of care he devotes to it.

To show what could be done, the culture of a small section of coffee trees in the Royal Botanic Gardens, was pers nally undertaken by the Superintendent, the Jamaica system of pruning and culture was fully adopted, and the trees kept down to a certain height. Although the practice only commenced eighteen months ago, the trees now bear evidence that the mothod we have adopted is one which should be followed if true success in coffee culture is to be the ultimate result. Trees under this system have given over four pounds, and one tree gave over seven pounds of clean coffee.

Lectures were given on the system during the month of August, and the trees were seen under crop by those gentlemen who attended. Later in the year I was invited to the Santa Cruz district to see the working of a small machine, which had been imported for pulping coffee, callod the "Columbia pulper,' manufactured by Messrs. J. Gordon & Co of London.

I found coffee was being grown on this estate in direct compliance with the instructions lain in the Departmental Bulletin, No. 11, July 1891, and in December, 1895, good crops of prime coffee were being reaped. The little machine was doing excellent work in pulping the coffee, and they had in use also, a small "Smouts cleaner and polisher," manufactured by the same firm It was evident that these two machines are all that planters require for a small number of trees, and that by their use Coffee can be prepared in an excellent manner.

Coffea stenophylla. From seed of this new variety of Coffee, sent to the Gardens from Kew, a number of plants have been raised. Some of the larger plants have been planted in permanent positions, and are now over three feet in height. and, it is expected will flower in a few weeks, for the first time.

VANILLA.

In December we harvested a small quantity of Vanilla from the plants of Sion House and Mauritius varieties, *Vanilla planifolia, And.* On one bunch we ripened (51) fifty-one "beans" or "pods," weighing considerably over one pound when cut from the plant. The bunch of flowers from which these were produced were hand fertilized by Mr. Lunt, the Assistant Superintendent.

The quality of this Vanilla leaves no doubt that it is the best variety or species obtainable for West Indian cultivation.

RUBBER.

The demand for plants of *Castilloa elastica*, the Central American Rubber is increasing, and we have sold all we could raise. The tree thrives well in Trinidad, and I trust ere long that we may have an account of the actual yield of trees ready for publication, for the further guidance of planters.

J. H. HART, F.L.S.
Superintendent Royal Botanic Gardens.

CHINA *VS.* INDIAN AND CEYLON TEAS.

The heavy blows, military and financial, under which China has lately suffered do not seem likely to be atoned for by any great expansion in her staple industry, the tea trade. On the contrary, the rivalry of India and Ceylon, especially the former, is growing more formidable year by year. That the growth of the Indian tea trade is not based entirely on the excellence of the product, but is in great measure an illustration of the trite maxim that "trade follows the flag," is established by the fact that some ninety-two per cent. of the entire Indian export of tea is shipped to the United Kingdom. In the colonies and America, where tea-drinkers who can appreciate fine shades of quality are comparatively few, the Chinese product still holds its own, though in the United States and Canada the Indian trade, though as yet comparatively small, has of late years developed very rapidly. New markets for Indian tea are being opened up, however, in the Persian Gulf, in Asiatic Turkey, and even in Asiatic Russia, the import at Bandar Abbas in particular being last year double that of the previous year Such facts as these offer a most encouraging prospect to all interested in the great Indian Cingalese tea-growing industry, which now occupies so commanding a position in some of the greatest tea markets in the world. How far the prospects of Indian tea in Russia, which is one of the greatest tea-consuming countries in the world, will be affected by the construction of the great Siberian railway cannot at present be foreseen, but unless Russian tariff arrangements prove prohibitive, an inexhaustible field for extension should be opened *via* Batoum and the Caspian Sea. Notwithstanding that a good deal has been said in trade circles of the gratifying revival of the last year or two in the Chinese tea trade, there seems every reason, therefore, to anticipate that the Indian product will not only hold its own, but will experience a steady growth in popularity throughout the world, with a corresponding advantage to its producers and to the great British dependency in which it is grown.—*Liverpool Post*, April 13.

UNITED STATES IMPORTS OF COFFEE, 1895.

The above table,* compiled by Worthington C. Ford, Chief of the Bureau of Statistics, Washington, D. C., affords a graphic and interesting history of coffee in the United States for ten years past. It will be noted that the total imports for the period do not indicate a remarkable increase in supply, for the imports in 1895; were only 11,993,187 pounds more than in 1892; 73 811,521 pounds more than the imports in 1889, which were only 13,689,921 pounds more than in 1886. Some countries, however, show a marked development of the industry, but the total supply does not show differences greater than would naturally arise from variations in crops. The general drift, however, is toward increasing supplies. Note, again, that the per capita consumption in 1886 was 9.36 pounds, against 9.20 pounds in 1895: while in 1692 it was 9.61 pounds. In 1888, a year of short crops, it dropped to 6.81 pounds.

A significant fact is that while Java coffee is sold everywhere. the total imports of coffee from the East Indies and the Netherlands were 17,895.525 pounds, or 2.7 per cent of the total imports. Evidently a supply of Java from some other countries is required to meet the demand.

During the ten years 1886-95, Costa Rica has increased its exports to this country nearly fourfold, or from 4,750,594 pounds to 17,332,632 pounds; Salvador has doubled its exports to the United States, and Mexico has more than doubled, the imports in 1895 being 35,262,229 pounds, against 15,764,902 pounds in 1886. Honduras has more than doubled. but Guatemala furnished only 2,889,113 more than in 1886 and only 584,384 pounds more than in 1887. Possibly the import tax levied under the Reciprocity Act sent considerable Central American coffee to Europe. The supply from Brazil has been very irregular, dropping to 240,179,011 pounds in 1888, and reaching its maximum export to this country in 1892. It is evident that there is considerable coffee shipped and reshipped into Europe that finally finds its way into consumption here. The tables* themselves afford amply study for such as are interested in keeping posted about the coffee supply.—*American Grocer*, April 1.

* Not reproduced.—ED. T.A.

INDIAN PATENTS.

The fees prescribed have been paid for the continuance of exclusive privilege in respect of the undermentioned inventions for the periods shown against each :—

For improvements in the method of an apparatus for drying tea leaf.—No. 80 of 1888.—Henry Thompson, engineer, of Trinity Street, Gainsborough, in the county of Lincoln, England, for improvements in the method of an apparatus for drying tea leaf. (From 17th April 1896 to 16th April 1897.)—*Indian & Eastern Engineer*, May 2.

CEYLON TEA IN AMERICA.

THE VIEWS OF OUR DELEGATE.

Through the courtesy of the Chairman of the Planters' Association we are able to publish an interesting and important letter from our Tea Delegate in America elsewhere, and we trust that from planters and merchants it will receive the most careful consideration as coming from one who, in accordance with his commission, has made it his special business to study everything that tends to hinder, as well as all circumstances that are calculated to promote, the sale of our teas in the American market. Mr. Mackenzie writes cautiously, being anxious that "views," "surmises" and "opinions" should not be taken for facts which are difficult to get a hold of. It is because he is so cautious and so keenly observant that the planting community have so much faith in him as their delegate, and great weight will therefore be attached to all that he writes and reports regarding the ways and means of increasing the sale of our staple product in the great Western Continent. The progress we have already made is indeed gratifying, and the closing part of Mr. Mackenzie's letter in which he states "the sediment of fact" that there are many more dealers handling our teas pure and in blends than there were a year ago, and that "all are pushing energetically in the various methods Americans adopt," affords very reasonable ground for the hope, at all events, that there will be no falling-off in the rate of progress, if it is not increased by acting on the suggestions which are made as to green teas, for millions of pounds of which a ready sale can be found, and as to transhipping at London should the values based on samples sent a week before the teas leave Calcutta or Colombo, and wired from New York, be higher than the values placed on duplicate samples in London. We commend this part of Mr. Mackenzie's communication particularly to the consideration of shippers, and we shall be glad to hear whether they are prepared to give the plan a trial at least. Commenting upon the large increase in the imports of British-grown machine-made teas into the States and Canada last year our delegate is of opinion that this is attributable to the low prices which ruled having led to buying in excess of requirements; and there can be no doubt that if there is still any large quantity remaining unsold this will tell against the imports in the early months of this year; but, as we have already said, the energetic manner in which our interests are benig attended to leads us to believe that our progress will be well maintained.

THE CEYLON ROYAL BOTANIC GARDENS.

A somewhat melancholy interest attaches to the report on the Royal Botanic Gardens for 1895, it being the last one to which Dr. Trimen's name will be appended—for, as our readers are aware, and as a note to this report states, he will retire from the post of Director, which he has so well filled for the past sixteen years, at the end of next month. For the greater part of 1895 Dr. Trimen was absent on leave in England; but, as he testifies, the work of the whole department was efficiently carried on by his lieutenant Mr. Nock, in addition to his own duties at Hakgala. Mr. Clark, the head gardener, having resigned, in order to enter on a planting life, his place was filled by the appointment of Mr. H. F. Macmillan from Kew. Surely the services of Mr. R. H. Pereira might have been preserved to the department by an increase of salary: but such are the ways of redtape! It will be noticed that the drawbacks to be contended with at the Peradeniya Gardens are, according to the Director, "bad soil and want of manure." The former is an inherent evil, which can only be overcome by a free use of manure: and this, of course, means considerable expense. Various improvements to the Gardens are mentioned: and we hope that the childish and vulgar habit of scribbling on the Gardner cenotaph will be put a stop to by every dossible means. The extracts given from Mr. Nock's report on the Hakgala Gardens are of much interest; and we would draw special attention to what he and Dr. Trimen say with respect to the great injury and loss to the department resultant to the pernicious practice of growing plants for sale to the public. Government has no right to compete with private nurserymen in this matter. The enormous spread of the oxalis weed is a serious affair; and we hope that some means will be found for eradicating it cheaply. Other enemies mentioned are monkeys, sambhur deer, elephants, and ——visitors! As these last are supposed to be animals with a conscience if not honesty, their depredations are the least excusable of all. The Henaratgoda Garden is energetically and intelligently supervised; and we are glad to note the large increase in the number of visitors. This might, however, be still further augmented if greater facilities for visiting these gardens were offered by the Railway Department to strangers. The headman who tried to make a public road through the garden deserved suppression as much as his cheeky attempt. The report on the Anuradhapura Garden is calculated to make our Government blush with shame, if they are capable of such a feeling. We hope Dr. Trimen's indignant words will not be lost on them. The Badulla garden also seems to be studiously neglected by Government. The notes on economic plants are, as usual, interesting and valuable; and we would call the special attention of our planting readers to them,—in particular to what is said about coca. We have thus briefly referred to some of the salient points in this interesting report: but we recommend to our readers the careful perusal of the extracts which we give as a Supplement.

A REMARKABLE COFFEE TREE.—It is stated by the *Rio News* that in the vicinity of Brejoes there is a twenty-year old coffee tree which, according to the *Luz*, of Areias, produced last year sixty pounds of coffee. The tree is so tall that in gathering the co[ff]ee a ladder has to be used.

THE DIMBULA VALLEY CEYLON TEA COMPANY, LIMITED.

We hear that the sale of Elgin and Kelliehill to this Company is to be put through at the prices they were sold for, and this, we take it, indicates that Sir John Muir has withdrawn his objections to the sale; and if we are right in our surmise we would congratulate all parties on a settlement of what looked like a huge law suit

---

THE KOSHENA COCONUT ESTATE CO., LTD.

The annual general meeting of the above Company, called for 2nd instant, but postponed owing to the non-attendance of a quorum has since been held. The following is the Directors' report:—

In presenting the accounts for the first year, the Directors have only to state that the property is rapidly increasing in value, it being carefully cultivated, and that when the Vendor's guarantee of 5 per cent dividend comes to an end (which it will in the course of another year) the Estate, it is believed, will be producing sufficient nuts to earn a handsome dividend

The Vendor's guarantee of 5 per cent on the paid up shares will be paid on 15th May.

It will be necessary to appoint an Auditor for 1896.

By order of the Board of Directors,

C. E. H. SYMONS, Secretary.

The report was adopted, and Mr. John Guthrie was appointed Auditor for the current year.

THE PATIAGAMA PLANTATION COMPANY, LTD.

The following is the report of the above Company intended to have been presented at a meeting on Saturday which however was postponed owing to the non-attendance of a quorum:—

The Directors herewith beg to submit their fourteenth Annual Report.

The estimate of tea for the past year was 55,000 lbs.: but the actual crop has fallen somewhat short of this quantity, being only 53,695 lbs., which was sold in Colombo at an average rate of 49¼ cents per lb.

On a reference to the annexed account, it will be seen that the actual working of the year shows a small margin of R2,253·46. The Directors recommend that the balance now at credit of profit and loss account should be appropriated in reduction of Suspense Account, which represents the loss incurred in working the estate previous to 1890 whilst the tea was coming into bearing; and they trust the shareholders will approve of this recommendation.

The shareholders have to appoint a Director in place of Mr. Stanley Bois, whose term of office has expired; and it will also be necessary to appoint an auditor for 1896.

DRUG REPORT.

(From *Chemist and Druggist.*)

London, April 16.

CINCHONA.—The monthly auctions held in London, on Tuesday, were somewhat remarkable for the fact that Ceylon bark was entirely wanting. This shows, perhaps better than anything, the degree to which the island is now played out as a bark-producing country.

ESSENTIAL OIL.—Citronella offers 1s 7d per lb. on the spot, which is easier.

SEEDS (various).—Five bags fair areca sold at 12s 6d per cwt. For fair Spanish anise 30s per cwt. was paid ordinary Russian sold at 17s 6d to 19s per cwt. Annatto in large supply. For good bright W. Indian 4d per lb. was refused. Fair to ordinary dull Ceylon realised from 2d down to 1¼d per lb. Croton-seed is again dearer: 10 bags dark mixed Ceylon realised 65s per cwt.

[over.]

WHITE ANTS ON TEA ESTATES.

The first instalment of Dr. George Watt's paper on white ants, which is understood to be one of the chapters of his forthcoming Tea Report, has just been published, and though it deals with the ravages of these pests in Kangra and Assam in particular, the information imparted and the conclusions arrived at cannot but be of interest to tea planters in all parts of the country. Dr. Watt states that entomologists have not determined how many species of *Termes* (white ants) India possesses, but that they would seem to be numerous. In regard to their modes of life they are diversified, some raising castellated, others rounded, others superficial structures above ground, some living in cavernous excavations underground, some existing in vast colonies, some in isolated communities. Here in Madras we seem to have every variety, for what garden is not defaced by the unsightly mounds raised by these persistently destructive termites, what hedgerow not honeycombed by their marvellous efforts, what tree not encased more or less with their mud ways. They are ubiquitous, and they do not, unfortunately, confine their predatory excursions to the gardens and hedgerows, but invade the dwelling places of rich and poor alike, eating their way through walls, beams, rafters, mats, etc., in defiance of their enemy man, who is too frequently blissfully ignorant of their hated presence. Things are bad enough in Madras, but they seem to be worse in Assam, for Dr. Watt states that it would be very nearly impossible to dig a trench anywhere in that province without exposing several of the remarkable excavations—caverns 1 ft. to 2 ft. in size—made by the smaller white ants that live entirely under-ground, and particularly among the roots of bushes. These, we fancy, are not unknown in Madras; at all events there is a species of white ant here which runs up a short covered way above ground, in the grass or on the footpaths, and which excavates caverns filled with the curiously reticulated structure referred to by Dr. Watt and compared to the combs of a beehive. The writer of this has noticed that the working members of this species while forming the covered ways above ground are almost invariably attended by several guards, or what may be described as soldier ants, much larger than the workers, with big, bright brown heads and immensely strong nippers. They become most ferocious if disturbed, and when a piece of grass or other soft substance is held close to them, they will rush at it and seize it, holding it as in a vice, at the same time, when seemingly quite beside themselves with passion, exuding a bright bluish fluid from the region of their nippers.

In referring to the mud encasements, the work of white ants, Dr. Watt says that it is hard to believe that trees and shrubs are not injured thereby. If this coatings of mud are removed it will be seen that the bark underneath is paler than that which has not been encrusted, this being due to the superficial and drier layer having been eaten away.

"It is a very generally accepted opinion," Dr. Watt goes on to remark, "that white ants will not eat living and growing wood, and consequently that they do not kill, though perhaps they injure living plants to a certain extent. But there can be no doubt that white ants, if permitted to take up their abode for some time in and among the roots of a plant, do incalculable harm," for in their excavations they remove the earth from the roots, which thus exposed form bark. But we will let Dr. Watt speak for himself:—

"Speaking of tea bush, it is by no means an unusual state of affairs to find the plant growing as it were on the summit of a dome of hardened earth that surrounds the cavernous dwellings of its colony of termites. A section made by means of digging a trench, for three or four feet deep, across the space occupied by the bush and hard against the main stem, will reveal a most unhealthy state of affairs. At a depth varying from one to three feet a large central cavern will be found, and fringing this numerous smaller ones. In fact, an elaborate system of excavations will be revealed and found to be occupied, like the Roman catacombs of old, by both the living and the dead. The roots that stretch across the larger caverns will be seen to have formed bark and to have assumed to all intents and purposes the condition of branches. The delicate absorbing fibrils will be observed to have also disappeared, so that it needs little explanation to enforce the opinion that there has been a useless accumulation of plant energy below ground at the expense of leaf production above." In addition to this, the effect of the excavations is to cause a serious disturbance to the drainage of the soil and to its powers of retaining moisture, and Dr. Watt urges tea planters, when white-ant encasements on tea bushes are discerned to attend to the trees immediately if they do not wish them to die off. Dr. Watt is convinced that white ants can and do attack living plants, and for the following reasons:—

"Let the mud encrustations of the bark be carefully removed and follow the ant roadways upwards until the stump is reached of a withered branch or the scar from which it was wrenched, and the observer will witness how white ants gradually devour and ultimately kill living plants. They will be seen to have eaten, or nearly so, the whole of the severed portions, but having found a passage through the external zone of living and growing structures, have begun to attack the fully formed wood. They have deposited a dense coating of mud within the gaping wound and splintered timber with the two-fold object of preventing the process of healing and of supplying an absorbent plaster that will suck the moisture from the wound and transmit it to the air. In a very short time a layer of the wood will be thus killed and rapidly devoured. Layer upon layer follows, until the stem is cut into very seriously, if not entirely severed. The circulation of the sap having been thus intercepted, these mining engineers turn upwards into the dead and dying wood. Operating below ground and thereby diminishing the supply of moisture while availing themselves at the same time of every abrasion or injury to the stem or its branches, is it to be wondered at that the process of destruction, though it maybe slow and almost imperceptible, is nevertheless certain in its ultimate result?"

Slow and sure is their motto, and they certainly live up to it. Their patience is as inexhaustible as their numbers and the wholesale slaughter of myriads does not deter them in the least from their fell intent. They do not, however, as Dr. Watt remarks, as a rule, kill the green sapling nor attempt to eat their way through the external zone of green wood of healthy plants, for they live mainly on wood, not on green vegetable matter; but, given a chance, they will sooner or later convert the green wood into dead wood, to the ultimate extinction of all life in the bush. For instance, "let a boring insect make an entrance into the stem, branch or root, and white ants will soon follow. Let the planter prune ruthlessly, leaving large surfaces of torn portions of wood exposed to the action of the air, and if white ants are about they will rapidly cover up his slovenly work with a shroud of mud. The vigorous efforts of the living bark may, however, more or less completely embrace and enclose the scar, but sooner

or later the plant will give clear indications of its cankerous state by ceasing to be productive. The bark may appear quite entire and comparatively healthy. On being probed, however, it will suddenly snap asunder and reveal a mass of mud within a shell of living tissue."

The normal condition of a large percentage of the tea bushes in old gardens in Assam cannot be said to be a pleasant one for the planter, for Dr. Watt states that "hardly a tea garden exists in which the evil effects of pruning, followed, it may be, by the depredations of white ants, cannot be seen," and he goes on to say that it is no uncommon occurrence to find the lower half of the stem of tea bushes gnarled and rotten, with numerous mud stumps representing abortive banches, or having one side only alive, the places of the other side being taken by a great open scar, perhaps mud encased and infested with white ants. Sufficient has probably been said to show tea planters how very necessary it is to look most carefully after their tea bushes, and how cunningly his enemy the white ants will get inside the stems of the tea bushes and be the eventual death of the tree, or very seriously affect the propagation of leaf. "The best protection to the stem," says Dr. Watt, "far and away superior to all insecticides, is a healthy and entire bark with a vigorous sap wood." As the bushes grow older and their wood becomes fully developed, they become more liable to the attacks of white ants. In conclusion, Dr. Watt gives the following opinion with regard to pruning in order to strengthen the plants and to assist them in resisting the attack of white ants:—

"On general principles of tea cultivation I should in any case recommend a fairly early period being fixed for the first heavy pruning, say one year, or, if pressure of work prevent this, two years after planting out, but not later. I should also thin out all the sickly, useless lateral branches and unless, in exceptional cases where the main stem had been broken or was diseased, I should remove all branches from the stem for the first six inches. . . . . . I should make the season of first heavy pruning my trimming season also and thus give the plant once and for all the chance of healing up the bark, of forming in fact a healthy stem with as few abrasions or scars as possible. The argument against this course is that by allowing a longer period the plant has had time to throw down a well-formed tap root, and to thus carry the secondary ramifications well below the level of deep hoeing. I admit there may be some truth in that argument, but the advantages are certainly less than the disadvantages. The bush for example, has meantime formed a straight stem with long intervals between its leaves and consequently very few buds from which to develop branches hereafter."

Having briefly dealt with the manner in which white ants attack living plants and the destruction they are capable of effecting, Dr. Watt proceeds to deal with the remedial agencies against them. When and where possible, the white ants should be dug out, not merely by hand cleaning the stems and branches of the mud encasements, but by digging out and destroying the nest with its queen ant. Dr. Watt is not very sanguine of the value of any insecticide in the eradication of the pest for he considers that "thorough and cleanly agriculture should in the long run prove both more economical and more effectual." A useful preventive against white ants is adopted in the Gondal State, which consists in painting the stems of trees to a height of three feet above ground with a red looking substance, "I found," says Dr. Watt "the red paint, whatever it consisted of, was an effectual protection. In no case did I discover trees encased with mud where the red ring was fairly visible. I enquired into the nature of the preparation used, and the particulars I obtained were published shortly after in a paper on the subject of *Al* dye (Morinda citrifolia, *Agricultural Ledger No. 9 of 1895 pages 3-6*), because in some of the preparations *al* was said to be the colour imparting ingredient." We publish on another page the passage relating to this, and the concluding portion of Dr. Watt's most interesting and valuable paper, which will no doubt be published in pamphlet form at an early date.—*M. Mail*, April 30.

THE KLANG COFFEE LAND FIASCO.

LETTERS FROM MESSRS. CHRISTIE AND FORSYTHE.

The following letters appear in the *Straits Times*:—

Sir,—My attention has been drawn to a statement made in the lengthy anoymous communication regarding the Klang land, which appeared in your issue of the 25th ultimo. Your correspondent states that he is prepared to "demonstrate" that I blamed the Selangor Government, and he refers to having a number of letters written by me to various persons, in which I refer to the action of the Selangor Government in terms of strong disapproval. I suppose the letters in question are from a private correspondence between Mr. W. Forsythe and myself here in Ceylon, and which Mr Forsythe may have sent to his Agent in order that he might know what our opinions were. These letters were written in the middle of 1895 in connection with misunderstandings which arose regarding the wording of our titles and the drainage scheme, but they had no reference to the present state of affairs, and I have never in the least blamed the Selangor Government for the conditions which, in my opinion, rendered my land quite unsuited for the purpose of present cultivation.

The brief your correspondent holds may impel him to inflict much that is of no interest and quite irrelevant on your readers, but he may as well plough the ocean as try to get over the fact that a lamentable mistake (he calls it "ludicrous") was made, that the land proved to be unsuited for immediate planting, and that, when nurseries were made, bungalows erected, and estimates of crops in the third and fourth years framed, there was no idea that years must elapse for the peat to consolidate or—strange phenomenon—the clay to rise up. I have never heard of the "dispute" your correspondent refers to. Those who lost their money believed (and I still believe so in my case) that everything had been done in good faith, but that an error of judgment had been made. It is quite another matter whether the land may become suitable for coffee in two, four, or ten years, and opinions on that point may differ. The block I owned had an unascertained depth of peat, and the experiment of seeing how long it would take to become plantable was one I was not prepared for.—I am, &c., THOS. NORTH CHRISTIE.

St. Andrews, Maskeliya, Ceylon, April 14th.

Sir,—My partners and I have read with some interest the lengthy correspondence which has appeared in your columns in connection with what is known as "The Klang Land Fiasco." To briefly summarize the position of affairs, I beg to state that I visited Klang in February, 1891, and saw only the Chairman's coffee garden, the Datu Dagang's estate, and the few acres planted along the roadside. The two former plots of coffee I regarded as satisfactory, and I requested my agent to select land of a similar nature. He agreed to do so, but did not.

No mention was at first made of delay, or consolidation, or sour soil. We were to go straight ahead, and 500 acres were to be planted by December, 1896. I found upon arrival that we could not do this, and though my agent may be correct in asserting the will *eventually* become valuable and grow

Liberian coffee, we, as tea planters, not altogether ignorant of coffee, cultivation, do not care to accept this assertion or experiment at Klang for a term of years in the hopes of ultimate success. I hold letters from my agent (which, being private, I naturally refrain from publishing) that would prove up to the hilt that our opening works from felling to planting were to proceed without a check. When I visited Klang and satisfied myself that our expectations were not to be realized, I decided to abandon at once. I do not wish to impeach my agent's *bona fides*, but I maintain the opinion which I expressed to him, and which he verbally admitted to me was true, viz., "he had been guilty of an error of judgment." The Selangor Government has accepted our view of the disaster, and I regard the terms offered us as liberal in the extreme. My partners and I have nothing more to say, for we realize that columns of newspaper discussion will neither restore the dollars lost, nor prove that the district south of the Klang river is, at the moment, a coffee-growing country.—I am, etc.,

W. FORSYTHE.

Pambayama, Kelani Valley,
Ceylon, April 22nd, 1896.

EXPORT TEA DUTY AT FORMOSA.

The following letter is taken from the *Foochow Echo* :—

Foochow, 8th April, 1896.

DEAR SIR,—I am informed on good authority that the Japanese Custom in Formosa are now collecting the Export duties on Tea at the rate of $1.12 per picul, which are received and allowed to be exported from Amoy *free*, while the native-grown article has to pay an Export duty of $3.84 per picul.

Surely the 'Heathen Chinee' will not permit their own trade to be handicapped in such a serious manner which must affect not only Amoy but this port, and Shanghai as well.

Trusting that all merchants interested in the American trade will cry out against this crushing injustice to their business.—I am, dear sir, yours obedient servant,

MERCHANT.

The matter of the Formosa export duty on tea, referred to by our correspondent *Merchant* in today's issue of this paper, is of grave importance to many. Of course it touches most nearly the shippers of Oolong tea from Amoy and this port to America, where this description of tea is chiefly consumed; and in a less degree to the general shipper. Assuming that the Chinese will do nothing in the way of assimilating their duties with those of Formosa, the Chinese teamen will have to reduce their prices, or be prepared to hear the buyer say 'I am quite willing to offer you Tls. 17, for this string chop, less Tls. 1.90, to place me on the same terms as Formosa shippers as regards duty.' Unless something can be done it is patent that the tea trade in Formosa will increase very considerably, while that in China will correspondingly decrease.—*China Mail*, April 29.

TEA IN AMERICA.

NEW YORK, April 8.—There is the same quiet and uninteresting market except for choice and fine Formosa, which are scarce and very firmly held, while the low grades are in full supply and weak. On the other hand, the low grades of Japan below good medium are scarce and firm, while the higher grades are in good supply and steady. There is an over supply of greens and a buyer's market. Ceylon and India in fair request and growing in favour, as dealers more and more appreciate their value for blending purposes.

Last week the Montgomery Auction and Commission Company sold 7 613 packages teas as follows :—Moyune—360 Hoyson, 6 @ 5½c ; 878 Young Hyson, 23½ @ 6½c ; 452 Imperial, 15½ at 6c; 514 Gunpowder, 6 @ 11c. Pingsuey—1,342 Gunpowder, 21 @ 6½c. Japan—59 pan-fired, 16½ @ 10c ; 210 basket-fired, 16½ @ 10c ; 21 capers, 16c ; 1,375 Congou, 23½ @ 7½c ; 286 India and Orange Pekoe, 16 @ 22c. Oolong—152 Foochow, 9 @ 7½c ; 45 Amoy, 12 @ 7½c ; 1,821 Formosa 40½ @ 14½c.

Today at noon the Montgomery Auction and Commission Company will sell 10,670 packages, viz.: 2,932 half-chests Moyune, including many desirable chops; 1,773 boxes Pingsuey ; 131 half-chests Japan and Nibs ; 30 half-chests Japan, basket-fired ; 795 half-chests and boxes Congou, including fancy Ning Chows ; 20 boxes Capers ; 48 packages India, Java and Ceylon Pekoe ; 302 half-chests and boxes Amoy ; desirable leaf ; 890 half-chests Foochow, including 492 half-chests of the celebrated "Man Thie" chop, new season's ; 3,748 half-chests and boxes Formosa—a particlarly attractive assortment of all grades.—*American Grocer*.

THE SPECULATION IN CAMPHOR.

Following the announcement of a break in the price of camphor in London, where the syndicate has reduced its quotations from 210 shillings to 180 shillings per hundredweight, equal to a reduction of over seven cents a pound, the refiners here have dropped their price four cents a pound, the result being an unsettled feeling as to the position of the article. When a similar reduction was made by the syndicate some months ago, it was not met by the refiners, and contrary action at the present time is believed to indicate that they regard the situation as one of less intrinsic strength than it was on the occasion of the previous break in London. It would appear from an examination of the statistics that the syndicate is very heavily loaded, and that its manipulation of prices has so far checked the demand for the gum and turned the consumption on to substitutes, that its ability to maintain the corner it has undertaken to establish is scarcely among the possibilities. The statistics of imports, deliveries and stocks at London in packages for a series of years, as given in the following tabulation, is of interest :—

	Imports.	Deliveries.	Stock Jan. 1
1890	13,722	8,157	———
1891	8,656	9,931	5,598
1892	8,429	10,029	4,327
1893	12,167	10,799	2,727
1894	11,081	11,633	4,883
1895	19,711	7,740	4,300
1896	——	——	16,270

The stock on March 1 had been reduced to 13,674 packages, the imports during the two preceding months having been but 675 packages, against deliveries of 4,398 packages. The stock, as shown by these figures, does not represent the entire London stock, although when taken in connection with the diminished imports since Jan. 1, it may be taken as indicating that an unusually large proportion of the world's stock is held there. In fact, latest Hongkong circulars state that stocks are small, and report transactions in access of receipts, with prices at the time rather firmer after a drop during the month of February.

The syndicate is generally credited with holdings amounting in all to between 25,000 and 30,000 packages, and it appears to have had little hand of late in supplying the demands of the American market. The deliveries for 1895, as stated in the above table, show clearly the effect of high prices on consumption. In 1893-94, when speculation was induced by the growing demands of celluloid makers and for the newly exploited smokeless powders, while the prices approached somewhere near the average that the syndicate maintained last year, consumption was kept up by the outlets which the industries named afforded. But since then the powder makers have discovered new matrials, and many of the larger outlets previously afforded through the drug trade have been supplied by cheaper substitutes. It is, therefore, safe to assume that the consumption of camphor is so far below the supply that an equilibrium can only be restored by the reduction of prices to a point which will regain for it the preference over competing articles. How long the syndicate will resist

this result is, of course, doubtful, but its inevitability would seem, none the less, to foreshadow the tendency of prices, and the ultimate ending of another futile effort to corner a natural product.—*Oil Paint and Drug Reporter.*

TEA AND COFFEE.

Ceylon planters are jubilant at the Chancellor of the Exchequer's statement in submitting the budget which states that tea is expelling coffee from the market. No doubt the Indian and Ceylon kinds are rapidly replacing those grown in China, but it is not quite so clear that all this satisfaction can be showed by those who are interested in the production of coffee. The important point it seems to us is that tea can be prepared quickly by the most ignorant of workman's wives, while the preparation of coffee as a beverage is a more elaborate and more protracted business. Even when purchased ready ground the the making of the coffee and its percolation through the receiver of a properly constructed coffee pot requires more care than the mere pouring of boiling water on tea does. Coffee also demands the consumption of more milk than is available in the poorer classes of households, whereas tea, with a little sugar, and little or no milk, is still a popular drink. Still acknowledging the greater convenience of tea as a beverage for the masses, coffee, especially if its use by the poorer classes can be simplified and popularised to a greater degree than at present, should always command so large a market that capital need not hesitate to invest in the production of coffee in the Straits or other suitable field for its cultivation.—*S. F. Press*, April 28.

COFFEE NOTES.

From the state of Espirito Santo there were exported last year 24,641,617 kilos (410,693 bags) of coffee, or 1,500,000 kilos more than in 1894. The official value of the coffee exported last year was 31,528,000 $000.

The *Diario Popular* of São Paulo has had two branches from coffee trees of Ribeirão Preto on exhibition in its office. Each branch shows 21 clusters (*rozetas*) of fruit, all well filled and finely developed. This certainly does not confirm the recent reports of a greatly diminished crop.

It is reported from the city of Mexico that the representative of a syndicate of English capitalists has recently purchased 500,000 acres of coffee land on the isthmus of Tehuantepec, and that the tract will be planted in coffee trees. American capitalists have invested several hundred thousand dollars in coffee lands on the isthmus within the past few months.—*Rio News*, March 24.

TEA MARKET.

The Tea market wears a firm aspect, Indian tea coming in for chief notice, and the advance on the lower grades since the commencement of the month is over 5 per cent. Ceylon tea shows some improvement, both in quality and price, for the lower grades. China growth is out of favour for want of suitable supplies.—*L. and C. Express*, April 24.

MARKET FOR TEA SHARES.

Thursday Evening, April 23rd, 1896.

There has been continued strong buying of all the more prominent Indian Tea Shares, and the "Official List" again records advances—in some cases more than one during the week—in three or four of the issues included in its column. In most cases there is scarcity of stock, holders preferring to hold on and await receipt of the final 1895 dividends, shortly to be announced.

Mincing Lane Market for the produce marks an advance, with a scarcity of supplies of Indians and no excessive over-supply of Ceylons.

QUOTED SHARES.—East India and Ceylon Ordinary have been taken at 11½. Nothing in Prefs.

CEYLON SHARES.—C.T.P. Co. Ordinary have changed hands at 50½, with more wanted, and the Prefs. at 17½.

Eastern Produce shares have been taken, we understand, at 5¼, cum final 3½ per cent. div. just announced.

New Dimbula B's have changed hands at 19 and at 19½.—*H. & C. Mail*, April 24.

PLANTING AND PRODUCE.

THE SINEWS OF WAR.—We print elsewhere an appeal and a remonstrance addressed by those members of the Indian Tea Association, London, who constitute the committee charged with the work of developing new markets for Indian tea to those companies and firms who have held aloof from helping the cause. It is usually very difficult to persuade the various members of an industry that something more than moral support is required. We take it that there are not two opinions as to the necessity for opening up and developing new markets, but it would seem that, although this is admitted as a general proposition, there is an absence of that practical support which is necessary if the work is to be carried on effectively. There is no lack of a certain sort of fervour on the subject but there is a want of money. Perhaps some of those concerns who have hitherto smiled "a sickly sort of smile" when new markets are mentioned will be induced to abandon their lukewarm policy and "come down handsome." If in these days of comparative prosperity there is an insufficiency of funds, the outlook is not encouraging. Now is the time when money well spent will be of real service. It is the duty of those who will benefit by the increased consumption of Indian tea abroad to share in the initial expense, or if they do not take a hand they should, as a matter of course, state plainly why they do not. We hope the appeal will draw forth a supply of the needful, or, at least, lead to an explanation of the reason why.

NOT A BREAKFAST TABLE BUDGET.—The Budget was not calculated to please everybody, and the *Grocer* is not satisfied with it. It says: "From the point of view of that immense body of law-abiding and hard-working citizens, the retail shopkeepers, whether grocers or what not, the Budget is emphatically a bad one, a most disappointing one. We hear such expressions as 'a wonderful year,' and we have the Chancellor of the Exchequer boasting of his mammoth surplus. He has handled the largest surplus on record, beating by half a million the Lowe and Gladstone surpluses of six millions each. But what has been done with it? The Lowe year was that in which we drank off the Alabama claim, as Lord Derby said, and that year may be left out of the comparison. With the second example of a six-million surplus this week's Budget will not bear comparison, from the grocers' standpoint, for a single moment. Sir Stafford Northcote took a penny off the income-tax, took off the sugar duty and aided local taxation. All these were direct and substantial helps to the grocer, putting money straight into his cash-box. What does Sir Michael Hicks Beach do for the retailer of any kind? Absolutely nothing. The four and twenty blackbirds which ought to have begun to sing when his financial pie was opened have all flown away—most of them to sea, and the remainder into the farmers' fields! The Budget statement itself is not without interest; what we complain of is the misapplication of the surplus. The *Grocer* is pleased, of course, to learn that in the Customs Revenue tea has produced £3,745,000, or £120,000 more than was estimated. The Chancellor commented on the increased consumption, 10,000,000lb. of tea, and remarked that our trade in tea is being rapidly transferred from China to India and Ceylon. In 1875 no less than 122,000,000lb of tea came from China; in 1895 about 31,000,000lb; in 1875 23,220,000lb came from India and Ceylon; last year the figure was 190,000,000lb. Then the cocoa receipts increased by £5,500, for we consumed last year twice as much cocoa per head as we did twenty years ago—ten ounces instead of five. On the other

hand, whereas we consumed twenty-one ounces of coffee per head forty years ago, we now consume but eleven ounces. Coffee receipts are on the decline, and so also are the receipts from dried fruits, notwithstanding raisins produced £5,000 more than last year. All this information is interesting enough, no doubt. But information is a poor substitute for cash—for the remissions of taxation which grocers and other retail traders had a right to expect. It was hoped, for example, that the Government would have swept away the coffee duty, and the fragmentary duties on chicory, cocoa, and dried fruits; or would, at least, have reduced the 7s duty on raisins and figs to the level of that on currants, admitting all kinds of dried fruit at 2s per cwt. It was hoped, again, that the additional ½ per cent on the Customs charges in general would have been remitted, since this exaction is irksome to those actively engaged in getting goods out of bond."

THE DIRECT IMPORT OF TEA TO MANCHESTER.—The quantity of Indian and Ceylon tea sent from India and Ceylon direct to the Manchester market was 1,198,429 lb.

COFFEE AND CHICORY.—It is necessary that there should be frequent plain speaking on the subject of coffee adulteration, and that something tangible should result. The Norfolk county analyst has just called attention to the subject. He says: "I have during the past quarter asked the police to collect some samples of mixed coffee; that is to say, coffee which has a declaration label on it that it is a mixture of coffee and chicory. I have long had a suspicion that in this county some very extreme mixtures were offered for sale, and the result of my examination proves it to be so, but the label is supposed to protect the seller, and therefore I cannot issue a certificate for prosecution. Nevertheless I think it is a very serious matter to find that coffee is sold with over 90 per cent of chicory. Coffee, like tea, contains an active principle which is really an essential food, whereas chicory contains nothing of the sort, and I am of opinion that no such trading as this ought to be allowed in your county. There is still the collection of samples by the police, each man in his own district, and I must as heretofore protest that by such an arrangement it is almost impossible to ascertain the actual amount of fraudulent dealing which goes on in the county. The percentage of adulteration for the year ending 25th inst. is 9·28, and if the samples of coffee were included it would be brought up to about 12 per cent., which is a high result."

THE DECLINE OF COFFEE DRINKING.—The Chancellor of the Exchequer in his Budget speech delivered himself of some opinions on produce regarded from the revenue point of view. He believes tea is killing coffee, or driving coffee out of the market, because it is cheaper, requires less milk, and is easier for people to make. Whereupon the *Daily Telegraph* says that probably the true explanation lies in the last of these three reasons. Coffee does not get justice done to its noble possibilities. Many cooks betray it by being too idle or too ignorant to elicit its true qualities, and there is hardly a female housekeeper or mistress of a house who has any proper and adequate idea of the importance—we had well-nigh written the dignity—of the berry. Tea lends itself with a fatal facility to the teapot and the gossip-table. Like gas, it is so desperately handy. Packed neatly in its leaden case, and preserving its aroma, it is only too easily employed, and perhaps is the explanation of much of the nervous maladies common among our womankind. The machinery of the tea-table is elegant and amusing without being exacting; and nobody is so stupid as not to be able to "make a cup of tea." Coffee, unhappily, ought to be roasted and ground, *ad hoc*, for the hour of using. It ought to be conscientiously concocted, with a knowledge of what is good and what is bad in this noble drink; and with all deference to the Chancellor of the Exchequer, milk ought never to mingle with the true and perfect cup Mocha. Coffee is the natural friend and consort of tobacco, which is another reason why it has not being favoured by the fair sex, whose verdict is so powerful in regard to coffee. But, as the impartial friend of woman as well as man, we dare assert that quite as much might be advanced in favour of this infusion as of tea by way of a popular beverage. It is the coffee-maker, not this excellent and valuable gift of nature, who must be blamed for the victory, perhaps only temporary, which the tea-leaf has gained over the delicious berry.—*H. and C. Mail*, April 24.

NEW MARKETS FOR TEA, AND THE NECESSARY FUNDS.

The following letter has been addressed by the members of the American and Foreign Tea Committee of the Indian Tea Association to those companies and firms who have hitherto neglected to support the efforts made to open up new markets:—

The Indian Tea Association (London),
14, Saint Mary Axe, E.C.
April 11th, 1896

Dear Sir,—At the request of the General Committee we beg to invite the special attention of your board to the claims of the American Market Fund to your support, and to the following facts and figures.

We believe that our efforts to introduce Indian tea into America have already paved the way to relieve the London market of a large quantity of tea, which would otherwise have been thrown upon it with the effect of lowering the prices of all discriptions, including that class of tea for which at present there may be no demand in America. The figures published show that the consumption of Indian tea in North America has increased during the past year by over 2,250,000 lb. or 80 per cent over the previous year.

Outside markets took 38,000,000 lb. of the 1895 Indian and Ceylon crop, or an increase of 9,000,000 lb. over the previous year, and this expansion is doubtless largely due to the efforts made by the Indian and Ceylon Associations to open new markets in different parts of the world, and what the position of the London tea market would have been had it not been relieved of these extra 9,000,000 lb. your board can easily imagine.

If a leading company like yours refuses to join in the efforts being made, advantage is taken of the fact by others, who then follow suit, and therefore we are very anxious that your board should support the work, is being which done in the interests of the whole industry.

We will thank you to bring this matter at the earliest opportunity before your board, and trust your reply will be a favourable one.—We are, dear sir, yours faithfully,

ARTHUR BRYANS, ROBERT LYELL, R. G. SHAW, A. G STANTON, J. N. STUART, W. H VERNER.

Members of the American and Foreign Tea Committee.

ERNEST TYE, Secretary.—*H. and C. Mail*, April 24.

LANTANA.—A planting correspondent writes:—A great outcry is being made by some of the sub-deputy Foresters of India against this useful and beautiful plant - the greatest curse, they say, "ever imported into India worse than the thistle or rabbits in Australia"! And they repeat the old yarn about "the first plant being brought out in a Flowerpot, 30 years ago." It would be difficult for even a Forester's assistant to write greater nonsense than the above. I have known the Lantana in this garden of India for well-nigh 40 years and then it was fully as luxuriant on the hills around Kandy as it is now. Moreover very close observation leads me to the conclusion that it has done more to renovate the Kandyan hills than all the imported or Municipal manures. My only regret is to see it dying out in the unequal struggle with that more doubtful and less beautiful interloper, the Sunflower. The Grevillea is another plant which is doing splendid work in renovating our hill sides.

VARIOUS PLANTING NOTES.

PURCHASE OF A COCONUT PROPERTY.—We learn that Mr. Thomas E. de Sampayo, Advocate, has purchased Moregodo Estate, situated in the Henegamgoda district, from Mrs. Joseph Perera, wife of the late Stationmaster, for R10,000. The property is forty acres in extent, is fully planted and most of the trees are in bearing. The sale was effected by Mr. P. A Ekanayeke Mudaliyar.—"Independent."

CALIFORNIA ORANGE CROP.—An exchange states that "during the next three months southern California will be engaged in picking its orange crop, which is estimated at 2,800,000 boxes, or two-thirds of a full yield. The crop will sell for $5,000,000, which is an excellent return from an industry only fifteen years old. About $33,000,000 has been invested in the orange groves of southern California. There are in bearing 10,000 acres, and 80,000 more acres are planted."—*Bradstreet's* April 4.

WHITE-ANTS ON TEA ESTATES.—On page 827 we quote an interesting extract on this subject, and in a subsequent issue we hope to be able to give the editorial comments of the *Madras Mail* on the first instalment of Dr. George Watt's paper on white ants which is understood to be one of the chapters of his forthcoming Tea Report. With regard to remedial agencies Dr. Watt says that when and where possible the white-ants should be dug out, not merely by hand cleaning the stems and branches of the mud encasements, but by digging out and destroying the nest with its queen ant. He does not seem to be very sanguine of the value of any insecticide in the eradication of the pest.

AN ANCIENT ROSEBUSH.—The oldest rosebush in the world is found at Hildesheim, a small city of Hanover, where it emerges from the subsoil of the Church of the Cemetery. Its roots are found in the subsoil, and its primitive stem has been dead for a long time, but the new stems have made a passage through a crevice in the wall, and cover almost the entire church with their branches for a width and height of 40 feet. The age of this tree is interesting both to botanists and gardeners. According to tradition, the Hildesheim rosebush was planted by Charlemagne in 833, and the Church having been burned down in the 11th century the root continued to grow in the sub-soil. Mr. Raener has recently published a book upon the venerable plant, in which he proves that it is at least three centuries of age. It is mentioned in a poem written in 1690 and also in the work of a Jesuit who died in 1673.—*Inverness Courier.*

A SUCCESSFUL NURSERY.—"Some few issues ago," writes 'P,' you had correspondence regarding tea nurseries. "At the end of November last I bought 1½ Bengal mds. seed from the Seaforth Estate—which was well sunk—and immediately put into a germinating bed in the open. The seed in two layers 4" and 2" deep respectively. In the meantime the nurseries were prepared on virgin soil—well dug and forked several times to the depth of 15". On Christmas day I began transplanting to the nursery, and up to date have put out 38,000 plants, all of which are coming through splendidly with the exception of the first bed, over which I erected the old-fashioned pandal. On the two next I put a layer of thatching grass on the ground, and these are doing fairly well; but on the remaining bed I put layers of ordinary bracken fern and in which there is hardly a failure. This may be of interest to your readers. The germinated seed was planted 1 to 1½ below the surface and has been regularly watered. I may add that I am still planting, and fancy I have another 5—7,000 plants in the germinating bed. This is the largest number of plants I have ever put out from a similar quantity of seed, and if the quality is equal to the 'namma' leaves I bought from, I think most planters will agree with me that, together with the quantity, the success of the seed is exceptional."—*Planting Opinion,* April 11.

KLANG AND ITS COFFEE LAND is the title of an extract which we give in another column from the *Singapore Free Press* being a quotation from the report of the Government officer of Klang regarding the abandonment of coffee land in that district by Ceylon planters.

ORANGE GROWING is being abandoned on the peninsula of lower California, and the orchardists are cutting down the trees and planting the land with coffee, cotton and sugar cane. The low prices obtained for oranges lately grown on the peninsula have discouraged the growers, and they believe more profits will be derived from the other products, especially cotton, which grows will.—*American Grocer,* April 1.

"THE CEYLON FORESTER" for April has the following Contents:—Ceylon Forest Law; Forestry in Ancient Times; Climatic Influence of Forests; Wood Preserving in Switzerland; The Cecidae of Ceylon; Notes on Trees and Plants used for Drugs, Dyes, etc. in the N.C.P.; Botanical Notes on Trees; Government "Gazette" Notifications; Result of the Auction Sale of Ebony held at the Central Timber Depot on 10th March 1896.

THAT CITRONELLA OIL.—The kerosenated citronella oil has begun to haunt the public drug auctions, where it threatens to become a frequent visitor. The first batch rejected by Messrs. Domeier & Co., consisting of four drums, marked P & C, was placed in sale today. It was catalogued as "mixed citronella oil," and the broker declared that it contained from 40 to 42 per cent of kerosene. He was thereupon subjected to several charming inquiries as to whether this was a "sale by sample," whether he guaranteed the genuineness of the kerosene, whether he was offering the oil as citronella or as kerosene, and so forth. No one made a bid, and the lot was "bought in."—*Chemist and Druggist,* April 18.

PLANTING IN B. N. BORNEO.—The *British North Borneo Herald* of 1st April says:—We hear from the Commissioner of Lands, who visited the Byte Estate on the 23rd March, that a very heavy blossom was then on the coffee trees which promise a heavy crop during the next twelve months. We hear that Tek Seng has opened 100 acres of land for coffee, &c., and has planted 37,000 coffee trees and 2,000 coconuts and other fruit trees and hopes to open more land this year for which he has prepared nurseries. He complains of the want of communication and says that he has already damaged some rice by taking it by sea when the weather was bad. When the road to the Byte is opened it will run along the boundary of Tek Seng's land, after passing through the clearings planted by Mr. Pryer and the Trading & Planting Co. The want of roads has perhaps been one reason why the Sandakan peninsula has been so little cultivated.

SOUTH WYNAAD SEASONS.—For the benefit of our Ceylon readers we insert the following tables of the year's crop of the Perindottay estate originally sent to the *Madras Mail.* The jat, it must be remembered, has been pronounced by a well-known Ceylon man, Mr. William Taylor, as one of the worst he has ever seen. The outturn was 59,580 lb. more than that of the preceding year, and as there are 175 acres in bearing, the yield works out to just over 500 lb. per acre:—

1895 April	..	..	1,983 lb.
May	..	..	10,101 ,,
June	..	..	7,432 ,,
July	..	..	8,863 ,,
August	..	..	9,660 ,,
September	..	..	11,018 ,,
October	..	..	13,318 ,,
November	..	..	9,050 ,,
December	..	..	7,831 ,,
1896 January	..	..	5,840 ,,
February	..	..	3,646 ,,
March	..	..	*Nil*
			88,742 lb.

While on the Wynaad, we would draw attention to the first sale of tea from the Charambadi District, Kalambyle Estate, recorded in our Market Supplement as having obtained the excellent average of 10¼ per lb.—*Planting Opinion,* April 11.

Correspondence.

To the Editor.

CEYLON TEAS IN AMERICA.

MR. MACKENZIE'S OPINIONS.

SIR,—The enclosed cutting from a New York paper of 21st March sufficiently proves the wisdom of Mr. Mackenzie in abstaining from joining in the proposed Empire Exposition (in Montreal) on behalf of the Thirty Committee [Extract reproduced below].

Mr. Mackenzie draws attention to the requirements of the trade in U. S. A.

(1) That samples should be sent over in time to allow the dealer to wire an offer before the teas are warehoused in London.

(2) Lightly fermented, well twisted Orange Pekoes—not Broken Pekoes (that is *if* broken).

"The run is on very good teas for quality, and to a much greater extent in Pekoes and Pekoe Souchongs, which can be landed here under 14 cents (7d). The demand is strong at present for Ceylons and Indians, and the quantity used is limited at present by the impossibility of obtaining teas unbroken in appearance, evenly twisted and lightly fermented, which can be matched from standards.'"—I am, &c.,

April 22nd. A. W. S. SACKVILLE.

CEYLON TEA IN AMERICA: IMPORTANT LETTER FROM MR. MACKENZIE.

New York, April 3rd, 1896.

DEAR STOPFORD SACKVILLE,—I think it would be well if I said something of the position here at present with regard to British-grown machine-made teas. Much of what I may say is necessarily vague, as it is impossible to get a hold of facts, though surmises are numerous.

I am afraid the great increase of imports of those teas into the States and Canada last year may lead one to believe it has been due chiefly, if not entirely, to the efforts made by the Indian and Ceylon Committees, and that if our success was so great in 1895, it only requires a vigorous prosecution of similar means to insure a complete victory in the near future. I wish I could delude myself into accepting that view. It would bring exceeding comfort.

The increase in imports was chiefly due to the low price of teas. This led to buying in excess of requirements, and the inquiries among dealers leads me to think that much of the tea imported has yet to be consumed. If this be correct, it will tell against imports in the early months of this year. All we know about them so far is that the exports of Indian tea direct from London during January and February are very much below those of the same months last year. Of course, this may be off set by larger shipments from Calcutta.

The two largest importers of Indian teas now draw chiefly direct from Calcutta, one by unconditional consignments and the other by a method which should be largely used by shippers from Ceylon, but which so far is very sparingly adopted, (and only by one firm.) This firm sends samples of shipments to their agent here a week before the teas leave Calcutta and Colombo. The agent here examines the samples and wires values to London. If the valuation here is better than the values put in London, on duplicate samples sent there at the same time from Calcutta and Colombo, the teas are transhipped at the London docks and sent on here, thus saving London charges. Many buyers here have asked me why this system has not been largely adopted in Colombo. The only reasons I can urge are, want of enterprise in Colombo, arising from great loss already incurred by consignors, and the small quantity of tea shipped from Colombo to London, which is controlled by firms who are tea merchants with agencies here. Most of the tea purchased in Londog and Colomobo is sent to Australia India, Russia, etc. The teas shipped to London are almost entirely on account of growers, who are not merchants dealing with American firms.

Companies managed by "live" men, might be asked to try this advance sample scheme here.

To consignors there is no inducement in this market, as inferior teas from London are sold as "just as good," at prices which would not pay Colombo shippers. Writing to the Secretary lately, I pointed out that teas were sacrificed at the auction, (there is one every Wednesday,) for figures much below their value. Since then at this week's auction good Ceylon teas were sold at 6½d. to 7½d. per pound, much below their valuations as the leading importers will not buy at auction unless at a price which shows a loss to the consignor, because they want to kill such business.

An interesting fact at this auction was the appearance of a small parcel of Ceylon green teas, But the tea should not have been offered at auction sale. The price of best quality was two cents over broker's valuation. But I saw the teas tasted and valued by two dealers who handle large quantities, as well as by a Canadian dealer. They all pronounced them excellent, but said Japs are so cheap that these nice teas have no chance. To me the teas appeared clean and free of dust, but as compared with Japs they had too many fannings. One dealer said the best grade with a little more sifting would be worth 25 cents. It sold at 17 cents. The price was better than that fetched by Ceylon blacks of similar quality at the same auction, which is encouraging, as millions of pounds of these teas would find a ready sale here. I hope this new departure may be more extensively tried. But next time the teas should be shipped to a fair and just man who will give them an honest trial, and who will not take an interest himself in having them go cheap, I do not mean to insinuate that they were not consigned to a just man; I do not even know to whom they were consigned. But I know others valued them considerably over the prices they fetched.

A few million pounds of Ceylon Greens sent here would keep down shipments of Blacks to London, and prevent any increase in the future in total shipment of Black Tea from Ceylon. The example would be followed in India, and the speediest solution of the difficulty of an overcrowded home market would be struck at once. Present prices are near the point where necessity steps in, and supplies the stimulous required to force growers to adapt their goods to the taste of the market they may beseeking. In the advance sample system, and in Green Teas, I think I see agents more helpful than even in the money being spent as aids to advertising. There is no doubt at all about the steady yearly tendency to lower all round prices, and we should exert ourselves in other ways than the mere spending of the "cess." And this I am not afraid to urge, every while Ceylon planters are under the

glamour of dividends of 45 and 50 per cent. Take another penny off prices all round, and what would be the value of shares now at 200 to 700 per cent premium? Growers all the world over are conservative in their ways, and not prone to adapt their goods to circumstances. But merchants, when not already too well off, and when they are in the position to control the articles manufactured by the companies, should bustle for the demand existing here, and not confine their energies to pushing one article into the market for another. The latter process is slow and costly the other is immediate in its action, and up to a few millions of pounds I believe there is more profit here in green teas than there is at present prices of the Black Teas, which are grown on estates giving 250 to 350 pounds per acre, and which average 6 to 7 pence per pound.

All the above relates to "views" and "surmises," to "faith" and "opinion," but I can give a sediment of facts. There can be no doubt there are many more dealers handling our teas pure and in blends than there were a year ago. All leading grocers in New York and Brooklyn now keep them. We have sent girls round to hundreds of shops to buy small quantities that we might test the quality. — — — — and others, by their extensive pushing of package teas, have forced several leading wholesale houses to bring out their own packets, and we have, at the present moment, many American houses working in conjunction with us in territory holding quite half the population of the States, who, a year ago were doing little or nothing for us. Between them they have scores of lady demonstrators and hundreds of drummers, and all are pushing energetically in the various methods Americans adopt, issuing samples, pamphlets, circulars, and advertising in local papers, while we do the general advertising for consumers.

WM. MACKENZIE.

CEYLON TEA IN AMERICA.

Young's Hotel, Boston, April 8th.

DEAR SIR,—It may perhaps be of interest to you to hear news from these parts though you are probably well posted up from other sources.

I have now been in America for some weeks during which my whole time has been taken up interviewing the most prominent Tea Dealers in the various cities of the States. When I was here last year I was fairly successful in introducing Ceylon teas though it was very uphill work. This year I have been much impressed with the distinct stride our teas have made in public favor. While their consumption is still comparatively small and the inquiry for them to any large extent limited, there is little doubt but steady progress is noticeable, and where a deal of tea chests was quite a hard business twelve months ago, the same men will now buy fifty without very much pressing. This speaks for itself. It is quite evident that our teas are "catching on" to the American palate, but there is a lot of hard and persevering work to be done yet before we can rest on our oars, Oolongs and Formosa teas form the general consumption and these are not to be superseded easily. Nevertheless, his old Scotch adage of putting a "stoot heart to a stey brae" will, I feel sure, tell in the long run, and Ceylon will in time win the day.

There is no doubt, that a good deal of harm has been done, and the good cause hindered by his many inferior Ceylon teas sent to America some two years ago. A prominent dealer complained bitterly to me yesterday of the trash which was foisted upon them at one time, and illustrated a case when some 50 chests were purchased fully two years ago, and up to the present time it had been found impossible to dispose of any of them; he added that it was decided to throw them away on the rubbish heap!

I met our rosy Commissioner last Saturday along with Mr. Blechynden on board the "Umbria" starting back for England, and he will, doubtless, be giving the Association an account of his visit which will appear in your columns. So I will not add more. I hope to return to London myself on Saturday.—Yours faithfully,

J. M. MAITLAND-KIRWAN.

THE OTTERY TEA COMPANY FO CEYLON, LTD.

Colombo, April 30

DEAR SIR,—We beg to inform you that at a directors, meeting of the above Company held yesterday, an interim dividend of 5 per cent was declared for the 6 months ended 31st March.—Yours faithfully, LEE, HEDGES & CO.

Agent and Secretaries.

MANURING COCONUT PALMS.

May 4.

SIR,—In your "All About the Coconut Palm," page 8, you describe how the lagging coconut plants should be manured. As stated therein, I marked a circle three feet from the stem and filled the trench cut beyond it with cow dung and covered it with the earth dug out. They say that this practice would breed, grubs, worms and insects, which will eventually destroy the plants, which I may say are less than 4 ft. in height from the ground. I also find grubs in the cow dung utilised. Should I desist from manuring in this manner? Can plants which have been in the nursery for over a year, and about 3 ft. or more in height, be planted with advantage in estates?—Yours truly,

YOUNG PLANTER.

[Will some experienced coconut planter give his opinion on these questions?—ED. *T.A.*]

MANURING COCONUT PALMS.

May 11.

SIR,—*Re* "Young Planter"'s letter about manuring coconut palms in your valuable paper of the 7th inst., my opinion is as follows:—

There are different modes of manuring. I find by experience that instead o. cutting a trench, and putting the cattle dung, &c., into it, it would be better to throw the manure over the surface about 2 feet from the stem and dig it in with the usual native-made mamoty. This I have found better for young palms than trenching.

Cattle manure here is used very extensively, contract cattle being kept for that sole purpose. I have never found the trees destroyed by grubs, worms, &c. Although I have only had 10 years' experience, I should like, myself, to see what older experienced men have to say on the matter.

With reference to "Young Planter"'s other query, *re* 1 year plants, they can well be planted to advantage, and will with care turn out as good as any.—I am, yours truly,

H. J. M. T.

CROSSMAN & BRO. ON COFFEE.

A circular letter issued by W. H. Crossman & Bro. (March 13, 1896,) discusses the outlook for coffee, and shows the errors of European statisticians as to the true position of the article. Messrs. Crossman & Bro. evidently endorse the estimate of 10,000,000 bags as the outcome of the Brazil crop of 1896-97. They admit that probably 1,500,000 bags will not be marketed, thus leaving 8,500,000 bags available for export,

If we examine these figures by the light of past records, we find that Brazil exported in six years ending June 30, 1895, a total of 34,086,000 bags (2,005,059 tons), or a yearly average of 5,681,000 bags (334,177 tons).

The average annual deliveries of all kinds of coffee for four years ending June 30, 1895, were 10,883,791 bags (640,223 tons), of which Brazil fur-nished 5,994,750 bags (352,632 tons) yearly average, representing 55.08 per cent of the world's total deliveries.

It Brazil's contribution to the world's supply is 55 per cent. of the present requirements (about 11,000,000 bags,) then if crop of 1896-97 turns out 8,500,000 bags, the rest of the world need only furnish 2,500,000 bags. But all other countries than Brazil have for several years furnished an annual average of 4,889,041 bags, and if in 1896-97 all crops outside of Brazil only come up to the average, there will be available for export next season a grand total of 13,389,000 bags of coffee.

Everyone knows that high prices have stimulated production and that new plantations are every year coming into bearing in Mexico, Central America, United States of Colombia, Africa and other points. If production outside of Brazil should show a like increase as in that country we would have a much greater supply.

Crossman & Bro. point out that at no previous time has the position been as it is now on the eve of a large crop, with less speculative interest or larger supplies of actual coffee. It certainly looks as if the trade would soon be face to face with the largest crop ever harvested, promising, as Crossman & Bro. say, a surplus of 2,500,000 bags in excess of requirements. And this points unmistakably to lower prices.

We compile from the Coffee Exchange statistics the following table showing the position of coffee during the last crop year :—

		Bags.
Stocks in United States, July 1, 1894 ..		297,130
Stocks in Europe, July 1, 1894		1,581,423
Receipts in U. S., July 1, 1894, to June 30, 1895 ..		4,647,831
Receipts in Europe, July 1, 1894, to June 30, 1895 ..		7,211,545
Total supply ..		13,737,929
Less stocks in U. S. July 1, 1895 ..	549,015	
Less stocks in Europe, July 1, 1895 ..	1,673,665	= 2,222,680
Deliveries for consumption ..		11,515,249

Let us supplement this wit a statement for the calendar year 1895, and we have the following :—

	Bags.
Total visible supply January 1, 1895 ..	2,678,207
Arrivals in Europe 1895 ..	7,342,593
Arrivals in United States 1895 ..	4,590,400
Total visible supply 1895 ..	14,611,200
Less visible supply January 1, 1895 ..	3,552,792
For requirements ..	11,058,408

If we make a third group of figures, waiving stock afloat, we have the following showing :—

	Bags.
Stock in Europe January 1, 1895 ..	1,150,652
Arrivals in Europe 1895 ..	7,342,593
Stock in United States January 1, 1895 ..	320,595
Arrivals in United States 1895 ..	4,590,400
Total supply ..	13,404,240
Less stock in Europe and U. S, January 1, 1896 ..	2,149,792
Consumption 1953 ..	11,254,448

If in 1896-97 the world needs 11,250,000 bags of coffee, and all countries outside of Brazil may be counted upon for 45 per cent of the total production, or 5,062 500 bags, it follows that we need from Brazil 6,187,500 bags. If the crop turns out as estimated—8,500,000 bags for export—there is an excess over the world's requirements of 2,312,500 bags, exclusive of the carry-over, which will probably bring the total to over 3,000,000 bags beyond any year's consumption on record. When supply exceeds demand, prices always go down. The outlook is for an era of cheap coffee, and thus this article will come to harmony with wheat, corn, cotton, iron, tea and other great staples, contributing further toward making the present a consumers millennium.—*American Grocer*, March 18.

PUNA AS A COFFEE DISTRICT.

During a recent visit to the Island of Hawaii, Mr. C. L. Wight, president of the Wilder S. S. Co,, General Warfield, proprietor of the California Hotel, San Francisco, Mr. Desky, of Bruce Warring & Co., and the editor of this Journal had the good fortune to visit the coffee estate of Honorable R. Rycroft' in Puna. The party arrived at Pohoiki, on the morning of the 23rd ult., and were most hospitably received by Mrs. Rycroft and her charming family.

Horses were procured for the party shortly after arrival, when all proceeded to the coffee fields which are situated some three or four miles inland from the steamer landing·

Miss Sophie Rycroft, the charming daughter of the genial Representative, accompanied the visitors, and proved herself to not only be well versed in coffee culture but an expert horsewoman as well. Mr. Rycroft's plantation is a sight long to be remembered, and demonstrates beyond the shadow of a doubt that all the conditions favourable for coffee growing exists in the district of Puna. Miss Rycroft explained to the party the various details necessary to the successful cultivation of a coffee estate, evincing a lively and intelligent interest in her father's affairs. On either side of the road leading to the coffee fields are to be found various kinds of citrus fruits and also many varieties of native fruits much prized in this country. Tropical foliage and woods abound everywhere and bear evidence of perfect freedom from all kinds of disease or blight.

Orange and lime trees grow wild on Mr. Rycrofts lands, while evidences of ancient coffee plantations are to be found in the many old trees dotted here and there amongst the natural tropical growths Mr. Rycroft's success in bringing coffee to the front as a staple industry of Hawaii will prove a splendid advertisement for the country as well as an independent competence for himself and family for the rest of his days. Mr. Rycroft's great mistake has been in not going into the coffee business years before he did. Although a resident of the district for over eighteen years it is only within the past five years that he has turned his attention to coffee growing. During that time he has succeeded in clearing and planting over thirty-five acres the trees on about 25 of which are now four years old. The remainder of the plant runs from one to three year's growth. This year he picked over 15,000 pounds from the four-year-old trees which is a good yield when it is considered that coffee trees are not supposed to give much returns before the fifth season the trees are all clean and healthy and give promise of a very large yield next year.

Having seen Mr. Rycroft's plantation we have not the slightest doubt as to the possibilities of the coffee industry in the future. At the same time there is not another industry that requires the exercise of as great care and intelligence in cultivation as coffee growing. The selection of suitable lands having due regard to quality of soil, shelter, and shade is an important matter with the beginner, but unless he also possesses a knowledge of the peculiarities of the plant itself he is liable to lose a great deal of money and time or end in complete failure before he discovers his mistakes. To those

contemplating going into the coffee business we would say select your district and then devote a few months of your time in finding out what others have done and their experience in the district you may decide to locate in. To those who may decide to locate in Puna we belive Mr. Rycroft would be only too pleased to give them the benefit of his experience. Although he has made many mistakes he has learned to avoid similar errors in future and as we said before has demonstrated that coffee planting can be made a success in the district of Puna. Mr. Rycroft has put in a complete plant for the preparation of his coffee for market, which is extensive enough to meet the requirements of a numbers of settlers in his neighborhood for some years to come. That his methods of preparing coffee for the market are up to date is amply demonstrated in the fact that he sold his whole output in this city a few weeks ago receiving thereior the highest price paid this season.

To return to our visit to the coffee field, after the party had inspected the various plantings and learned much that was new to most of the visitors the return trip was made to Pohoiki. General Warfield was delighted with all he had seen and especially the delightful climate of Puna. Upon return to Mr. Rycroft's home a splendid luncheon awaited the party at which was served coffee prepared from beans grown on the premises and which General Warfield declared to excel any coffee he had ever partaken of. For ourselves, we had imagined we knew good coffee and often enjoyed what we believed to be a very superior cup but since partaking of Mrs. Rycroft's excellent brew we fear to return to our former decoctions so-called coffee. At all events we know of that we shall not again enjoy a cup of genuine good coffee until we have the good fortune to visit the home of Mrs. Rycroft. General Warfield was so much delighted with Mrs. Rycroft's coffee that he has ordered his next year's supply from Mr. Rycroft so that in future Hawaiian who visit the California Hotel at San Francisco, will find the most prominent item on the bill of fare, "Hawaii (Puna) coffee, *à la Rycroft*."

The district of Puna like almost the entire Island of Hawaii is exceptionally conducive to good health. We were informed that Mr. Rycroft has only twice in seventeen years had occasion to call in the services of a physician. We look forward to Puna becoming, within a very few years one of the most thriving districts in Hawaii.—*Hawaiian Commercial Journal and Maritime Report*, March 10

THE STANDARD TEA COMPANY OF CEYLON, LIMITED.

The fifth annual meeting of this company was held at the office, 25, Fenchurch Street, on Tuesday, April 21. The directors present were Mr. Alex. Brooke (in the chair), Mr. Norman W. Grieve, and Mr. William Rollo. Among those present were Mr H.L. Stables, Mr. R. J. Chippindall, Mr. Reginald W. Wickham, Mr. R. A. Bosanquet, Mr. John Anderson, Mr. J. L. Anstruther, Mr. Edward S. Grigson, Mr. E. F. Bosanquet, Mr. H. Atkinson, and Mr. S. Wilson.

The Secretary having read the notice calling the meeting, and the reports and accounts having been taken as read, the chairman said :—

Gentlemen,—I address you with feelings very different to those at our first meeting, when we were dependent for a dividend, while our tea was young, on what we deemed two somewhat broken reeds—bark and coffee. The former aided us then, but has failed us now altogether. Our first year it contributed towards our income above £2,000. This last year, 1895, it contributed nothing, some £5 or £6 in rely, less cost of cutting and transport. Coffee, on the other hand, as you will notice in the report, has kept up in quantity fairly and in price excellently, and realised by it almost as much as any year. It amounted to above 5 per cent. on the paid-up capital. However, we do not expect this year, 1896, to get even half the same quantity.

Meanwhile the estates are otherwise improving and maturing ; the tea plants are becoming or have become more matured, and the yield is increasing. The directors have been well served by their managers in both districts—Maskeliya and Uda Pussellawa—by Mr. Craib on Gouravilla, by Mr. Bagot on St. Leonards, and by others on the different estates in that district, including Mr. Henderson, who superintended Liddesdale and Eskdale long before the company were the owners, and left the end of last year, I am sorry to say.

The accounts I have no need to go through seriatim ; they explain themselves, but I shall be happy to answer any enquiries. Our debt, at one time considered by some financial authorities large, was brought into very modest dimensions on our last issue of capital. Exchange continued last year almost as favourable for the company as in 1894. It has since risen. Whether it will remain high or fall through Russia adopting a gold standard or other influence I will not venture to prophesy. In old days, when the rupee first began to drop and to affect our different Eastern exchange banks, the chairman at their annual meetings used to tell what the future was to be until they found that they were invariably wrong, when they dropped the subject. I will only remark to illustrate what an important matter it is to us, that on the scale of our drawings of 1895 a penny in the exchange means a difference of £1,000 to us.

However, as regards the past year, aided by coffee and a good exchange and increase of yield of tea, our profits have increased, and the directors have the pleasure of recommending a substantially increased dividend on a considerably increased capital. We began by dividing at the rate of 10 per cent., then after two years $12\frac{1}{2}$ per cent , putting by something to the reserve fund, but we have never written off anything for depreciation of machinery and buildings. We now propose a dividend, making for the year 15 per cent. We desire to write off for depreciation £1,500, and to carry £2,500 to reserve. No further purchase of estates has been made.

We have had one great loss in the year through the death of our old friend Mr. Peter Moir. He was my colleague when the Standard Tea Company was first conceived and started. As a director he was very painstaking, looking into all accounts and reports, both Ceylon and home accounts, most minutely, regular in his attendances, and prudent and enterprising in his judgment. In him I lost a personal friend whom I had known intimately for thirty-five years, and for whom my respect increased the more I knew him. He was, I think, the most straight and honest man I ever met. To supply his place several considerable shareholders suggested Mr. W. Rollo, and the remaining members of the board were very pleased when they heard that gentleman would join and give the company the benefit of his long and intimate acquaintance with Ceylon planting affairs and of his excellent judgment. They had the pleasure of appointing him under the articles of association, and I am sure the appointment will receive the unanimous approval of the shareholders. (Applause.) I beg to move that the report and the accounts be adopted.

Mr. Norman W. Grieve seconded the motion, which, after a few remarks from Mr. Wickham, Mr. Edward S. Grigson, and other shareholders, was unanimously carried.

The Chairman proposed, and Mr. Rollo seconded : "That a dividend of 10 per cent., free of income-tax, on the £56,000 paid-up capital be declared, which, with the interim dividend distributed July 18, 1895, makes 15 per cent. for the year 1895 ; that this final dividend be payable on and after April 22 ; that £1,500 be written off for depreciation of machinery ; that £2,500 be placed to reserve ; and that £709 7s 4d be carried forward to year 1896." The resolution was carried.

Mr. Grieve proposed and Mr. J. L. Anstruther seconded, and it was carried, "That Mr. Alexander Brooke be re-elected a director."

Mr. A. E. Maidlow Davis, C. A., of 24, Rood Lane, was elected auditor of the company's accounts for 1896.

Mr. R. J. Chippindall and Mr. Henry Atkinson proposed a vote of thanks to the chairman and officers, including Mr. E. S. Grigson, the V.A., under whose advice were made the purchases of the company's estates that have turned out so well. An acknowledgment of the vote and some interesting remarks by Mr. Grigson terminated the proceedings. —*H. and C. Mail*, April 24.

CEYLON TEA PLANTATIONS COMPANY, LIMITED.

ANNUAL MEETING OF THE PREMIER COMPANY OF CEYLON.

(*Special Report for the Ceylon Observer.*)

The annual meeting of the shareholders took place at Winchester House, Old Broad St., on Thursday, April 23rd.

Mr. H. K. Rutherford, managing director took the chair, supported by Messrs. Reid and Tod, Directors, Sir Wm. Johnson Bart Secretary, and Mr. G. A. Talbot, Estates Manager in Ceylon. Among those present were Messrs. Alex. Brooke (of Messrs. J. A. Hadden & Co.), W. H. Anderson Dangerfield, G. A. White, Lee, W. Mackenzie, Frank Walker, John Ferguson, J. Russel Grant, and A. G. Stanton.

The SECRETARY read the notice of meeting and report, a copy of which reached you by last mail, after which the Chairman spoke as follows, in moving the adoption of the report :—

GENTLEMEN,—I presume, as has been the usual custom, you will accept as read the Report and Accounts which have been in your hands for some time. On each previous occasion when we met you here, the Directors have had the pleasure of congratulating you on the increased prosperity of the Company's business, and the Board, in laying before you its Ninth Annual Report, considers it highly satisfactory that the continuity of that favourable state of affairs has been preserved. The Accounts shew a net profit for the past year of £51,927, or £3,324 in excess of that of 1894. The year which we are now reviewing was on the whole a favourable one as regards seasonable weather for the Tea bushes giving a good crop of leaf. and you will not fail to observe that the yield of Tea was the largest we have ever reaped being at the rate of 437 lb. per acre over the large area of 8,073 acres. The crop harvested from our own Estates was 3,530,737 lb. being an increase of over half a million lb. on the crop of 1894. We bought green leaf from which we produced 665,603 lb. of tea, and we manufactured tea for other Proprietors amounting to 1,110,564 lb. these two sources shewing a decrease of 78,000 lb. Our Factories altogether turning out a total of 5,306,904 lb. of tea. The gross average price received for the crop was 8.09d as against 8.84d in the previous year or a fall of ¾d per lb. and the rate of Exchange 15 18 3-32 d of a penny in our favour as compared with 1894.

It will not have escaped your notice, that not only the price of the Company's teas but of all teas from whatever source has had a downward tendency for some years back. This need not be a matter of surprise when we consider the largely increased quantities being produced both in India and Ceylon. The former country especially is at the present time opening out large areas of land under tea, and we must therefore look for a greatly increased production in the next few years from that quarter. It should, however, be a matter of satisfaction to all interested in the cultivation of British grown teas, to note the extraordinary increase of exports to countries other than Great Britain. For the year 1895 these countries took 38½ million lb. of British grown tea or 33 per cent. in excess of the previous year, and it is estimated that the current year will see a very considerable increase on these figures. This ever widening consumption gives us hope that the increased production will be taken off the home market and the further decline in price thereby stayed. The persistent efforts of Ceylon and Indian Growers in pushing their produce in foreign and colonial markets should not however be allowed to slacken and if steadily persevered in, may be crowned with a greater success than perhaps any of us at present foresee, and it is very possible, we may be able to look back on 1895 as the day of small things, and that we then had merely touched the fringe of the enormously greater consumption which will be found for British grown teas in our Colonies, Russia, and America, a few years hence Coming back to the more immediate affairs of our Company perhaps the most important item in our Accounts calling for special remark is our Reserve Fund. Last year this stood at £50,000 and we now propose to increase it to £70,000. It cannot, I think, be denied that it is in large measure owing to our having created such a substantial Reserve that our £10 shares stand to-day at £30. The Board has firmly adhered to the policy, indicated to you some years ago, of keeping the Reserve entirely free from the risks of our Tea business and the Accounts now presented to you show you how this money is employed. We have £35,741 in Securities, which would if realized bring us a substantial profit, and the balance has been utilized in the purchase and development of our Coconut properties. When we made our first investment in these, we told you we looked upon this form of employing our Reserve as an eminently safe and remunerative one, and the Board has no reason to change its opinion. As the sum invested has reached a considerable amount, it will no doubt be of interest, if I briefly explain our position with regard to this product. We have now 4 Coconut Estates, viz :—Andigama, Mawatte, Jakwilla and Sirangapathe. This latter property we had not intended purchasing until the beginning of this year and so bringing it into the 1896 Accounts, but as other parties were anxious to buy it, we had, in order to secure it, to take possession in December last. This Estate is equipped with machinery of the most approved type for producing fibre, and it comes to us as a going concern, for which we paid £19,411. Our manager estimates that for the current year it will yield a return of nearly 10 per cent., on this outlay, and that better results are likely to be obtained hereafter, when we have improved the Estate, by a higher system of cultivation. The other 3 Estates are not yet yielding returns, but we have every confidence that when they come into bearing, the profits will be satisfactory. We have arranged to plant up about 500 acres with coconuts this year out of our available forest land.

Engaged as we are in Agriculture, we are taught by the experience of every country and the vicissitudes which surround most products that are grown, that we cannot hope to escape the common lot, of having less prosperous years for our tea in the course of time. It is therefore needless to say that it is the duty of your Directors to provide in the good years we are fortunate at present in having, against the possibility of bad years. The fact that we are laying out half the Reserve in securities and half in such a safe product as coconuts tends in large measure to eliminate the speculative element, and to make the shares in this Company more in the nature of an Investment with an ever-increasing security. The public has not been slow to respond to the evident benefits of this policy, and shareholders have had a very solid advantage in the increased value of their shares as a setoff against any larger dividends that might have been paid them. The capital value of our tea properties you will observe is £5,223 less than what it stood at the previous year. There have been some minor additions to capital values, but the decrease is practically all accounted for by the amount written off for depreciation. and the sale of Balgownie estate. Allowing for the reserve ; the amount at credit of brought forward ; and the sum set aside for depreciation, our tea properties stand at £25 per acre fully equipped in every respect.

As you are aware, we have always refrained from laying before you our estimates of the current year, and you have invariably been content to receive the assurance of the board that your properties are being cultivated and cared for in such a manner

as not only to return you the best possible immediate results, but that they shall continue to yield as good crops in the future as we can be assured by an intelligent and careful system of husbandry.

You will now, however, I am sure, be anxious to hear what our Ceylon Manager, Mr. Talbot, has to say about the properties he has so ably managed on your behalf for the last 7 years. There is no man in Ceylon better qualified to speak with authority on the planting interests of that Island than Mr. Talbot who has devoted 25 years of his life to planting in Ceylon. I have repeatedly said from this place that much of our success is due to our Ceylon management and I am sure that while Mr Talbot takes his well earned leave at home, Mr. Masefield, who has again been appointed Acting Manager, will, in conjunction with the other members of the staff, perform their duties to our satisfaction as hitherto.

You will be asked later on to pass a vote for a small increase in the Directors fees, in order that we may have the advantage of Mr. Talbot's services on the Board while he is in this country.

Should any shareholder desire to ask any questions my colleauges or I shall be very pleased to answer them to the best of our ability. Meantime I would move "That the Report and Statement of accounts as submitted be received and adopted and that a final dividend of 8 per cent off the ordinary shares making 15 per cent for the year free of income tax be declared payable on and after 27th inst." (Applause).

Mr. HENRY TOD seconded the adoption of the report which was carried unanimously, the only questions put being by Mr. Dangerfield with reference to the Reserve Fund, remarking that the coconut estates opened out of this Fund were now called Investments and he presumed the profits from these would be henceforward included with the annual profits from the tea estates. He referred to some slight difference in the figures in two parts of the accounts, which he had no doubt could be explained.

Mr. RUTHERFORD explained that the discrepancy was due to the Sirangapathe Coconut Estate having had to be bought in December 95, in place of going into this year's account, as the directors had intended.

Mr. TALBOT then made a clear and concise statement as to the condition of the Company's properties in Ceylon. He said he would avoid detail but notice some of the chief points in the working of the properties; their policy had been directed to maintain the permanent value of their plantations rather than to extract from them for a certain number of years the maximum returns of which they were capable. This policy was seen, for instance, in their treatment of young tea. They took care that the maiden crops, by plucking lightly, should not be a burden to the trees, so that these were enabled to develope vigorously, up to their third and fourth year. They applied the same policy generally to any weak portions of their fields, so that such patches, being leniently treated should gradually gain full strength and be equal to the rest of the field. Another matter in which they had been careful was in the application of artificial manures. He could not help regarding such an application as, to a certain extent, living on capital, because artificial manures stimulated the trees to take everything they could out of the soil in a limited period. Their policy was rather to supply bulky fertilizers such as cattle manure, and for this reason they were looking ahead and planting up grass fields, as well as preparing cattle establishments, for all planters knew the value of cattle manure in dealing with our Ceylon tea soils. Another fact he would refer to was the utilization of water-power in their factories wherever at all possible, even at increased first expense. Other motors might be cheaper in the first instance, but, in the end, there could not be a more economical satisfactory or better way of working than with water-power. Turning to the Company's coconut estates, he might say that these had given him much more anxiety than his duty of tea supervision; because he was here dealing with the reserve funds of the Company which had to be very carefully invested, and entering on an industry which was regarded as peculiarly one appertaining to natives. He might say however that the estates bought for the Company were all good; and as the result of his observation he felt sure that Europeans could work coconut plantations better then natives and secure larger profits. Finally he would like to say a word with reference to the Company's Superintendents whose work he had closely watched for the past seven years, and he could safely say that no body of men anywhere in the tropics did their work more faithfully than the Superintendents in the employ of the Ceylon Tea Plantations Company. Their responsibilities had very much increased of late owing to labour anxieties and the difficulties about coast advances, more especially in securing a due amount of work during the rush of crop from such gangs of coolies as might be rendered more independant and uncertain through the effects of the advances' system. But he felt sure the Superintendents would continue to give their utmost attention to the interests of the shareholders. (Applause.)

RE-ELECTION OF MR. RUTHERFORD AS CHAIRMAN.

Mr. D. REID moved the re-election of Mr. Rutherford as Director and in doing so spoke in the highest terms of his devotion to the interests of the Company, to which he gave the best of his thought, time and strength. (Hear, hear.)

Mr. W. HERBERT ANDERSON had much pleasure in seconding the resolution. To have such a Chairman as Mr. RUTHERFORD was a special advantage to the Company, for he took care that everything was thoroughly up to date in his work, and, come what may, the shareholders might feel secure that Mr. Rutherford would watch over their interests with the same untiring energy as before. (Applause.) Resolution carried unanimously.

[Mr. Talbot was also elected to serve on the Board of Directors during his year of furlough.]

SMALL INCREASE TO DIRECTORS' FEES.

Mr. WM. MACKENZIE proposed a resolution that the total of the Directors' fees for the current year should be £700, and in doing so expressed his astonishment at the moderate amount hitherto drawn, and now proposed, considering the great prosperity of the Company and how much was due to the gentlemen at the Board. He referred especially to the work of their Chairman at home and their Manager in Ceylon, Mr. Talbot. Their estates were among the finest properties in Ceylon, in every way admirably managed, and they had now a very considerable reserve fund, the investment of which was also, in his opinion, carried on with great judgment. He would therefore personally be prepared to go further than the terms of his resolution, which, however, he had great pleasure in proposing. (Applause.)

Mr. LEE seconded,—Carried unanimously.

AUDITORS.

Mr. DANGERFIELD moved, Mr. WHITE seconded, and it was carried unanimously that Messrs. Harper Bros. be re-elected Auditors.

THANKS TO THE CHAIRMAN.

Mr. JOHN FERGUSON said before they separated a hearty vote of thanks to the Chairman for p esiding would, he felt sure, be approved of. The history of the Ceylon Tea Plantations Company was not only a credit to the Tea Enterprise in Ceylon, but had tended to the prosperity of the community, and had undoubtedly strengthened the credit of the Colony at large. (Hear, hear); and to Messrs. Rutherford and Talbot more than any others were due its continued sueeess.

Mr. ALEX. BROOKE (of Messre. J. A. Hadden & Co.) seconded the proposal, which he felt sure would be carried by acclamation. (Applause.)

THE ROYAL BOTANIC GARDEN REPORTS.

The yearly reports issued by the Director of the Royal Botanic Gardens, Peradeniya, are not, I think, quite creditable productions—scarcely worthy of our splendid Gardens and not altogether what the public seem to have a right to expect. They may serve the purpose of showing the Government how the little money is expended, but beyond, this the information, as a rule, is very meagre, and to the general public the details are trite and dry to a tedious degree. Compared with the periodical reports from many a less favoured locality the documents are decidedly uninteresting. Take Jamaica or Trinidad for instance, where Mr. Hart throws his whole heart into his subject, the result is an interesting and instructive report read and admired not only all over the West Indies but by every lover of tropical botany and practical planter in the Tropical World. In addition to this, Mr. Hart edits a Monthly Bulletin of miscellaneous information, which treats of every product in which the planter is specially interested, and chronicles in cheery style the results of careful experiments in cultivation.

Our Peradeniya reports are rather too much taken up by complaints as to the poverty of the soil and penuriousness of the Government. More money, more money, is the cry; and yet they suggest that it is beneath their dignity to continue selling plants to the public!

While fully sympathising with the talented Director under present circumstances, and remembering with admiration the labours of Dr. Thwaites and the legacies left to us by Gardner and Moon, yet, looking hopefully as I do to the future possibilities of Peradeniya, I am constrained to think that much more might be made of such a magnificent subject than we have been accustomed to receive.

Here is a garden of 150 acres, formed from the very cream of the Central Province in a moderately moist, forcing and delightfully equable climate—a garden in which some 4,000 species of the choicest plants on earth luxuriate and all this not only rent free but subsidised to the extent of about R50,000. And yet they complain!

Shades of poor Tom Edwards, Dick and Duncan, what a paradise this would have been for you!

I have said that too much of the report is taken up with trivial matters. Last year we had the compiler gravely exercised over the traspass of cattle, though such is the admirable situation of this Eden that the only vulnerable portion might be protected by a few hundred yards of barbed wire or prickly hedge. Last year a few ambitious ferns had grown on the top of the monument erected to the memory of Mr. Gardner, and the removal of these is thought worthy of special notice. Again, we read that "much labour is annually expended upon the extensive tract of these grounds known as the Old Arboretum, in weeding, pruning and planting, but we are unable to make much impressions on its wild character."

Would it be too much to expect that a few plots might be utilized here in a way to add considerably to the income of the establishment while adding to the interest of visitors? Say 10 acres of cacao of sorts; do. Liberian Coffee, do. Cocoa. I see nothing derogatory to the dignity of even the Royal Botanic Gardens in this while I could foresee R10,000 profit annually. In the Royal Gardens, Port of Spain, one sees little plots of remunerative Cacao, and coffee with model little appliances showing the planters and others how it ought to be done. Are we a together above this sort of thing in Ceylon? Too proud to earn or too conceited to learn.—*Cor.*

INTERESTING PLANTING NOTES.

Quite a severe drought, is again the report from most of the up-country districts this week, to the anxiety and discomfiture of all who risked planting with the first April rains. In Balangoda for instance the plants are said to look somewhat shaky. Here too the wind has already began to blow so strongly that one feels thankful for the precaution of shelter belts. On the upper ridges of this district particularly, the South-West is ushered in with hurricane force, reminding one of Wilson's bungalow—the New Galway of today—and poor James Wyllie who, on being asked by his V.A. on the morning after a terrific night, what he thought of it replied "On such nights as these I simply eover my head with the blankets and thank God I am not the proprietor."

What a change when we got over the ridge into Dikoya! Here it has also been dry during the week, but no wind to speak of and plenty flush. Further down the Valley into Ambegamuwa proper, all is now damp and dreary the thick mists drifting up from Kelani, and the flush somewhat checked for want of sunshine.

Upper Dimbula reports fine weather and first-rate flush, the total rainfall for the week being only ·13 and the mean temperature 70°. Coolies come dropping in from the coast but not in such numbers as to meet requirements and by no means in proportion to the advances sent. Planters are beginning to pull long faces over this labour question.

The "Perlie Karun" coolie has cropped up in Matale East and threatened to assault the manager of Dangkande estate who very properly ran the rascal in. The marvel is that Laurie could restrain himself.

Like Balangoda this district of Matale East has begun its annual blow. And in this respect the locality of Moncrieff ean give odds against most places and yet look at the tea giving 600 lb. per acre all round! Those who doubt that there is vigour in the soil of this famous old district should see the Grevillea trees planted a year ago now 15 feet in height.

Better than Klang moss pots this,—though by the way peat was the only effectual cure ever found for potato blight. Might it not also withstand the nearly allied leaf blight?—*Cor.*

May 1st.

We are now passing through, that interval of weather, which precedes the big South-West Monsoon. "The rain it raineth every day," accompanied by lightning and thunder. Yesterday at early morn, I roamed over some of the high patenas about here; the Monaragalla range of hills wore a veil of deep blue; the hills of the Bintenne low lands were dark looking, with misty clouds between them, not a breath of wind refreshed the mountain climber. Above, were long broad streaks of sky blue, with fleecy clouds, but no movement of any kind above me or below, The very birds forgot to warbling nature was in a dreamy mood, and one could not help contrasting the festive scene in country lanes, in the old country on a fine May morning, and the fragrance of the hedgerow hawthorne, and

wild rose, and the song of birds. Planters are busy these hot and steamy rainy days, for tea bushes are throwing out young leaves most luxriant. Pity coolies could not be retained on tea estates all the year round and work found for them, say manuring when not otherwise employed. Then *scarcity of labour would be almost unknown.* OLD PLANTER.

COLONIAL FRUIT AND FOOD PRODUCTS.

Should the dream of the Imperial Federationists ever be realised (and we of this journal most cordially wish all success to the movement) one of the first subjects to receive attention at the hands of whatever body may be constituted to consider the best means of making the federation effective, would have to be creation of new industries in spots favourable for the growth or manufacture of certain goods which both ourselves and our colonies now obtain from foreign sources. Any scheme of Imperial Federation would we presume, encourage the formation of committees of experts to cast about for the most likely districts within the boundaries of the Federation which could be drawn upon for supplies of the character referred to.

COLONIAL PRODUCTS.

The result of such methodical collection and discussion of information on this point would speedily show us that the mother country and her dependencies could be easily developed into a self-contained and self-supplying area for almost all, if not all, requirements. We are, for instance, at present dependent upon foreign countries for our orange supply. There is no reason at all for this. Our Australian and West Indian colonies could undoubtedly furnish all requirements. Scents and essences are now mainly obtained from abroad. Our Australian and South African colonies could certainly, if developed, furnish there commodities. The olive, a most important commercial product, could also be cultivated in many of our colonies, and such articles as eucalyptus oil, culinary essences, castor oil, crystallized fruits, including citron, orange and lemon, and, in fact, a large number of articles which we now obtain from countries over which we have no governing control, could be produced in our own colonies by an expenditure well within the means of the communities concerned.

THE NATION'S FOOD.

Some large sacrifice will have to be made in order to successfully establish Imperial Federation, and a very large sum of money indeed would be well invested in a truly imperial effort to render the members of the great British Empire dependent upon no outside source either for its food supplies or for its supplies of necessaries and luxuries, We are threatened on all hands with severe competition in our produce growing and our manufacturing trades, and, seeing that our Queen rules over immense tracts of country in which all our requirements could be produced by free labour, and under conditions which appeal to us in every way as a freedom-loving race, it is evident that any great scheme of Imperial Federation must contain a well-considered clause, under the conditions of which the possibilities of our dependencies as the source of all supplies for the great common wealth must occupy a foremost place. Our legislators have their hands full at present with matters of the gravest import to our Imperial interests, but such steps as can be taken by our great merchants to further the development of our colonies in the growth and preparation for the markets of such supplies as we have here indicated would earn the undying gratitude of their fellow countrymen. The very magnitude of the scheme, together with its comparative ease of accomplishment, should commend itself to all far-sighted Britons.

COLONIAL PROGRESS.

The progress of our Colonies can best be secured by developing their resources as rapidly as possible. There is no reason why we should be compelled to depend upon the foreigner for the major part of our food supplies, either in times of peace of war. There can be no ground here for jealousy in any shape or form, since in the future the continued strength and success of the British Empire will depend to a very great extent upon Colonial resources and aid. To expand our Colonies is an indirect way to strengthen the Empire, and in this sense, whatever exports they can send us should be welcomed by the community in the name of the English-speaking race. We have given some sound hints as to the course that might be pursued with advantage in this direction, but the subject is too vast to be dealt with in a single article, or a dozen either. From time to time we shall keep the subject under the notice of our readers and all interested in this question. As far as fruit and food products are concerned, there is a great field before the Colonial growers. The one thing needful is to develop these great branches of trade on sound commercial lines, and as far as we are concerned, we shall do our utmost upon every suitable occasion to furnish such suggestions as may, if acted upon, tend to consolidate the Empire by ensuring the prosperity of each individual colony.—*Fruit Grower, Fruitarer Florest,* April 22.

THE WYNAAD AND SELANGOR—ONCE BITTEN TWICE SHY.—We have been credibly informed—says *Planting Opinion*—that one of the reasons why Ceylon capitalists are not investing more freely in the Wynaad, is the recent collapse of the "Klang boom" in the Straits. We have referred to this fiasco more than once, so that we need scarcely point out that there can be no possible connection between the two cases. In Selangor there was a small garden of Liberian coffee doing excellently well on peaty soil of apparently identical character with the surrounding jungle. A number of Ceylon planters having put in hurried applications for land in the neighbourhood of the coffee-garden, Government sold the land by public sale, having made certain promises to undertake drainage works. Jungle was cleared and work was getting forward, when a personal inspection of the land by two experienced Ceylon men showed that the soil was utterly unsuitable for coffee, the peaty deposit being some twenty feet deep, while that on the small Liberian garden was only *two* feet deep, the subsoil being of excellent blue clay. All work was stopped, the land thrown up, and finally Government allowed the applicants to choose suitable land, of which there is really plenty elsewhere in the district. Now in Wynaad, a great deal has certainly been talked about the yields of certain quarter acre tea patches but they have got over that stage now and can point to several fine young estates doing as well as any perhaps of their age in India. To be shy of investing in Wynaad because certain lands in Selangor purchased in a hurry turned out to be bad, is a somewhat silly method of action. However, there is no doubt that a boom is by no means an unmixed good, prices are bound to be inflated and the assured collapse would do lasting harm to the district. Let Wynaad be wise and hasten slowly, too much advertising sometimes defeats its own object. After all, though we are assured that applications are contrary to our former belief—coming in very slowly indeed, yet if once a well-known man purchases in a large way, the others will follow like a flock of sheep. At present men think it better to wait and see if other men are investing.

OUR PREMIER TEA COMPANY.

It is very satisfactory in the interests of the Colony at large, as well as of the tea enterprise, to observe the exceedingly good account of the stewardship which Mr. Rutherford and his co-Directors were enabled to give to the shareholders at the meeting of the Ceylon Tea Plantations Co. on the 23rd ult. in London. This Company is wel entitled on every account to the first place in the long list of Ceylon Plantations Associations in the present day. It is one of the largest—if not the largest Tea Cultivating Company—in the world; it is the oldest in our Ceylon list; and it is among the most uniformly successful. It is interesting at such a time to recall the very beginnings of the Company and the plucky way in which the late Mr. David Reid—genial as well as specially shrewd and enterprising—and his colleagues in Railway Contracting and Engineering—Messrs. Rutherford and Tod, pioneered the way in "tea" on Mariawatte and other estates at a time when many of our oldest planters and merchants looked askance at the new product. We cannot but recall our own very first importation of tea-seed early in 1878—part of a larger consignment for Abbotsford,—which, on leaving for home, we left for a "practical" planter-partner to put in, in place of coffee, in an Ambagamuwa property; but which after vainly trying to sell in the Fort of Colombo, he took and put "the stuff" in, out of sight at the top of his coffee fields with no idea of utilising it for a clearing. We merely mention this little incident to show how narrow was the circle of believers in tea from 18 to 20 years ago. All the more honour, therefore, to the few—Messrs. Harrison, Leake and James Taylor, Sir Græme Elphinstone and the late Mr. David Reid and Mr. A. M. Ferguson, senr., especially—who led the way with the new product which has conferred such unexampled prosperity on Ceylon.

As regards the present position of our Premier Company, nothing can be added to the very explicit and admirable remarks of Messrs. Rutherford, Talbot and Wm. Mackenzie. If anything is calculated to send the shares of the Company still higher in value, it is the exposition of the policy which has guided the working management of the Company's estates. But it is noteworthy (as both the Chairman and Mr. Mackenzie pointed out) that while the £10 shares are now valued at £30, the actual average cost per acre of tea in the Company's books is no more than £25, or taking the current value of shares, £75 per acre—a figure which compares favourably with several other companies, more especially when the established well-equipped position of the Company's tea estates, and the large *Reserve Fund*, is considered. Indeed, it is time surely that the company should have "Coconut Palm" added to its title; for, such an addition, in view of all we know of the Company's investments in this product, ought materially to add to the stability of the shares and the future maintenance, if not increase, of dividends. Altogether, therefore, we have only hearty congratulation to tender all round—and notably to the working Superintendents and overseers—on the prosperous position of the Company—a prosperity that, as we said elsewhere, reflects to the credit of our planting enterprise at large and of Ceylon as a Plantation Colony.

THE INDIA-RUBBER CROP OF LAGOS.

Returns have come to hand from Lagos which substantiate the reports already published in *The India Rubber World* respecting the remarkable development of the crude-rubber industry, so recently introduced in that West African colony. It has been unprecedented in the history of the rubber trade, for within a single year from the first recorded exports Lagos has taken rank as one of the largest exporters of rubber in the world—second, in fact, only to Pará. A short time ago some figures were printed in this journal showing the increase in rubber shipments from the port of Lagos during the first half of 1895. Through the courtesy of her Majesty's acting collector of customs at Lagos, Reginald R. Gace, Esq., it is now possible to complete the record for the year—the first in the history of India-rubber in Lagos—as follows:

Months.	Pounds.	Value.			Average Value.		
January, 1895 ..	12,131	£ 1,213	10	3	£0	2	0
February ..	15,888	777	0	11	0	0	11⅔
March ..	26,316	1,419	7	8	0	1	1
April ..	39,763	2,078	16	6	0	1	0½
May ..	216,916	11,700	0	7	0	1	1
June ..	268,619	12,577	2	6	0	0	11¼
July ..	461,765	22,593	13	3	0	0	11¾
August ..	354,990	19,951	18	3	0	1	1½
September ..	673,160	36,172	19	9	0	1	1
October ..	1,059,158	57,117	1	10	0	1	1
November ..	983,394	52,802	13	0	0	1	1
December ..	948,404	51,488	9	4	0	1	1
Total, 1895..	5,060,504	£269,892	13	10	£0	1	0⅘

The Gold Coast Colony had previously been regarded as a notable example of rapid development in rubber production. But the export from that colony, though beginning in 1883, amounted only to 3,395,990 pounds in the calendar year 1893, according to the latest official figures received by *The India Rubber World* from Accra.

Samples of Lagos rubber began to reach the United States shortly after the first receipts from that colony in Europe, and of late there have been considerable receipts of it at New York, but inquiries in the trade bring out the fact that American manufacturers have as yet treated the new rubber with caution. Considerable time is always required for a new product of rubber to become known to the manufacturing trade and to establish a reputation. Lagos rubber has been used in English factories, however, and to some extent in Germany and Austria. Up to date the total product from Lagos has been shipped direct to Liverpool, where the quotations lately have been 1/3½ @ 1s 10½d. It is asserted in New York that Lagos rubber is good, and that it has been improved since it first began to arrive. It is classified as "oysters," "strips," and "buttons."

Whether the heavy production in this little English colony will be long maintained is a problem on which no one seems prepared to express an opinion. The output of Accra and Benguella rubbers is not as large today as in some past years. Then it is remembered that at one time Mozambique and Madagascar grades came forward in surprising qualities, but fell off in a short time, when the supplies near the coast had become exhausted. It is considered probable that the same thing will prove true of Lagos rubber, even if there should be enough rubber trees back of the coast to yield a permanent supply in smaller quantities. Already advices have been received of smaller receipts at the Lagos coast since January than during the preceding months. There are no water-courses in Lagos, as in the Congo country to facilitate the collection of rubber at points distant from the seaboard.—*India Rubber World*, April 10.

NEW TEA FACTORIES.

The Eastern Produce and Estates Co. are at present erecting a large tea factory on Halwatura estate, Kalutara, the property of the North and South Sylhet Tea Company. When completed the new factory will be capable of turning out three-quarters of a million lb. of tea per annum. The factory on Naminacooly estate, Passara, which in addition to serving the estate of that name will make the tea grown on Canavarella and Mousagalla estates, is also being erected by

the Eastern Produce and Estates Company. The building is well nigh completed and the installation of machinery is expected to arrive about August. The factory when working at full swing will have an output of half a million lb. per annum.

INDIAN PATENTS.

Applications in respect of the undermentioned inventions have been filed, during the week ending 2nd May 1896, under the provisions of Act V of 1858 :—

For improvements in the methods, machinery and appliances used for withering or desiccating tea leaf. No. 267 of 1890.—Charles Arthur Durton, manager, Lukwah Tea Company, Upper Assam, for improvements in the methods, machinery and appliances used for withering or desiccating tea leaf. (From 12 May 1896 to 11th May 1897.)—*Indian and Eastern Engineer*, May 16.

RUBBER STATISTICS FROM PARA AND WASHINGTON.

According to Reimers & Meyer's table of the exports of crude India-rubber from Pará and Manáos for 1895, it will be seen that the shipments again broke the record, the excess over the figures for the preceding year having been exceptionally large. The receipts at Pará for the calendar year were 45,438,442 pounds, and the shipments slightly more, or 45,788,613 pounds. The names of the leading exporters are given below, with the consignments for Europe and the United States, the figures representing pounds :—

In 1889 the percentage of the Pará shipments going direct to Europe was 42. The figures declined to 38 per cent in 1892, and advanced in 1895 to 46 per cent.

* * *

From the treasury department at Washington comes the revised official figures of the India-rubber movement for the United States for the calendar year 1895, which are presented below in comparison with the statistics for 1893 and 1894 :

Imports.	1893.	1894.	1895.
	lb.	lb	lb.
India-rubber........	39,634,706	35,370,889	41,766,774
Gutta-percha........	487,970	704,168	3,031,155
Total........	40,122,676	36,075,057	44,797,929
	$	$	$
India-rubber goods....	340,600	303,781	309,513
Gutta-percha goods....	50,001	53,173	75,962
Total..........	390,601	356,954	385,475
Exports.			
Boots and Shoes......	205,637	211,393	244,592
All other............	1,235,409	1,324,751	1,432,027
Total, domestic..	1,441,046	1,536,144	1,676,619
Foreign manufactures	169,622	4,097	7,574
	lb.	lb.	lb.
Crude India-rubber..	1,846,727	1,615,076	2,217,697
Gutta-percha	19,616	464,602	47,859
Total ..	1,866,343	2,079,678	2,265,556

With respect to the countries whence the crude India-rubber was imported the government statement supplies these figures, relating of course to pounds :—

	1894	1895
United Kingdom..	4,987,096	7,479,816
Germany	1,195,363	1,055,045
Other Europe	2,065,642	2,496,492
Mexico	129,038	158,419
Central America..	1,116,547	1 391,002
West Indies [Venezuelan] ..	32,646	30,758
Brazil	23,642,155	26,603,173
Other South America	1,594,781	1,748,778
Africa	122,217	56,023
East Indies	461,166	736,159
Other countries	24,185	11,089
Total India-rubber	35,370,889	41,766,774
Gutta-perch	704,108	3,031,155
Grand total	36,075,057	43,797,929

The last table which will be given here relates to the value of exports of domestic manufactures of India-rubber (including boots and shoes) for several past calendar years :—

Year.	Value.	Year	Value.
1886	$ 782,610	1891	$1,349,491
1887	845,096	1892	1,555,411
1888	833,126	1893	1,441,046
1889	937,497	1894	1,536,144
1890	1,175,151	1895	1,676,619

LEGAL REPORTS.

THE CITRONELLA OIL DISPUTE.

TREATT *v.* DOMEIER & Co.

In the High Court of Justice on Wednesday, Baron Pollock and Mr. Justice Day, sitting as a Divisional Court, heard an application in the matter of the arbitration between Mr. R. C. Treatt and Domeier & Co. The application was to have set aside the award of the arbitrators, and it was made at the instance of Messrs. Domeier & Co., for whom Mr. Joseph Walton, Q.C., and Mr. Hollams appeared. Mr. Treatt was represented by Mr. Chitty.

Mr. Walton, in opening the motion, said that the claim out of which the arbitration arose was one by Mr. Treatt against Messrs. Domeier & Co., and the question which arose between these gentlemen was whether Messrs Domeier & Co. were bound to take delivery of a quantity of citronella oil, an article made out of some kind of grass, which possessed a pleasant smell, and which was used for various purposes, such as scenting soap and other things. The terms of the contract being that if a dispute arose it was to be referred to the arbitration of two members of the Brokers Produce Association, the matter was submitted to Mr. Green and Mr. French. There was no dispute about the facts, and although

some evidence was taken by the arbitrators, it was taken at their own suggestion, and was the evidence of an analyst whom they thought it right to consult, and who turned out to be the same gentleman as Domeier & Co., had called as their witness. The contract was signed by the brokers, and was that they had bought to the order of Domeier & Co., the purchasers, about 2,000 lb. citronella oil in drums—"quality guaranteed equal to sample"—and any dispute arising out of the contract to be settled by arbitration. The question arose on the words in the contract, "citronella oil," which was the thing to be sold, and quality guaranteed equal to sample." The sample was a small bottle of the oil, and apparently it was all right, smelling all right and looking all right. Then the bulk was tendered, and it smelt all right and looked all right. The purchaser, as was the custom in these cases, analysed it, and it turned out that instead of being citronella oil, 66 per cent. of it was something else. It was adultered with 55 per cent. of kerosene, a mineral oil, and 10 per cent. of essence of lemon to correct the kerosene and give the compound a smell which very much resembled the smell of the right citronella oil.

Baron Pollock: Does citronella oil come from the citron tree?

Mr. Walton: Yes, I suppose so.

Baron Pollock: Lemon oil serves for a great many purposes?

Mr. Walton said yes, but this was not made from lemons, and the etymology did not indicate the real origin of the article, which was really made from a grass. In this case the seller had put more than half of kerosene, which had very little smell, and they added the 10 per cent. of lemon to give it the necessary smell.

Mr. Justice Day: Is "citronella oil" known in the market?

Mr. Walton said yes; it was dealt in considerably. In this case, when the purchaser found this out, he refused to take it, and said he had bought citronella oil——

Mr. Justice Day: Not something else made to look like it?

Mr. Walton assented. Then Mr. Treatt said, "But you analysed the sample," and no doubt they did, and it turned out that the sample was just as much a sham as the bulk was.

Mr. Justice Day: Then you say that the whole thing was a fraud.

Mr. Walton: No; I do not say that; but I say it was a sham. There is no suggestion of fraud against anyone; but the stuff was a fraud. I do not suppose Mr. Treatt mixed this stuff up.

Mr. Chitty: This "stuff" has been sold as "citronella oil" for the last thirty-five years in the London market.

Mr. Walton: There is no evidence of that.

Mr. Justice Day (to Mr. Walton): You are bound by it, if it is to sample and is marketable as citronella oil.

Mr. Walton: But the arbitrators refused to decide that question at all. The gentleman who appeared before them for Messrs. Domeier called attention to the law on the subject, and pointed out that it was not enough that the stuff should be equal in quality to the sample, but that it must correspond with the description.

M. Justice Day: It must be substantially the same article as the sample.

Mr. Walton said that it must be, first, citronella oil.

Mr. Justice Day: Marketable as citronella oil; but it may not be citronella oil.

Mr. Walton replied that the point was explained to the arbitrators by the solicitor who appeared for Messrs. Domeier, but they pooh-poohed it. There were many cases like this where goods were the same as the sample, but which did not answer to the description of the thing sold, and that was provided for under section 13 of the Sale of Goods Act. There was an implied condition that the goods should correspond with the description, and if the sale was by sample it was not sufficient that the bulk of the goods corresponded with the sample if it did not also correspond with the description. The same thing was dealt with under section 15 of the Act, which provided that in the case of a contract for sale by sample there was an implied condition that the goods should be free from any defect which rendered them unmarketable.

Baron Pollock: Your point is that it is not a question here of buying to sample, but of whether the article sold was the article delivered?

Mr. Walton said yes, and it was said by the gentleman who appeared on the other side that this statute did not apply to an article like citronella oil.

Barron Pollock: Why not?

Mr. Walton replied that he did not know, but at any rate that seemed to be said by the affidavit. The arbitrators were asked to deal with that question specifically, whether this was the thing that was sold; and they were asked to state a case, and they declined. They were asked to postpone their award so that application might be made for an order that they should state a case. But they refused, and what was done was this. The agent who appeared for Messrs. Domeier went off post-haste and took out a summons, which he served upon them at half-past four o'clock that day; yet, in spite of that, they made their award, which, he ventured to think, was an improper thing to do. The terms of the award showed that the arbitrators had not considered at all the question which had been put before them. They said: "We decide that the quality of the three drums tendered to the buyers is equal to the sample guaranteed to the contract, and these three drums must be taken by the buyers." They did not deal with the question whether the bulk—the drums—tendered contained what was known, and commercially known, as "citronella oil" or not. They only found that the quality was equal to the sample, and therefore that the bulk must be taken.

Mr. Justice Day: If it is "citronella oil," the only question remaining is, Does it correspond with the sample?

Mr. Walton said that what he complained of was that they did not say it was citronella oil.

Baron Pollock: Do you admit that they analysed the sample before they purchased the bulk?

Mr. Walton: No, my lord.

Baron Pollock: You do not contend that it must be pure citronella oil?

Mr. Walton said he contended that it should not be 60 per cent of something else. In one of the affidavits it was said that there was called Mr. Albert Domeier, who swore that he had had dealings in this oil for 35 years; that he had tested and examined the sample as he had done for 45 years—namely, by smell; and that by his smell he was recognised as one of the best judges of these oils in the world, and from his examination he was quite satisfied that the oil was citronella oil. What he (Mr. Walton) desired to say was that if the arbitrators had made an award saying that it was citronella oil, notwithstanding that it was so largely adulterated, he would not complain. The affidavit of Mr. Chance, which he had been reading, went on to say that he had pointed out to the arbitrators that Domeier & Co. had rejected the goods because they did not accord with the description, and that, if so, it was immaterial whether the goods corresponded to the sample or not; and he submitted that they were entitled to reject the goods, first, by virtue of section 13 of the Sale of Goods Act, because they did not correspond with the description in the contract of sale, and, secondly, by virtul of section 15 sub-section 2, because the goods contained a defect, rendering them unmerchantable, not apparent upon a reasonable examination of the sample. They had proved by witnesses that the samples were adulterated with 55 per cent. of kerosene and 10 per cent essence of lemon, and that citronella oil adulterated to that extent was unmerchantable as citronella oil, and did not come within the description of citronella oil and that Mr. Domeier's examination of the sample was a reasonable one. No evidence was called for Mr. Treatt, but Mr. Jones on his behalf had contended before the arbitrators that the Sale of Goods Act had no bearing on the matter. Mr. Walton argued that the question whether this was citronella oil or not had thus been distinctly raised, and that the arbitrators seemed to have taken the view that it did not matter if the goods were

equal to the sample. That was all that they dealt with in their award. Mr. Domeir in his affidavit said his firm contracted to buy this at 1s 8½d per lb., and that they found that the goods were not citronella oil, and not saleable or merchantable as such. Mr. Walton submitted that the questions the arbitrators had to decide were—first, whether this stuff was citronella oil, and second whether it was equal to the sample, which was not disputed.

Baron Pollock asked if Mr. Domeir analysed the sample.

Mr. Walton: No.

Baron Pollock: He trusted, like many other people, to his nose.

Mr. Walton: No doubt: but he was deceived by the essence of lemon,

Mr. Justice Day: The affidavit says that by his smell he was recognised as one of the best judges of citron oil in the world. His examination was "reasonable" from the commercial point of view.

Mr. Walton replied that that evidence was given to bring the case within section 15 of the Act which said that where there was a sale by sample there was an implied condition that the goods should be free from any defect rendering them unmerchantable, which would not be apparent on a "reasonable" examination of the sample. To bring it within that section he had to prove that reasonable examination. But the adulteration was done so cleverly that it deceived Mr. Domeier, even though he was so good a judge. No one had suggested that a mixture containing only 35 per cent of citronella oil, and tho bulk made up of kerosene oil, could be citronella oil.

Baron Pollock: If the arbitrators were satisfied that it was citronella, according to the custom of the trade, they might have said so.

Mr. Walton: And that would have made an end of the matter.

Baron Pollock: Their view was that it was merchantable citronella oil, but they did not say so.

Mr. Walton: They told Mr. Domeier that that was not necessary, and that the only question was whether the guarantee of the contract was satisfied.

Baron Pollock: Why did they not do it?

Mr. Chitty: Because they do not live in the Temple, my Lord, if I may make such an answer. They took the view that they subsequently decided the question.

Baron Pollock: Although they do not live in the Temple, they admit that there is 65 per cent that is not citronella oil, and yet it is marketable. It would be satisfactory even to those who do live in the Temple to know why they do so.

Mr. Chitty said that although they did not traverse the statement that there was 65 per cent not citronella oil, yet for all that the article was what was known in the market as citronella oil. When they wanted it chemically pure, citronella oil was sold in the market at 4s 8d per lb.

Mr. Walton; We do not admit that.

Mr. Chitty said he knew that; but it was the fact nevertheless, and this was sold at 1s 10d per lb.

Barou Pollock: That is my chief difficulty. It may be that this was citronella oil; but if so, why did not the arbitrators say so? They only said that this was sold by sample, and was according to sample.

Mr. Chitty replied that their Lordsips were not dealing with an award made by a lawyer. What tho arbitrators said was that the bulk was delivered in accordance with the contract.

Baron Pollock:—No, in accordance with tho sample.

Mr. Chitty said that if they had said it was in accordance with contract there would have been an end of this matter, and he submitted that in substance they had said so. The contract was to sell according to sample. The sample was delivered to this gentleman with the thirty-five-year-old nose of which he seemed to be so proud, and he took all his usual means of testing it. He had been in the habit of buying this oil from Treatt, and shortly before this transaction he bought 2,800 lbs. of it from Treatt, and a dispute about it arising, he went to arbitration upon it, and was beaten, and the goods had to be taken by the buyers upon appeal. For the pure essence of this grass, properly distilled, one had to pay 4s 10d to 5s per lb.

Mr. Walton said that that was contradicted, and that his evidence was that the price of the oil supplied by Mr. Chitty's client was never more than 2s.

Baron Pollock (to Mr. Chitty): You say they purchased 2,800lb. of citronella oil of a like description. Does that mean with 65 per cent. of other oil?

Mr. Chitty: Yes. He then repeated the terms of the arbitrators' award, and contended that the point whether this was or was not citronella oil was fully decided by the arbitrators, although they had not put it into their finding. If they had left out of their award the words "is equal to the sample," and had only said, "We find that the three drums must be taken by the buyers and paid for," it would have been a perfect award. The only technical fault was that they said "is equal to sample."

Baron Pollock: No; the objection is that there are two things the arbitrators have to decide, and they shy at one.

Mr. Justice Day: It looks like an attempt on their part to screen the fraudulent practices of the trade in selling a thing which is only 35 per cent. of the article describ.d.

Mr. Chitty: No. The point is, that this stuff has been sold as citronella oil for many years.

Mr. Justice Day: Fraudulently.

Mr. Chitty: Not fraudulently.

Mr. Justice Day: A thing that is 65 per cent. kerosene and 35 per cent. citronella oil, which it professes to be.

Mr. Chitty said that it was an article which, pure, sold at 4s 10d per lb.——

Mr. Walton: That is contradicted.

Mr. Chitty said that, pure, it was sold at that price; but here the purchaser was buying at 1s 8d per lb., and he must have known that he was not buying pure citronella oil. He had also been buying it for thirty-five years, and had tested this and previous samples by the smell; and everybody else in the City of London who dealt in this oil had been in the habit of buying it in the same way—by the test of smell.

Mr. Justice Day: They have all been imposed upon.

Mr. Chitty said no, not more than the people who bought flannelette thinking there was flannel in it.

Mr. Justice Day: If this is what is known by commercial pe ple as citronella oil there is no fraud at all. But that is what the arbitrators will not say. They seem to be screening the trade.

Baron Pollock: It is of the very essence of these arbitration cases that the arbitrators should find out questions laid before them, so as to give satisfaction to the parties. They should not say, "Oh, you tell us there are two questions; we think there is only one." I am rather inclined to agree with my learned brother that it is to screen the trade, but I will not put it so high. Yet here we find that the arbitrators are asked to decide a point one way or other, and they have not done so.

Mr. Chitty admitted that the arbitrators had not distinctly said that this was citronella oil in the commercial sense.

Mr. Justice Day: But they were asked to do so, and they ought to do so.

Mr. Chitty: Then it would have to go back. He then went on to argue that under the terms of the agreement for arbitration, which were under the rules of the Produce Brokers Association, Domeier & Co., not being satisfied with the finding of the arbitrators, should first have appealed to the Council of the Association before coming to this Court.

Baron Pollock then delivered the finding of the Court. He said there were two questions to be decided. The first was, Ought this award to go back on the ground that the arbitrators had not, in substance, decided the matter brought before them? It had always been a well-known rule of law that where goods were sold they must be of reasonably merchantable quality, in which case, whether the sale was by sample or not, there was always the previous question whether tho goods delivered were those which were contracted for. And in the Sale of Goods Act, where the contract was by description, the goods must correspond with the description. Where the goods were sold by sample as well as description, it was not sufficient that they corresponded with the sample if they did not also correspond with the description. In this case

the defendants said that the goods were sold not only by sample, but also by description, and that the plaintiff, in order to succeed, must prove that the goods delivered did correspond with the description of the goods sold. The arbitrators had not said so, and therefore this was an insufficient and imperfect award, and it was proper that it should be sent back. The other question was that under the terms of the arbitration agreement there was no appeal to this Court until after appeal to the Council of the Produce Brokers Association. On this point his Lordship held that it was perfectly consistent with the provisions of the Arbitration Act for the matter to have been brought into this Court.

Mr. Justice Day concurred, adding that for himself he should have preferred simply to have set the award aside in this particular case.

The question was accordingly referred back to the arbitrators, on the understanding that if any difficulty arose in getting the gentlemen who formerly acted as arbitrators to proceed with the matters, that difficulty should dealt with according to the rules of the Produce Brokers Association applicable in such cases. —*Chemist and Druggist*, April 25th.

DRUG REPORT.

(From *Chemist and Druggist.*)

London, April 23rd.

KOLA NUTS.—In spite of the recent large arrivals, the market seems to have gained some little firmness, and sales of fair quality East Indian kolas are reported at 8d per lb.

OILS (Essential).—Citronella oil slow of sale and easier on the spot as well as for arrival. Lemongrass quiet at 2½d per oz.

THE AMSTERDAM MARKET.

Our Amsterdam correspondent writes on April 21st, that the auction of Java cinchona-bark, to be held in Amsterdam on April 30th, will consist of 5,319 bales and 239 cases, weighing together 517,986 kilos. The bark is of rich quality, the average percentage of sulphate of quinine being 5·67 per cent of the total weight, representing a weight of 28,899 kilos of sulphate of quinine.

IS THE CAMPHOR-MARKET BREAKING DOWN?

Another penny-a-pound reduction in the price of camphor was declared on Monday by the English refiners. This lowers the quotation for bells in 20-cwt lots to 1s 10d per lb, and is the third drop within a month, the first having been declared by the English refiners on March 30th, when half-ton lots were lowered from 2s 3½d to 2s 1½d per lb. Such a persistent wasting-away of the quotations on the verge of the chief consuming-season is well calculated to fill the holders of stock with alarm, and make them doubt whether a general breakdown, which may reduce the price to about half its present figure, be not impending. One is often and complacently told that manufactured chemicals, such as morphia, quinine, and refined camphor, are now-a-days connected only with the slenderest of threads to the commercial movements of their parent-articles. We should hesitate to affirm that the assertion is true in any case; it certainly is not in that of camphor. The whole situation of that important drug during the past twelve months has turned upon the proceedings of the "Syndicate" which was formed about a twelve month ago, and of which we revealed the names and the policy in May, 1895. At the beginning of that year, before the Syndicate had entered the market, crude camphor—Formosa camphor—was offered freely at 79s per cwt., c.i.f terms, and although in March and April, ostensibly owing to the annexation of the Island of Formosa by Japan, there was a slight upward movement, that ripple would no doubt have died a natural death within a few weeks had there not appeared upon the scene a prominent firm of London drug-brokers who began to buy up, on account of three capitalists not in any way connected with the drug-trade, every parcel of camphor upon which they could lay hands. The operations of the Syndicate during the ten or eleven months of its existence have naturally been conducted with much secrecy, but occasional glimpses of light have been thrown upon its doings, from which it is believed that the three operators have bought among them about 40,000 packages of crude camphor, at an average cost of about 130s per cwt. Under the influence of the Syndicate purchases crude Formosa camphor (now the leading variety) rapidly rose from 115s per cwt. spot in April to 207s 6d spot in September. Then came a turn. The Syndicate may have become tired of buying, or its policy may have been changed, but the sudden sallies of the broker into the Commercial Sale R oms and his periodical raids upon daring counter-speculators who had to be cornered came to an end and no sooner did the Syndicate ceasc to buy than the market commenced to droop. Last week Formosa camphor was offering at as low a figure as 130s per cwt., c.i.f., but then the Syndicate broker once more put in an appearance, and supposed purchases on his part to the extent of about 3,000 piculs once more caused a temporary inflation. Now the broker is gone, and the market has fallen to pieces with him. The fact seems to be that the Syndicate have grievously miscalculated (if they considered at all) the available supply of the drug. Within the past four or five years the output of Formosa camphor has been quadrupled, and it is now tolerably clear that the Japanese occupation of the island, instead of diminishing, has greatly stimulated the production. The high market-prices caused by the operations of the Syndicate account for the increased production, and as the buying up of all available parcels would be a task exceeding even the powers of the three great capitalists who form the inner ring, the position of these gentlemen to-day is an extremely awkward one. Under these circumstances we should not be surprised if the report were true that the Syndicate have ceased to act in unison; that, some time ago, their camphor stock was parcelled out among the members; and that one of them has, by this time, quietly disposed of the bulk, if not the whole, of his share, while the others still hold on. The camphor-venture will probably, in the end, engulph that portion of profits on the copper speculation of the Syndicate which remains after the disastrous failure of its Zanzibar clove speculation and at any rate the names of the speculators will live in the drug market as those of gentlemen who, without any apparent reason, disturbed the course of the camphor market for a whole year. We should like to know, however, who, besides the brokers, has derived a pennyworth of good from all this buying and selling. Not the Syndicate, which has made no profit collectively from the venture, nor the refiners, who, besides being compelled to buy from hand to mouth, have most of them been obliged to sell at rates that cannot have been very profitable. The remaining Syndicate members hold between them an enormous stock of crude camphor (which is an undesirable article to keep in stock anyhow, because it loses weight rapidly); in fact, it is currently believed that the published London drug-statistics give but a very imperfect idea of the true quantity stored at various warehouses on Syndicate account. If the owners openly endeavour to realise this supply they will certainly knock the bottom out of the market altogether; if they continue to buy, their last state may be worse than their present one, for they must then be prepared to secure quantities that would tax even their huge resources. As for the refiners, they have to cope not only with second-hand holders, who are pretty well supplied but one of their own fraternity, who is among the largest

DEAFNESS. An essay describing a really genuine Cure for Deafness, Ringing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 19, SOUTHAMPTON BUILDINGS, HOLBORN; LONDON.

continental manufacturers, is apparently competing against them, and has just issued, through his London agents, a circular in which after quoting bells in 1 to 5 cwt. lots at 1s 10d per lb. (the other refiners' quotation of 1s 10d per lb. only applies to 10 to 20 cwt. parcels), he gives it as his opinion that it is pretty safe for buyers to take advantage of the presnt state of the market to lay in supplies ou that basis. To that view we should he very loth to subscribe.—*Chemist and Druggist*, Aprll 25.

DEATH OF MR. JOHN BUCHANAN BRITISH CENTRAL AFRICA.

Messrs. W. H. Davies & Co. write to us:—

We have received the following notice from Mr. Robert Buchanan dated Michiru, British Central Africa, March 14th, 1896:—"I grieve to intimate to you that I have received a telegram today, stating that my brother John Buchanan, who left here on the 2nd inst. for Europe was taken ill on the River Journey, and died in high fever, soon after reaching Chinde on Monday 9th March."

In the *British Central Africa Gazette* of the 1st ult. we read:—

We deeply regret to announce the death of Mr. John Buchanan, C.M.G., British Vice-Consul in this Protectorate. Mr. Buchanan had started to return to England with his wife and child. Upon reaching Chinde he became very ill, presumably with fever, and died in a few hours. Mr. Buchanan left Blantyre seemingly in good health. His illness commenced as he was travelling down the Lower Shire and culminated in this serious attack at Chinde which proved fatal.

It is hardly necessary to dilate on the loss to this community which is brought about by Mr. Buchanan's death. He was almost the only pioneer left of the first band of Scotchmen who took up the work which Livingstone laid down. Mr. Buchanan came out to this country, we believe, in 1876, having been appointed horticulturist to the Church of Scotland Mission stations. After a change in the Mission staff, which occurred consequent on a dissidence of feeling between the manag.ng committee of the Mission and its servants in Africa, Mr. Buchanan resigned his appointment and set up as a coffee planter. He was practically the first person to introduce the cultivation of coffee in a practical way. It was stated by the Commissioner in his 1894 report that Mr. Buchanan first introduced the coffee plant. There is some doubt about this detail—the priority of the experiment being credited to one or two other people—but for all practical purposes it is correct to say that "Mr. Buchanan started coffee planting in British Central Africa. Assuredly without his dogged perseverance and persistent efforts during some seven or eight years, British enterprise in this part of Africa would have perished stillborn, or would have been confined to the evangelising efforts of the missionary societies.

Though ceasing to be a lay member of the Church of Scotland Mission, Mr. Buchanan never lost his interest in Mission work, and being almost the best Yao linguist that this country has yet produced he was able to assist the Mission by translating portions of the Bible into the Yao language. He also maintained for years a school in connection with the Mission at Mlungusi. When Consul Hawes was transferred from the Nyasa Consulate to another post, Mr. Buchanan became Acting Consul and remained so until September, 1891. In the year 1889 he afforded great assistance to the Commissioner in making treaties with the native chiefs and in laying the foundations of the present British Protectorata. For these services he was made a C M.G. Upon the lapse of his appointment as Acting Consul he received that of Vice-Consul which he rotained up to the time of his death.

It would seem as though Mr. Buchanan, like so many others, had fallen, victim to the terribly unhealthy Zambezi valley. Only a few weeks ago he was at Zomba paying farewell visits and remarked to he writer of this notice that, although he was thet in good health, he dreaded tho journey to Chinde as he had never dreaded it before; he had an instinctive feeling that he would suffer severely in passing through this malarial district, and referred to the analogous case of the late Mr. Monteith Fotheringham as one which had caused him considerable uneasiness.

There is no doubt that this fact of the 200 miles of unhealthy Zambezi-Shire marshy country, which is our present road to and from the coast, is a most serious obstacle to the satisfactory settlement of British Central Africa. The days and days which are passed in uncomfortable little steamers in these fetid marshes are quite sufficient explanation of the deaths which occur from time to time amongst the people arriving at Chinde. Chinde itself is not an unhealthy place, neither is Blantyre, nor Zomba, nor many other settlements in the highlands of British Central Africa. It is the intervenning malarial lowlands that cause so much damage with their generation of poisonous malaria In the days to come, when the railway is made from Blantyre to Quelimane *via* Chiromo, and when in one day we can pass from our healthy highlands to a comfortable ocean-going steamer, the dangers of residence and travelling in British Central Africa will be almost at an end.

VARIOUS PLANTING NOTES.

Fibre Machinery.—We would draw attention to the advertisement in another column on this subject. Mr. Lehmann has, we learn, made the largest coir fibre plant for the West India Fibre Company, an American concern, ever ordered, to produce per day 10 tons of fibre for spinning and mattress purposes.

Tea Company Dispute.—In February last the Dimbula Valley (Ceylon) Tea Company, Limited, was is sued with a capital of £200,000, and it met with a very good reception amongst investors. According to the last mail advices from Ceylon, a difficulty has a risen in connection with the sale of the Belgravia and Elgin estates to the company, and Sir John Muir, who has been in the Dimbula District, is understood to have telegraphed to England to stop the transfer of the property until his arrival home. In the meantime the sale was completed, and the estates have been worked for the company.—*City Leader*, April 25.

Tobacco in India:—In an article in the *Pioneer*, it is pointed out that not only has India's export trade in the raw article fallen away, but also that the trade in the manufactured article remains practically what it was 20 years ago, *i.e.*, confined to insignificant dealings with the Maldives, the Straits Settlements, Ceylon and Arabia &c., the total value, of which in 1894-95 was R34,382. On the other hand imports of manufactured tobacco (other than cigars) valued in 1893-94 and 1894-95 at 17¾ and 14½ lakhs respectively have about trebled in value during the above-mentioned period. The only satisfactory feature is stated to be the rapid progress made in the export trade in cigars, which during the past ten years has increased from 230,924 lb. and valued at R158,892 to 593,539 lb. valued at R6,08,944 (in 1894-95) the United Kingdom being the chief ma ket.

The Best Soaps for Warm Climates are CALVERT'S TOILET SOAP (6d. Tablets) and PRICKLY-HEAT SOAP (6d. and 1s. bars), pleasantly perfumed, for Bath or Toilet containing 10 per cent. of Pure Carbolic. Very serviceable as preventives of Prickly-heat and other skin irritation. Sold at Chemists, Stores, &c.

F. C. CALVERT & CO., Manchester.

COLOMBO PRICE CURRENT.

(Furnished by the Chamber of Commerce).

Colombo, May 19th, 1896.

THE

AGRICULTURAL MAGAZINE,

COLOMBO.

Added as a Supplement Monthly to the "TROPICAL AGRICULTURIST."

The following pages include the Contents of the *Agricultural Magazine* for June :—

Vol. VII.] JUNE, 1896. [No. 12.

SEASON REPORTS.

WESTERN PROVINCE.—The preparation for yala rice cultivation has been delayed in some villages owing to the drought, but the harvest prospects are generally good. The supply of fruits and vegetables are good, except in the Negombo district and some parts of Pasdun Korale (Kalutara).

CENTRAL PROVINCE.—Maha crops harvested with satisfactory results ; operation for yala cultivation proceeding ; fruit somewhat scarce in Nuwara Eliya. *Stock.*—Foot and mouth disease prevailing in Walapane.

NORTHERN PROVINCE.—Harvesting over in all parts except in Mullaittivu and Vavuniya districts, where paddy is being reaped and thrashed. Crops good. Some of the paddy lands are being ploughed and manured. Dry grain in ear, harvesting has commenced in many places, crop attacked by worms, tobacco being harvested and cured. *Stock.*—Cattle plague and foot and mouth disease reported from Vavuniya district.

SOUTHERN PROVINCE.—Yala cultivation proceeding, sowings retarded in some places owing to drought. Late second maha crop is being reaped in Hambantota district with indifferent results. Fruit and vegetables fair, and in Giruwa Pattu vegetables plentiful. *Stock.*—A few cases of foot and mouth disease in Giruwa Pattu.

EASTERN PROVINCE.—Paddy being harvested crops not so good as last year owing to rain and insect blights ; in Trincomalee yield is fair except in Koddiyar Pattu, where the crop has been partially damaged by insects. Dry grain harvested in Trincomalee with a fair yield.

NORTH-WESTERN PROVINCE.—Maha crops harvested and yala sowing going on. *Stock.*—Cattle plague prevailing in three of the Korales of Kurunegala district.

NORTH-CENTRAL PROVINCE.—Yala cultivation going on. *Stock.*—Cattle plague still prevailing.

PROVINCE OF UVA.—Paddy plants thriving well, crop prospects good. Fruit and vegetables plentiful except in Wellawaya, Bintenne and Udakinda. *Stock.*—Foot and mouth disease in Udakinda.

SABARAGAMUWA PROVINCE.—Second maha crops being harvested and operations for yala cultivation has begun in favourably. *Stock.*—Cattle plague in Beligal Korale.

Greatest amount of rainfall in any 24 hours on the 3rd May, 2·34 inches.

Recorded by M. W. K. BANDALA.

OCCASIONAL NOTES.

We would draw special attention to the paper on "The Forest Laws of Ceylon" which is commenced in the present issue. Forest law is one of the subjects in the curriculum of the Forestry School, and the publication of this paper, in the pages of the Magazine will bring it within the reach of all those who are interested in the subject both in the Forest Department and outside it. The paper when complete should be very convenient for reference to students of the Forest School and others.

We regret that a letter by Mr. Zanetti on Pruning and W. A. D. S.'s second contribution on "Minor Industries" have been crowded out of the present issue; they will appear in our next.

We have had many enquiries from those who have apparently not had the opportunity of acquainting themselves with the provisions of the Dairies Ordinance regarding the obligations which it imposes on dairymen, milk vendors and the like. For the benefit of such we may briefly summarise the clauses which specially deal with these obligations:—Every dairyman and milk vendor is required to register at the Municipal Office his name and the address of his residence and place of business. Three months' time is allowed for registration to those already engaged in the milk trade, but after the Ordinance comes into force previous notice is required from those intending to start business. All registered persons are required to affix to dairy and milk store, cart or other vehicle for distributing milk, their names and the words "registered dairyman" or "registered milk-vendor," and it will be unlawful for unregistered persons to sell or supply milk within Municipal limits. The occurrence of infectious disease in dairy premises or milk stores must be immediately reported to the Municipal Council. Whenever called upon by the Chairman of the Council, dairymen or milk vendors must be prepared to supply the names and addresses of their customers, and further help to ascertain their residences. Persons suffering from infectious diseases or having been recently exposed to infection are debarred from participating in dairy operations in any capacity. The sale and supply of milk stored in sleeping or dwelling-rooms or apartments rendered unwholesome from whatever cause, is forbidden. The penalty attached to any infringement of the above regulations is a sum not exceeding R200. The provisions of the Ordinance apply to dairymen, milk-vendors, dairy farmers, cowkeepers and purveyors of milk, whether resident within or without Municipal limits, and to dairy premises, milk stores and milk shops whether within or without the Municipal limits, by whom or from which milk is sold or supplied to persons within Municipal limits, and also apply to occupiers of dairies and milk stores or shops.

Since its foundation in 1884 the School of Agriculture has developed greatly, not so much by its own growth, for such growth, if it were possible, has been limited, owing to admissions into the school having been limited. It would perhaps be more correct to speak of the extension of the school by the grafting on to it of a number of other branch institutions. The first institution which brought about this expansion was the Colombo Training School, for the training of Government vernacular teachers, which was established in connection with the School of Agriculture with the idea of bringing the future teachers of the native population under the influence of agricultural education, while undergoing their technical training as schoolmasters. With the Training School came the Practising School—a vernacular day school—as a necessary adjunct to the former. Next came the Government dairy—a large concern in itself—which is, of the various additions, most nearly an outgrowth of the original institution. Later on followed the extension of the dairy itself and its connection with the Model Farm: and as regards land acreage it is interesting to note that from a garden of some dozen acres, the extent now pertaining to the school is nearly 275 acres. At one time the idea of working the Technical School in connection with the School of Agriculture was thought of, but was ultimately abandoned as impracticable. The latest and not the least addition we have to refer to is the Forestry School, and we have little doubt that with the many interests which Agriculture and Forestry have in common, the connection formed will be to the mutual benefit of the two allied schools of Agriculture and Forestry.

The new Forestry School at the School of Agriculture was opened on the 15th May last. The classes to be held during the present year are Forestry (conducted by Mr. Broun, the Conservator of Forests), Forest Law (by Mr. Morgan de Saram, Advocate), Surveying (Mr. Dyson Blair, Municipal Surveyor), Mathematics (Mr. Walter Parys), and Botany (Mr. C. Drieberg, Supt., School of Agriculture). For the present six students have been admitted, three of whom have been drafted from the Forest Deparment, viz., Messrs. Jansz, Gaiagode and Jayman. Three other students have been chosen after a preliminary examination by the Director of Public Instruction: these are F. C. Fernando, H. P. Ratnayake, and B. M. Mendis. A suitable part of the school has been set apart for the Forestry classes, and the nucleus of a Museum already exists in the large collection of Ceylon woods presented to the School of Agriculture last year. Accommodation has been provided for the Forestry students on the premises, as they will all be resident students. Altogether the arrangements made for the Forestry school appear to be satisfactory, and we heartily wish the new institution sucess.

We have to congratutule Mr. E. T. Hoole, 2nd Assistant, Colombo School of Agriculture, on having successfully gone through his Veterinary course at the Bombay Veterinary College. Mr. Hoole will make the second native Veterinary Surgeon in Ceylon, and we wish him a long and useful career in the Colony.

In another column we make an important extract from the *Indian Agriculturist* headed "The Cause of Rinderpest." The agricultural community of the East will never cease to be thankful to Dr. Simpson, Sanitary Officer, (or Health Officer as the official is called in India) of Calcutta, if he succeeds in what he hopes to do, in the way of combatting the dreadful epidemic known as Rinderpest, cattle plague, or (as it is loosely

termed in Ceylon) "murrian." The labours and achievements of Dr. Simpson—who, by the way, was a visitor here not very long ago— may well put our Veterinary Surgeons to the blush. "With the microbe now in our hands," says this benefactor of the agriculturist, "I consider it to be merely a matter of time to prepare a vaccine which shall not only be protective, but which shall also give us control over the disease." For the present we can only heartily congratulate Dr. Simpson and wish him further success in his bacteriological researches.

The quarantine premises of the Government dairy were declared an infected area on the 16th ult. owing to the occurrence of foot and mouth disease. We are glad to state that the dairy stock are once more in good health.

THE GOVERNMENT STOCK FARM AT TRINIDAD.

We have for the first time seen a report on the working of this institution. This report is of special interest to us, since it was his experience of the Trinidad dairy that led our late Governor, Sir Arthur Havelock, to suggest and afterwards sanction the establishing of the Ceylon Government Dairy. The interests of the Trinidad Stock Farm are more varied than those of the Ceylon Dairy Farm, inasmuch as while the latter confines its operations to the production of a supply of wholesome milk for use in Government hospitals and the breeding of superior stock, the former is further concerned with horse-breeding and poultry-keeping. As concerning us more nearly we shall confine our remarks to that part of the report which deals with the working of the cattle farm.

The year 1895 was, we note, a successful one both financially and as regards health of stock. 133,308 quarts of milk were produced at a cost of R3·87 cents (very nearly 8 cents in local currency) and supplied to the hospitals and jail: there being an increase of 22,053 quarts of milk over the previous year's output. The daily average of the cows milked was 73, yielding just 5 quarts daily per cow throughout the year. This is truly said to be a good average yield for the tropics, taking as it does into account heifers with first calves and drying-off cows. The following is the daily diet of artificial food per cow—totaling 8 lbs.—and given as a thin mash: Feeding flour, 2 lb.; ryemeal. 2 lb.; cotton seed meal, 1 lb.; coconut meal, 3 lb, The term "feeding flour" is new to us, and we are unfortunately unable to make out to what particular form of food it refers to. The feed is divided into two meals and given at 6 a.m. and 2 p.m. Except at milking hours the cattle are in the pastures, sunshine or rain. The manager is of opinion that coconut cake, no doubt the same as our "poonac," is not appreciated sufficiently in Trinidad, and that it ought to be very much more used than it is. The Ceylon coconut cake is the ordinary diet of working bullocks and has little reputation as a diet for milk cattle. The Government analyst reporting on the milk of the herd remarks: "The milk from the general herd is of first-class quality or slightly superior to the milk of English dairies." It is interesting to note that a cow from the farm won the first prize at the Agricultural Show of the year for cows giving the best quantity of quality of milk. The animal, described as a cross-bred zebu, yielded at the trial 21 Imperial pints. For breeding purposes a red polled bull was imported from England at the high cost of £64, but owing to the effects of the climate the animal has turned out almost a complete failure. The manager refers to what seems to be his only trouble with his cattle—viz. the attack of the larva of a fly which has been identified as *Compsomyia macellaria.* In this connection we have another advertisement for the well-known disinfectant so commonly used in all dairies, for, says the manager, "As a remedy to destroy the larva, I find Jeye's fluid the best and cleanest." When we read that "the health of the stock was perfect throughout the years" we are led to think that Trinidad must be a particularly healthy colony for stock, or that the care of the health of the animals must be in very good hands. Altogether the report under notice is a very satisfactory one, especially as regards the cattle farm. We are not surprised that our late Governor should have suggested the establishment of a Government Dairy in Ceylon after his acquaintance with so successful an establishment as the Trinidad Stock Farm. We heartily congratulate the manager on the good results of his work.

EXPERIMENTS WITH PADDY.

The following extract from the Annual Report for the year 1894-95 on the Burdwan Experimental Farm, dealing with the results of experiments in the manuring of paddy with different fertilizers is of local interest:—

The experiment with paddy has been carried on for four years with the ordinary variety of transplanted winter (*aman*) paddy commonly cultivated by the ryots of Burdwan, the amount of seed sown being also the same as that ordinarily used by ryots, *viz.*, 15 seers per acre. The soil on which this experiment has been conducted consists of a rather heavy loam, such as prevails in the neighbourhood. The treatment of the lots is noted below:—Ploughings, 5; harrowing, 1; weeding, 1; and hoeing, 1. The manures supplied and the results obtained in the last two years are given in the following statement:—

Number of plot.	Area in cottahs.	Treatment with reference to manure. Quantity applied per acre.	Mds.	s.	c.	OUTTURN PER ACRE. 1893-94. Grain.	1893-94. Straw.	1894-95. Grain.	1894-95. Straw.
						lbs.	lbs.	lbs.	lbs.
64b	6¾	Cowdung	150	0	0	3,641	4,388	3,291	4,287
65b	9	Unmanured	...			1,343	1,714	1,330	1,577
66b	9	Castor-cake	6	0	0	3,334	4,114	3,195	4,251
67b	9	Cowdung	150	0	0	4,443	5,691	3 840	5,279
68b	9	Unmanured	...			1,646	3,291	1,467	2,743
69b	9	Bonemeal	3	0	0	4,521	6,295	3,826	5,993
70b	9	Do	3	0	0	3,703	5,801	4,637	6,267
71b	9	Unmanured	...			1,786	2,332	1,574	2,061
72b	9	Bonemeal Saltpetre	3 0	0 30	0 0	4,690	6,308	4,673	6,377

N.B.—Plots 64*b* and 67*b* received 100 maunds and 50 maunds of cowdung respectively last year on Dr. Leather's suggestion, instead of 150 maunds per acre as in previous years.

It will be seen from the above that the highest outturn, *viz.*, 4,673 lbs. of grain and 6,377 lbs. of straw per acre during the year under reportwas obtained from the application of an admixtureof bonemeal and saltpetre. This result corroborates those obtained in previous years. The outturn of the unmanured plots during the year amounted to 1,457 lbs. of grain and 2,127 lbs. of straw per acre.

THE FOREST LAWS OF CEYLON.

The earliest law on this subject is the Regulation No. 2 of 1822. "For the protection of the "Revenue of Government derived from Timber "growing in the Royal Forests and for imposing "a tax on Timber felled in private Gardens." Timber, whether cut in the Forests of Government or in land the property of Individuals was liable to a duty of 1/10 of the value thereof, save and except Jakwood, which was liable to a duty of 1/5. Timber could not be cut without a license having previously been obtained. This license specified the number of trees to be felled and the place where and the time when the same were to be felled. The Collectors of each district were empowered to fix places to which the timber was to be brought to be valued or the share of Government to be taken, in order that there might be proof that the Regulation was being complied with, and in cases where this could not be conveniently done, the Collector was empowered to send proper persons to inspect and value the same. Such timber as was not taken for the use of the Crown was branded with a particular mark, and such as was taken for the Crown with another distinguishing mark. Timber cut without a license was liable to confiscation, and the person cutting the same was liable to fine and imprisonment. This Regulation was restricted and did not extend to palmyra timber or to coconut or areca trees, firewood, bamboos or other wood usually understood as timber fit for building or for carpenter's or joiner's use.

After this came the Regulation No. 1 of 1833, which repealed the Regulation No. 2 of 1822 and made other provisions in lieu thereof. This Regulation was in the same terms as the previous one, but with some alterations. The terms of the license were enlarged. In addition to the above provisions, the license contained the "terms and conditions" on which the timber was to be felled. The punishment was also altered. A breach of the Regulation subjected any person to a fine or in default of payment of the fine to imprisonment subject to hard labour.

Then followed the Ordinance No. 21 of 1848 "to regulate the felling and removal of "timber grown on the Crown lands in this Island." This Ordinance also related to the removal of timber felled on Crown land. It prohibited the cutting of timber on Crown land without a license from the Government Agent or Assistant Government Agent of the province in which such land was situated. The terms of the license were the same as beforementioned. The license was directed to the headman of the district in which the land was situated and was liable to a duty leviable according to the description of the timber. An additional precaution was adopted; for the licensed person was bound, before felling timber, to produce the license to the headman to whom it was addressed and to furnish him with a list of the names of the persons whom the licensee intended employing to fell and remove the timber specified in the license. After the timber was felled it was necessary to obtain a *permit* from the headman for the removal of the timber, which permit was issued after due inspection that the timber had been felled conformably with the license; a duplicate of this permit was to be forwarded by the headman to the Government Agent or Assistant Government Agent who issued the license. This Ordinance also required a *permit* to be obtained for the removal of timber felled on private lands; but the Governor was empowered by *Proclamation* to exempt any district from the operation of this enactment. Jurisdiction was given to the Police Court to try and determine any question of title to land; but this decision was to be no bar to any were proceeding in a civil suit in which the title to such land might be put in issue. Certain trees exempted from the operation of this Ordinance.

(To be continued.)

TOMATOES.

A Correspondent to the *Journal of Horticulture* deals with the failure of Tomatoes (due to a fungus, Sclerotinia sclerotiorum) by the roots becoming more or less rotten and the stems often dead at the collar. He recommends that the soil in which the plants are grown should be soaked with either Jeye's fluid, Little's soluble phenyle or lysol, a German preparation, at the rate of three gallons of solution per square yard, half a pint being employed to that amount of water. The surface should be loosened with a fork so as to let the solution enter evenly, and after letting rest a day should be turned and mixed to a depth of 18 inches. According to accepted views this cannot act on the sclerotia, but it cures the worst cases, especially if the plants at setting-out time are watered with a solution of a strength of 1 oz. to a gallon of water, and that amount given to a circle described a foot all round the plant. In ordinary cases this latter precaution is all that is necessary, but to stave off possible mischief later on, supply a solution, 2 ozs. (a wineglassful) to three gallons of water, two or three times at intervals of about three weeks or a month. The dressings have considerable manurial value, and are equally efficacious against "drooping" disease, as caused by Fusarium solani and eelworm.

Another plan, and considered by some quite as curative, is to dress the soil with quicklime, using a peck per rod, slaking with the smallest amount of water necessary, spreading and mixing with the soil to a depth of a foot. This and burning the diseased stems and roots, and giving the soil where the plants have been an extra dressing of quicklime at the time of removal, has been found an excellent preventive of both Sclerotinia and Fusarium solani, and also of eelworm.

A successful Tomato-grower who contributes some notes on Tomato culture to the *Journal of Horticulture*, recommends the following compost: Three barrows of turf of an open nature cut from the roadside, one of fresh horse-droppings, a bushel of charcoal and a bushel of wood ashes. For giving the young plants a good start it is recommended that they should be grown in a mixture

of two parts loam one of leaf mould, with a little charcoal and woodashes. The compost which is used later on to induce fruiting should be prepared early and allowed time to mellow for use when required. In addition to occasional top-dressings a handful of blood manure is recommended for each plant.

THE DAIRY.

Cleanliness in the dairy must be understood to include other considerations than the exclusion of injurious microscopic bodies, and an instance of this truism appears in the following account of a comparatively recent experiment made in Denmark by M. Boggild, the "expert" of the Royal Danish Agricultural Society. A sample of milk from a creamery was sent to M. Boggild for analysis. Even before the milk had turned sour it had acquired a very bad smell, and a taste somewhat analogous to that of tallow. The farm whence the milk originated was found to be not only well conducted, but one which had a very good reputation in its district.

Nevertheless, M. Boggild observed that a tank employed to receive the milk was rusty, and, as he remembered having once before met with an analogous abnormity in milk from a farm where he had also observed a similar rusty receptacle, M. Boggild suggested to the farmer, as an experiment, to purchase another tank to be used side by side with the rusty one. The experiment was made, and whereas the milk became tainted as before in the old case, the milk placed in the new tank retained its normal qualities.

This result appeared convincing enough, but M. Boggild made it conclusive by further investigation with a view to ascertain whether it was rust itself that caused the mischief, or whether it might be due to bacteria, which, through inadequate cleansing, might also be present in the rusty vat.

To this end, therefore, it was not only thoroughly washed, but also steamed, so as to kill any contained micro-organisms. But even this precaution did not protect the milk, which was afterwards placed in the still rusty vat. M. Boggild also found it on analysis to contain a comparatively larger quantity of iron, which, moreover, increased in proportion to the extent of rusty surface covered by milk.

It was also shown that the butter made from this milk acquired its characteristic taste. This observation serves as an additional proof of the necessity to use only dairy utensils which are clean in the strict sense of the word.

Warts, we read in *the Cable,* are contagious, and a milker with a warty hand may very likely cause them to come on the cow's teats. The remedy for man and animals is to apply any caustic preparation to the wart until it is corroded away and a raw spot is made in its place. Then apply calomel to the raw surface and protect it with a bandage until healing is completed. When a milking cow is troubled with warts on the teats, and there is difficulty in milking, a silver tube should be used to draw out the milk, which will flow when the other teats are milked.

We read of the following being given to cows in Oudh to bring them into season: Wheat, 1 seer; Hyocyamusniger, 1 oz.; liquid curd, 2 seers. These are mixed together in an earthen pot which is closed and buried in an old dung heap for a week. When well fermented it is dug out and the mixture given to cows in two or three instalments.

M Arnault, the director of one of the largest dairies in Paris, firmly believes that food does tell on the yield and richness of milk. German authorities are of opinion that food has no influence in determining the amount of butter in the solids of milk: that attribute, they state, depends entirely on the temperament of the cow alone.

Milk contains from 10 to 14 per cent. of solid matter, consisting of 2·50 to 6·90 of butter fat, which is insoluble, and the rest of a matter which is not fat but is soluble.

THE NUTRITIVE PROCESS IN PLANTS.

Prof. J. Reynolds Green, D.Sc., F.R.S.
(Continued.)

But the mere fortuitous or pre-arranged meeting of the raw material is not sufficient. Whence comes the power to make any change in any or all of them? It must be evident on a little reflection that considerable work must be expended on such bodies to produce more complex ones from them.

We find that the increase in weight of the plant which must follow the building up of complex bodies, or the construction of its own substance from these simple ones, can only take place under certain external conditions, and of these the most important is exposure to sunlight. Exposure to sunlight, again, is quite inoperative, unless the tissue so exposed contains the chloroplastids already described. Evidently some relation exists between these two factors.

The chlorophyll can be extracted from the plastid which contains it, by the simple process of soaking the leaf in alcohol. When such a solution is made it has the same bright green appearance as the leaf itself, and its relation to sunlight can be examined. If a beam of light be made to pass through a prism of glass, it does not, as is well known, emerge as a simple beam, but the different rays of which it is compared are all bent from the straight line. Being of different degrees of refrangibility—that is, being deflected in different extents—the rays emerge from the prism separately, and, instead of a spot of white light, a band of all the colours of the rainbow, arranged in definite sequence, falls on any surface placed in the path of the beam after emergence. The band is known as the solar spectrum. If now various substances be placed in the path of the light before it reaches the prism, it is found that this band of colours is often very much affected, not being continuous, but crossed by vertical black or dim bands, indicating that certain rays have been sifted out or absorbed, as the light has passed through the solution of the substance under experiment. Chlorophyll is one of these substances; if a solution of it be tested as described, the resulting spectrum is found to be marked by seven distinct vertical patches which are called its absorption bands. It will be seen that one very dense band occupies a large portion of

what should be the red part of the spectrum; three less well-defined ones blot out nearly all the blue end, and there are three narrower and fainter ones in the green and yellow regions. If the leaf itself be examined with an appropriate arrangement of prisms, the same absorption of light is found to take place.

Here we have the explanation for the necessity of chlorophyll and sunlight. The radiant energy of part of the light is absorbed by the chlorophyll and affords the motive power for the chemical changes that take place. Many careful experiments led to the conclusion that the most effective rays are those which correspond to the broad black band in the red. In other words the chemical changes are brought about by the energy derived from the sun, which is made to do work just as truly as the energy which is derived from the combustion of the fuel of a steam-engine.

But it must not be forgotten that the chlorophyll is associated with protoplasm in the chloroplastid. The function of the colouring matter alone is only the absorption of the light; it can by itself go no further. The absorption is the same whether the chlorophyll be in the plastid or in the alcoholic solution; the further effect is different in the two cases. The energy secured by the chlorophyll is rendered available by the protoplasmic element of the corpuscle, which carries out the definite chemical change.

To trace the chemical reactions in detail would be beyond the scope of this paper. They are very varied, and even now very imperfectly understood. The result of them is to be found in the appearance of complex materials in the cell, some of them in solution in the cell-sap, others imbedded in the chloroplastids, others included in the substance of the protoplasm of the cell. We may, however, take a cursory glance at the principal ones, whose manufacture can be traced with more or less difficulty, particularly as they readily fall into groups such as we shall see are presented by the bodies finally stored in the reservoirs described above.

FORESTRY ITEMS.

Mr. A. C. Forbes, writing on "Knots in Timber" to the *Timber Trades Journal*, says:—

Timber without knots is almost as rare as fish without bones, and yet for many purposes knots must be considered as defects which depreciate the value of wood to a greater or less extent. Where wood is exposed to friction, as in flooring, or to strains which try its transverse strength, as in rafters, laths, joists, &c., knots are generally detrimental to the utility and efficiency of the goods made from it, and an endeavour is always made to cut such from the lower part of the stem in which the knots are small and extend but a short distance from the centre. The most objectionable form which knots assume is when they consist of plugs of dead wood embedded in the green or fresh timber, having no greater connection with the latter than a nail or staple driven into the wood. Thin boarding or laths containing these dead knots are of low value, as the knots are apt to drop out when the surrounding wood begins to shrink, leaving cavities and weak places in the wood. Green knots also weaken the transverse strength of wood by interrupting the fibres and weakening the elasticity of the wood, but as they are nearly of the same hardness and texture as the surrounding tissues, and do not interfere with the cohesive strength, they are more readily tolerated than many other defects commonly found in timber.

Mr. Rudder, Forester, N.S.W., writing in the *Agricultural Gazette* of that Colony, quotes the following authorities as to the importance of forests generally in the economy of nature:—

Mr. F. B. Hough, Ph.D., in his Elements of Forestry, referring to the ruin that is brought about by the clearing of wood-lands, says:—"It is a familiar fact that there are many regions in Asia and Southern Europe, once exceedingly fertile and densely populated, that are now utterly sterile and desolate. The country bordering upon the Euphrates, and portions of Turkey, Greece, Egypt, Italy and Spain are now incapable of cultivation from this cause." The Hon. Geo. P. Marsh, in his work entitled "The Earth as Modified by Human Action," has devoted a large space to the discussion of the question. A more recent illustration of these effects is published in 1876 in the principal French Journal of Forestry:—"The Khonote Bucharia presents a striking example of the consequences brought upon a country by clearings. Within a period of thirty years this was one of the most fertile regions of Central Asia, a country which, when well wooded and watered, was a terrestrial paradise; but within the last twenty-five years a mania of clearing has seized upon the inhabitants, and all the great forests have been cut away, and the little that remained was ravaged by fire during the civil war. The consequence was not long in following, and has transformed this country into a kind of arid desert. The watercourses are dried up and the irrigating canals empty. The moving sands of the desert, being no longer restrained by barriers of forests, are every day gaining upon the land, and will finish by transforming it into a desert as desolate as the solitudes that separate it from Khiva."

The *Indian Forester* referring to the Ceylon Forest Administration Report for 1894 says:—We are glad to see that attention is being paid to the palmyrah forests in the north of the Island, and that an officer, Mr. Hansard, has been employed in roughly surveying the Crown lands in the Jaffna district which bear palmyrah or are fit for planting with it. He has reported that large quantities of palmyrah wood are being exported to India, and this seems to point to the importance of enquiries being also made in the neighbouring Indian districts such as Madras, Tanjore and Tinnevelly, with a view to making reserves there also. In some districts in Madras, *e.g.*, Nellore, palmyrah areas have, we believe, been reserved, and in others, *e.g.*, Cuddapah and Anantapur, palmyrah plantations have been made, we understand, but we have not heard of any in the Southern districts having yet been formed. Nothing is more easy in the way of plantation than to grow palmyrah; all that is necessary is to sow the large fruits which germinate well and then to keep off cattle. We note that Mr. Broun gives 80 years as the time necessary to produce timber-yielding palmyrahs.

The same paper says that "fire protection in Ceylon seems to be still in abeyance, but the teak plantations were successfully protected during the year." Damage and destruction by forest-fires are by no means so common in Ceylon, while, to quote the *Indian Agriculturist*, "the forest officer in India must sometimes be in despair at the havoc wrought among the trees in his charge by the fires kindled wilfully by the people."

The Inspector-General of Forests in India in his annual report for 1893-94 states that in Bengal the total area burnt was 37 per cent. of the area protected, that is 689 square miles burnt and 1,889 protected. In Singbhoom, we are told, matters were worse, 629 out of 869 miles being burnt over, though 72 special watchers were employed. These two instances will give some idea of the enormous destruction by fire to forests in India.

The sixth annual prize-giving at the Imperial Forest School, Dehra Doon, took place on May 1st. Of 37 candidates in the upper, and 8 in the lower classes, 29 upper and 5 lower class students have been granted certificates, leaving 8 failures in the upper and 3 in the lower class. There were no honour—men among the students who passed out. We note that the prize given by Mr. Bagshawe, Conservator of Forests, Berar, for the best Engineering Note-book went to J. W. Modder, a student from Ceylon.

Mr. Hill, the Inspector-General of Forests, addressing the students at this prize-giving ceremony, said: To those students who have passed I would say that you have failed to learn more than a part of what the school can teach you, and that this is only a drop in the ocean of what you have yet to learn before you can prove yourself to be a credit to the school and worthy members of the Government service. Strive therefore to turn the knowledge you have acquired to good account, and by careful observation and appreciation of facts and phenomena that may come in your way, endeavour to make yourselves thoroughly efficient officers of the state and of the Forest service. You may have discouragements and disappointments, but you may rest assured that if you know your business, and work with energy and strict observance of those principles which we have tried to impress upon you at the school, you must succeed.

There has been a good deal of discussion of late as to the merits and demerits of the *Lantana*. The conclusion of the whole matter seems to be the opinion that the lantana while a pestiferous weed in cultivated areas and particularly in Forests, is a wonderful renovater of fallow land.

THE CAUSE OF RINDERPEST.

At a general meeting of the members of the Microscopical Society of Calcutta, held on the 9th ultimo in the Asiatic Society's rooms, Dr. W. J. Simpson, Health Officer, made some important remarks about his discovery—the diplo-bacterium, which causes rinderpest—a discovery, it may be added, the economic value of which is undoubted, especially in India. We are enabled to give a verbatim report of his remarks as follows:—

"I shall now exhibit to the members of the Society the micro-organism of a disease which is peculiarly interesting to India, as it produces a malady which is fatal to the cattle of this country, and inflicts enormous financial loss on the agricultural population. I refer to rinderpest. This disease is of such importance that an Imperial Bacteriological Laboratory has been established at Almora with the special object of investigating its cause. Hitherto the researches have not been attended with success.

"Rinderpest and other diseases of cattle have always attracted much of my attention, not so much on account of the diseases of cattle themselves, as on account of the relationship these affections bear to human diseases. I am convinced that, in the disappearance and re-appearance of disease among men, animals play an important part, and that it is necessary, for the investigation of the causes of disease, to keep in view man's relationship with his environment both in the animal and vegetable world. It has always been due to this relation that the diseases of animals and plants have interested me, and I have endeavoured to interest others in the same pursuit. It was in carrying out this policy that in September, 1894, while Monsieur Haffkine and I were examining diseased cows for comma bacilli and microbes generally, we isolated a small diplo-bacterium from a diseased buffalo. Some experiments, which were instituted at the time, failed to produce any noticeable effect on animals, so that the micro-organism was laid aside as one of those numerous harmless microbes that are so often to be found in animal tissues. I had, however, come across a similar bacteria in a human disease, which I have always been much interested in, and on account of this, I was not disposed to abandon the microbe altogether, and so after keeping this microbe in the laboratory for two or three months, I determined to further experiment with it, but in a different way from that which had resulted in failure. In December, 1894, I discovered that the microbe possessed distinctly pathogenic properties, which proved to be of a peculiar nature, and in a short time I found I was dealing with a microbe which produces rinderpest, the most fatal and most destructive disease amongst cattle in India and the East. It is thought to have originally come from China. The disease can be produced experimentally by the microbe in question, and on searching for cattle suffering from rinderpest, the same microbe has been isolated from them, which in turn reproduces the disease in animals.

"The microbe is a diplo-bacterium, varying from 0·3 to 0·6 m.m. in length, and about one-third of this in breadth. It has a clear space in the centre, and in old specimens this division is still more pronounced. Occasionally two diplo-bacteria are fixed, end to end, and give the impression of a longer bacillus. The microbe is not unlike the bacillus found by Dr. Kline in ordinary calf vaccine. It is easily stained by the ordinary dyes, fuchsin and gentain violet. It grows with air and without air, but gradually becomes attenuated in virulence by repeated growth in air, so much so that at the early part of 1895, two tubes rubbed into sores on the skin of an animal, would kill the animal, whereas 12 tubes now will only produce a slight illnss. It is a motile bacillus, is sporeless, multiplies rapidly in bouillon with the formation of air bubbles, and forms air bubbles in stale cultures of galatine. It is destroyed at a temperature of 57°, even when only exposed for a quarter-of-an-hour. It is not unlike the *bacillus coli*, but

differs from this in its action on milk and in its pathogenic properties on large animals. On agar it grows as a luxuriant greyish white growth. It does not turn yellow, but retains its greyish colour constantly.

"Rinderpest is a disease that only affects an animal once. If the animal recovers from the attack, it will pass through later epidemics with perfect immunity. From this fact which is well-known in those parts of the country where rinderpest is particularly fatal, a protected animal possesses a special value, and is worth much more than an unprotected one. Besides being a very fatal disease, it is extremely infectious, every secretion and excretion from the animal's body being infective; one animal placed among a herd will be the means of conveying the disease to nearly the whole herd, for there seem to be very few animals which possess a natural resistance against the disease. The loss to the farmer and peasant is enormus. I have seen in Calcutta a *gowalla* lose his whole stock in less than a fortnight. It is no uncommon thing to come across a *gowalla* who has lost half of his stock from this disease, in fact, if a *gowalla* gets rinderpest, or *gotee* as he calls it among his cows, he is fortunate if it destroys only one-third or half of his stock. At those times when rinderpest is very prevalent in the country, the loss in cattle is so great that in many places it has a serious effect on the crops owing to the farmers having an insufficient number of cattle to work in their fields. It will be seen from these remarks that the study of rinderpest is a very important matter in the sanitary problems of this country. In 1871, when the Indian Cattle Plague Commission investigated this disease, and came to the conclusion that it was the same disease as that which had caused so much destruction on cattle in England in 1866, the question of protecting animals by inoculating them with the crude virus, *i.e.*, with the fluids taken from a sick animal, was discussed, so also was the amount of protection produced by ordinary vaccination with vaccine lymph; both of these processes had been tried extensively in Russia and Austria, but not with very satisfactory results.

"In inoculating with the crude virus, it was found that, though in many cases a mild disease was caused, very frequently a virulent type was produced, and that there was no real control over the disease. In the case of vaccinating with ordinary vaccine lymph, because of the view that rinderpest is allied to small-pox in man, the evidence as to protective effect was too conflicting to justify any practical action. With the microbe, however, now in our hands, I consider it to be merely a matter of time to prepare a vaccine which shall not only be protective, but which shall give us control over the disease. I have carried on a number of experiments in this direction, but they are not sufficiently advanced to make any observations upon them at the present time. In a number of these I have been fortunate in securing the able assistance of Veterinary Captain Gunn, the Veterinary Inspector for Bengal, who has from the first been most anxious to push forward the experiments. We propose to take advantage of the first large epidemic of rinderpest, which chiefly occurs in Northern India, to carry these experiments to a further stage, and with the microbe in our hands there is a prospect that not only will a vaccine for preventive purposes be prepared, but also an antitoxin for the treatment of those cattle that have become affected."

INSTRUCTIONS FOR DISINFECTION.

The following "instructions" (which we take over from the *N.S.W. Agricultural Gazette*) are those issued by the German Government for the disinfection of places where animals have been kept suffering from infectious diseases, and should prove very valuable to all stockowners:—(*Extract from "The Veterinarian," October, 1895.*)

I.—CLEANSING AND DISINFECTING MATERIALS.

1. *Water and Steam.*—Hot water should be used in preference to cold water where it is available, and as near the boiling temperature as possible. One hour's heating of substances in boiling water is sufficient to disinfect them.

2. *Soapsuds.*—This may be made of either yellow or black soap, 1 lb. in 100 lb. hot water.

3. *Soda Lye.*—Dissolve 1 lb. of washing soda in 10 gallons water.

4. *Lime.*—Freshly-slaked lime-shell, either in the form of powder or mixed with twice its own bulk of water and used as a thin paste, viz., milk of lime.

5. *Chloride of Lime.*—Fresh strongly-smelling chloride of lime may be applied in two ways, viz., as a thick paste, *i.e.*, one part of chloride of lime to three parts of water; or as a thin paste one part chloride of lime to twenty parts of water.

6. *Carbolic Acid Solution.*—Mix together one part of liquified carbolic acid with twenty parts of water, viz., a 5 per cent. solution.

7. *Cressol Water.*—Made from cressol soap and nine parts of water.

8. *Coal Tar or Wood Tar.*

9. *Fire.*—The singeing of substances that can endure fire over their whole surface is a thorough means of destroying infection.

II.—CLEANSING AND DISINFECTING METHODS.

Before cleansing, all straw, fodder, litter, and dung should be removed. Thorough cleansing must always precede methods of disinfection. The cleansing of a stall or stable must extend to everything therein, and to the soil and subsoil. All old wooden boards, linings, and the like should be taken down and burned. The cleansing should begin at the roof, then go to the walls and partitions, and lastly to the floor. Hot water or hot lye is better than cold. The cleansing of a part of a stable or the like should extend to 4 feet beyond the infected part in all directions. The water used for cleansing should not be allowed to come in contact with anything that can be a carrier of infection until it has been disinfected, and it must not go into a stream Anything of little worth should be burned.

1. Wood, stone, and iron fixtures, if not oil-painted, should be scoured and then washed. Woodwork with a rough surface should be planed smooth, and any ragged wood or porous or rotten wood should be removed and burned.

2. Plastered walls should be scraped down, so that the whole surface is renewed, and any loose parts or ornamental parts should be taken away.

3. Oil-painted surfaces are to be washed with hot, soapy water.

4. Stone, cement, or asphalt floors are to be scoured and washed.

5. Rough flooring of stone, earth, &c., should be dug up until the limit of the inspection is reached, and after disinfection the stones and earth may be replaced.

III.—CLEANING OF UTENSILS.

1. Wooden implements and utensils, including carts, barrows, troughs, sieves, besoms, also boots and shoes are to be thoroughly scoured and washed.

2. Iron and metal utensils, such as chains, rings, curbs, pails, &c., if they cannot have fire applied to them, should be thoroughly scrubbed clean and rinsed with hot water.

3. Leather materials, such as saddles, bridles, harness, boots, &c., should be cleansed with hot lye and then with water.

4. Clothes, ropes, halters, and all cloth materials should be washed with hot water, soap, and soda.

5. Clothes that cannot be so washed, also bedding, &c., should be aired for some days and several times beaten and brushed.

6. Hair-stuffed or wove-constructed goods must be similarly aired, beaten, and brushed.

IV.—DISINFECTION.

In ordinary circumstances the cleansing, if thoroughly done, will be of itself sufficient, providing that the infecting material has been reached. All walls, partitions, floors, &c. should, after cleansing, be whitewashed with milk of lime; iron parts should be tarred, lacquered, or painted.

If from the nature of the case the infection has not entirely been reached by the cleansing processes, the following regulations must be attended to:—

1. All straw, fodder, litter, dung, and sweepings from an infected stall or stable must be burned.

2. Fodder supplies, stores of straw or hay that may have been reached by the infection, but which are not themselves the carriers of it, should be well aired for some days and frequently turned for that purpose.

3. Walls and fixtures, floors, gutters, &c., should be washed with thick lime paste or with chloride of lime paste. Iron materials should be disinfected with carbolic and solution or cressol water; so also stone or earthenware fixtures.

4. The soil or stone floor of a stable, &c., should be treated with milk of lime before any fresh litter is brought in.

5. Wooden and iron fixtures or apparatus that have been in contact with infection should, if possible, have a plane passed over them, or be washed with 5 per cent carbolic solution, or be painted or tarred, or the like. Leather stuff should be washed with 5 per cent. carbolic solution.

6. Linen, cotton, hempen, or woollen goods should be put into a steam disinfector, and subjected to steam at the boiling point of water for at least one and a half hour. Should that not be attainable, they may be washed and steeped in boiling water, and if that cannot be done, they should be removed and burned.

7. The disinfection of the hands and instruments is obtained by treatment with 5 per cent. carbolic acid solution.

THE DISINFECTION OF FÆCAL MATTER.

(Annales de l'Institut Pasteur, May, 1895.)

Von Vincent has made some experiments to test the relative efficacy of the more common disinfectants, viz.:—

1. Green vitriol, blue vitriol, zinc chloride.
2. Corrosive sublimate (mercuric chloride.)
3. Chloride of lime, alkaline hypochlorites.
4. Lime, potash, and soda.
5. Carbolic acid, creolin, lysol, solveal, and solutal.

The following is a summary of his conclusions:—

1. A complete disinfection of fæcal matter is unnecessary, except where pathogenic germs are known to be present.

2. As regards chemial disinfectants, one must distinguish true bactericides from deodorising agents, and have regard to their relative cost.

3. In these respects the best antiseptics for the purpose of disinfecting fæcalia are blue vitriol, creolin, lysol, and then chloride of lime. Corrosive sublimate is useless, and so is zinc chloride.

4. When 1 per cent. of sulphuric acid is added to blue vitriol, its antiseptic power is increased, and when 1 per cent. hydrochloric acid is added to chloride of lime, it is much more efficacious, and these latter are the cheapest and best disinfectants of dung and litter.

Correspondence.

To the Editor, "Agricultural Magazine."

COCONUTS.

Dombowinne Estate.

Mirigama, 30th April, 1896.

SIR,—King Coffee has left a worthy successor in Queen Coconut. With the example before them of the fate of the former, courtiers will do well to act carefully in their relations with the latter. The former it must be admitted well rewarded his servants, so long as he flourished; and he died indeed a sovereign's death; for, his dependants willingly sacrificed their all in trying to save him. But his malady was beyond human skill.

Queen coconut is still, indeed, in the cradle, and there is no knowing what sort of a sovereign she may turn out to be. Though she is liable to no disease, yet she is surrounded by innumerable enemies. The chief of them is our "Ignorance of her ways and habits." Here are some useful facts for the benefit of the uninitiated:—

A well-dried ripe nut in husk varies in weight from ..	1	to	$1\frac{1}{2}$	lb.
Without husk	$\frac{1}{2}$	to	$3\frac{1}{4}$	,,
Its fluid weighs	0	to	$1\frac{1}{4}$	,,
Shell and brown coating of the kernel	$\frac{1}{4}$	to	$\frac{3}{4}$	,,
Kernel without the brown coating	$\frac{1}{4}$	to	$1\frac{3}{4}$	,,
Thickness of the kernel in inch	$\frac{1}{4}$	to	$\frac{3}{4}$	inch.
Latitudinal measure of a nut in inches	9	to	19	,,
Longitudinally	9	to	20	,,

In a husked nut weighing 40 oz., the white kernel weighs 20 oz. (For every oz. of the nut above 40 oz., the white kernel weighs $\frac{1}{4}$ oz. above 20. For every oz of the nut under 40 oz., the white kernel weighs $\frac{1}{4}$ oz. below 20 oz.) The

weight of the kernels of a given quantity of husked nuts is generally half their own unbroken weight.

An entire coconut divides itself into three nearly equal parts. I. Husk. II. The white kernel. III. The brown coating of the white kernel, the shell and the fluid.

The number of nuts which go to make a candy (560 lb.) of copperah varies from 800 to 2,000.

In a given quantity of good old copperah, the oil is ⅔, and the punak ⅓. In bad copperah, they are half and half.

In Europe coconut oil is priced according to the proportion of stearine and oleine of which it consists. It is due to the excess of these "fats" that Cochin oil fetches higher prices than Ceylon oil.

A pada boat carries 45 candies of copperah at 4 cents per candy per mile. (From Negombo to Colombo, only 2 cents per candy per mile.)

A cart carries 5 candies at 6 cents per candy per mile on good roads. On roadless sand it carries only two candies. And the toll, if there is one, has to be paid by the owner of the copperah in addition to the 6 cents.

A pada boat carries 18,000 husked nuts at 10 cents per 1,000 per mile.

A cart carries 1,500 husked nuts at 18 cents per 1,000 per mile on good roads.

To husk, to break and to dry a 1,000 nuts cost R1·25.

To husk only, R0·62½.

The drought and the lightning cause much loss to estates in some places, and do not in others.

The annual yield of a coconut tree varies from 0 to 900 nuts.*

The age at which the coconut begins to bear varies from 3 to 30 years. And the period it lives varies from 50 to 150 years.

Some trees may be picked 50 times a year, and some only once in 2 or 3 years.*

Picking costs from ½ cent to 1 cent per pick per tree according to its height and the thickness of its stems and the number of its bunches.

Those who have observed these vagaries of the coconut and have discovered their causes, have often discovered them too late to derive much practical benefit to themselves.

Yours truly.
COCOPALMIST.

GENERAL ITEMS

In the Madras Presidency, 61·8 per cent of the people outside of the Presidency town are agriculturists, and the population was returned at the last Census as 34,336,196.

The *Agricultural Gazette* of New South Wales publishes the following remedies for locusts attacking fruit trees:—Spraying with Paris Green,—1 lb. to 160 gallons of water, will destroy large numbers. Poisoned baits, made as follows, are also very effective:—Take 50 lb. of bran, or a mixture of bran and pollard, mix with it thoroughly 1 lb., or even more of Paris green, London purple, or white arsenic. When thoroughly mixed add sweetened water (1 lb. of treace to 1 gallon of water) to make the whole into a paste, which must be moist, but not so damp that it will drop off a spoon. Of this poisoned bait place lumps about the size of a walnut round each vine or tree, and also place a number of lumps on the side of the vineyard or orchard from which the locusts are coming. These remedies will kill very large numbers, but they are no use against a plague. The only remedy then is to keep the insects moving by driving them. Everyone in a district should unite to fight them.

It seems (says the *Live Stock Journal*) as if the old system of healing sprains of the horse's limbs is doomed. Fomentations, hot or cold, and the cruel operation of firing are giving way to successful treatment by dry bandaging and massage. At a recent meeting of the Royal Counties Veterinary Medical Association, Mr. William Hunting, President of the Royal College of Veterinary Surgeons, said when sprains occurred he had the leg wrapped in dry cotton-wool and bound in a linen bandage with as much pressure as could reasonably be put on. Orders were left that at night an ordinary flannel bandage should be substituted for the linen one. This he recommended as flannel was more elastic than linen, and that sometimes a bandage might be put on too tight, and the man in charge might notice its injurious effects in daytime, but would not watch it at night. He also recommended gentle walking exercise daily, the horse being led and not ridden, and commencing with half-an-hour daily. The massage should be performed when changing bandages, by hand-rubbing in the direction of the hair. The more the swelling, the less rapid the repair of tissues. He believed they could prevent the increase of swelling in an early sprain by firm pressure, provided that pressure was equalized and thoroughly distributed by the use of cotton-wool under the bandage. The advantage of dry cotton-wool an inch and a half thick was that it absolutely equalized the pressure throughout the whole bandage.

Mr. Hutcheon, Colonial Veterinary Surgeon o the Cape, referring to the retention of the fœtal membranes in cows, says:—There are a number of medicines which are extolled as effective in expelling the fœtal membranes or after-birth, but I have not much faith in any of them. The only satisfactory method is to introduce the hand into the uterus, and extract the membranes from their attachments. Oil the right hand and arm well, then introduce it into the uterus; lay hold of the protruding portion of the membranes with the left hand, and as you gradually draw up the membranes from their attachments in the uterus by the right hand, you pull up the slack with the left hand. The membranes are generally easily removed in this manner by the third day. Another plan is to inject a two per cent. solution of carbolic acid or Jeyes' fluid, or permanganate of potash into the uterus, this not only assists in neutralising the septic action going on, but the effort which the cow makes to expel this fluid, assists in expelling the fœtal membranes as well. Decoctions of ergot of rye and savin are largely used, and laurel berries are highly recommended. The colonial remedy is soot and vinegar. I would recommend powdered ergot of rye and savin, of each half an ounce, infused in a quart of water, with a laxative such as half a pound of Glauber salts added. The usual cleansing drinks generally contain Epsom salts mixed with condiments, such as ginger, gentian fenugreek, and anise seeds.

* Astounding! These statements upset all hitherto accepted estimates. What have our well-known authorities on Coconuts to say to them?—ED. *A. M.*

COFFEE AND PEPPER EXPORTS FROM SOUTHERN INDIA: 1894-5.

Tellicherry, Sept. 20, 1895.

Dear Sir,—Hitherto I have confined my Annual Statement of Exports of Coffee and Pepper to what has been shipped from the Malabar Coast alone; but this year, acting on a suggestion made to me by the *Madras Mail*, I have included the shipments from Madras and Tuticorin; the only other Ports in Southern India from which Coffee is exported in any quantity, so that the statement I now have the pleasure to hand you includes the total export of Coffee and Pepper from Southern India for the year ending 30th June 1895, or in other words from India, seeing that the cultivation of these products is confined to the Southern Presidency and the neighbouring States of Mysore and Travancore.

Coffee.—You will gather from my figures that the total export of Coffee amounts to cwts. 2,91,621 which amount may be considered to approximately represent last year's crop; for although there was a certain quantity unshipped on 30th June last, my figures include an equivalent stock of the previous year's crop shipped during the year under review. Of the total quantity shipped cwts. 1,93,639 may be regarded as Plantation, and cwts. 97,982 as Native Coffee, which taking the average value of the former at R80 per cwt. and of the latter at R74 per cwt., represents respectively R1,54,91,120 and R72,50,668 or a total of R2,27,41,788 as the value of the Coffee Crop exported from India this past year.

Exports from Mangalore, Tellicherry and Madras may be taken as representing the crops from Mysore and Coorg, while those from Wynaad, the Neilgherries, the Neliampathies and the Shevaroys find their outlet at Calicut and Beypore. Shipments from Tuticorin and Travancore ports are the produce of estates on the Pulneys and Travancore Hills. My statement speaks for itself as to the distribution of the shipments to Foreign ports.

Pepper.—The total export of this spice amounts to cwts. 1,51,439, which I value at R25,74.463 taking the average price at R17 per cwt. The quantity probably does not represent the total crop, which would be considerably increased if the value of pepper was higher, the diminution in which has greatly affected the export.—I am, dear sir, yours faithfully,

RALPH TATHAM, Agent to Arbuthnot & Co.

MESSRS. ARBUTHNOT & COMPANY'S ANNUAL STATEMENT OF EXPORTS OF COFFEE AND PEPPER FROM SOUTHERN INDIA DURING THE SEASON ENDING 30TH JUNE 1895.

Cultivation.—Much has been done this year to improve the general upkeep and culture of the various classes of plants in Péradeniya. Bad soil and want of manure are our great drawbacks. Most of the smaller ornamental plants in the central borders have been arranged to more advantage, much pruning and cleaning of the larger ones done, and many fresh specimens put out. Roses do not as a rule succeed here ; those hitherto cramped in beds near the store have been removed and planted out at equal distances in well-prepared sites near the conservatory, and it is hoped they may do better under these conditions.

The Herbaceous Ground has been well looked after, the young Gardener in charge having taken a real interest in it. I find it improved in tidiness and appearance. Many plants of much interest are planted here, and nearly all are labelled.

The Nurseries have been laid out afresh ; the beds now number 93, are made straight and uniform, and are well supplied with a fresh stock of plants for distribution. Much improvement has also been made in the number and quality of the stock of plants in bamboo pots, and large numbers of fruit trees, palms, and foliage plants have been propagated for distribution.

Much labour is annually expended upon the extensive tract of these grounds known as the Old Arboretum, in weeding, cleaning, pruning, and planting, but we are unable to make much impression on its wild character. A much larger labour force is needed to treat this portion of the Gardens in the way it should be treated.

During the year the following species were noticed in flower for the first time :—*Paulowilhelmia speciosa*, *Nematanthus longipes*, *Steriphoma paradoxum*, *Stenandrium Lindeni*, *Ixora grandiflora*, *Sclerocarya caffra*, *Couroupita antillana* (Cannon-ball tree), *Rhodamnia trinervis*, *Exostemma caribbœum*, *Cassia nodosa*, *Adenanthera microsperma*, *Aristolochia gigas*, var. *Sturtevantii*, *A.* sp., *Epidendrum falcatum*, *Cœlogyne macrophylla*, Hort. Bogor., *Angrœcum Ellisii ? Stemona tuberosa*, *Aloe* sp., *Limnocharis Humboldtii*, *Cyrtostachys Rendah*.

Our *Lodoicea* palm (" Coco-de-mer "), now forty-six years old, which has been looking somewhat unhealthy for some years, was taken in hand in June. A trench, 2 ft. wide and 3 ft. deep, was dug all round it at a distance of 6 ft., and all the numerous roots from large trees near by were removed. The old soil was then carefully taken out, and new soil, mixed with leaf-mould and manure, added in its stead.

Several old trees having become dangerously decayed were removed, including a large one of *Elæocarpus amœnus* near the Museum. A very large rotten old tree of *Terminalia Belerica* in the centre of the fernery fell of itself.

A fine set of twenty-one new garden varieties of *Canna* were received from the Agri-Horticultural Society of Calcutta, and have flowered well, and been greatly admired.

It may also be mentioned that more seeds of *Victoria regia* were received from Madras in July, and three seedling plants raised from them were put out in the tank in the Gordon Gardens, Colombo, where they have duly flowered.

Weather.—Another dry year on the whole, but the months June, October, and December were very much wetter than usual, especially December, when double the average (of the last eleven years) fell. February and March, however, were very dry, and at the end of the latter month the Garden pond was lower than I have ever before seen it. The total rainfall for the year, 77·56 in., was 9·72 in. below the average of the past ten years, but the number of days on which it fell, 170, is 16 above the average for the same period.

The monthly rainfall is shown in the following table :—

1895.	Rainfall. Inches.	Rainy Days.	1895.	Rainfall. Inches.	Rainy Days.
January ...	3·18 ...	7	July ...	4·51 ...	19
February ...	1·08 ...	3	August ...	5·86 ...	26
March ...	3·74 ...	6	September ...	4·59 ...	22
April ...	5·33 ...	14	October ...	17·87 ...	27
May ..	2·96 ...	7	November ...	1·78 ...	8
June ...	12·28 ...	16	December ...	14·38 ...	15

Total, 77·56 in. on 170 days.

The greatest fall during any twenty-four hours was 6·58 from December 27 to 28. This being more than fell during the whole of February, May, and November. The remarkable feature of this table is the very small fall in November.

The heavy rains after long drought at the end of March caused a great building of termites' nests all over the Garden. No less than 371 large nests were dug out in two weeks.

Visitors.—The book kept at the lodge for the purpose was signed by as many as 2,283 foreign visitors (that is, not Ceylon residents). This is an increase over that of last year of 310, or 257 more than that given for 1893, which was the highest yet recorded.

3.—Hakgala Garden.

I have a very full report on this Garden from Mr. Nock, the energetic Superintendent, who is continually and in every way improving its usefulness and beauty, so far as our means will allow. Under his skilful attention it has now become nearly what I had hoped to make it when I commenced remodelling it in 1881.

An important improvement has been the provision of new and proper accommodation for the coolies. The rotten old lines were, as mentioned in my last report, accidentally burnt down, and a special vote of Rs. 1,500 was granted the Department for the erection of new ones. With this sum we have been able to put up a permanent building 121 ft. 6 in. long by 12 ft. broad, containing fifteen rooms, each 12 ft. by 8 ft., the walls being 7 ft. high. The foundation and pillars are of stone, the weather side and the two ends are weather-boarded, cased inside with lath and mud plaster. The front wall and the partitions are of lath and mud plaster. The rooms are raised one foot above the ground, and there is a four-foot verandah the whole length of the front. The roof is covered with corrugated iron. The wood for the roof-timber, weather-boarding, doors, window-shutters, &c., was all sawn from the Garden property, and the lime was burnt on the premises. Each room has a door and window-shutter. The weather-boarding, wall-plates, verandah-posts, doors, window-shutters, and all exposed woodwork have received two coats of tar, and the pillars and plastered walls have been whitewashed. A long-felt want is thus now supplied.

I regret that Government was unable to sanction a vote for roofing also the Foreman's quarters with corrugated iron, and trust this may soon be provided ; it is much needed, as rotten thatch soon affects the roof-timbers in the wet climate of Hakgala.

The potting-shed—an important place in a garden such as Hakgala—collapsed from decay at the end of the year. It is much to be regretted that our finances will not allow of the erection of permanent buildings—temporary structures are in the long run a loss in many ways.

Much labour has been expended on the Carriage Drive and paths, the heavy and sudden falls of rain at several periods of the year having done much damage.

Mr. Nock in the following report notes the great increase in nursery work for the sale of plants to the public at Hakgala, and I fully endorse his remarks as to the absolute injury and loss which result to the Department from this sort of work. I have frequently expressed my opinion that this business should be mainly left to private enterprise, and that the Botanic Gardens should not be expected to raise for sale quantities of garden plants, but be allowed a free choice as to making exchanges or giving specimens to suitable persons.

From the very full report of the Superintendent I make the following extracts :—

Roads and Paths.—The large drive from the fernery to below the Herbaceous Garden, for a distance of 162 yards, was remetalled towards the end of the year, but the unprecedented heavy rain on the 27th and 28th of December caused such damage that this will again have to be re-made, and the other parts of the drives were so much cut up that the greater portion will require to be re-made during 1896. The paths all over the garden were repaired where necessary and kept in good order. The new garden roller has been of much service for this work, and I have no hesitation in stating that it has already fully paid for its cost in saving of labour. Several new paths, 4 ft. wide, were made during the year, the total length measuring 391 yards. One of them starts from near the cattle-shed at the back of the bungalow, and leads round the back of the tennis court. This enables us to do away with the steep short road formerly used by the cattle. The other new path, which is 290 yards long, branches off from the one above the fernery and leads through the new camphor plantation, connecting with the old water-course path near the *Pinus* plantation. The trace is of an easy gradient, and this path will, when the surroundings are put in order, make a very pleasant addition to the walks of the garden.

Fernery.—A few thousand plants, mostly begonias and native ferns, have been set out in vacant places, and about 100 orchids have been fixed on to the tree stems. The tree-ferns and the banks of *Adiantums* have grown well, and are in a very thriving state. A stone side drain 111 ft. long was laid down on the upper side of the path leading up to the *Adiantum* banks from the *Camellia* bed.

The bed of *Primula obconica*, which has been flowering so long and so well, was dug up, re-made, and re-planted. A bed in the lower part of this garden was planted with plants of the beautiful and interesting native fern *Aspidium aculeatum* var. *anomalum*, with begonias and other ferns planted between them. It has been stated, and is believed by some still, that after a time under cultivation this plant will produce the spores on the under surface of the fronds as in other ferns. This is not correct as far as my experience goes, and we can show plants here that have been cultivated for over ten years that still keep true and produce healthy spores on the upper surface only.

Nurseries.—The old nursery has mostly been given up owing to the pest *Oxalis*, which has got such a hold that it is impossible to eradicate it without allowing the beds to lie fallow for some time. New beds were made below the site of the old cooly lines, and we hope to be able to fence and lay out this plot during 1896 and make a good nursery of it.

Ten beds of Turkey oak (*Quercus Cerris*) were sown in the nursery at the beginning of November, and at the end of the year they were germinating freely.

Seven hundred and twenty-eight packets of seeds were sown in seed pans and boxes, and some were sown in beds in the nursery ; 59,889 seedlings pricked out or transplanted ; 90,162 cuttings of various garden plants and shrubs were put in nursery and propagating house ; and 3,949 plants were potted.

Six thousand three hundred and ninety-eight wooden labels were made, and most of them used in the work of propagation, the painting and writing of these taking up a considerable amount of time. 117 plant boxes and a few plant tubs were also made for propagating purposes.

One hundred and seventy-two grafts of good varieties of plums were grafted on to stocks of the common cooking plum, and 29 apples were also grafted. Most of these have taken well. Some of the grafts put on last year have grown stout healthy shoots, 4 to 5 ft. long. More of this work would be done, but there is a great difficulty of obtaining stocks for the purpose.

The number of applicants this year was far above that of previous years, and the sum realized by the sale of plants was nearly double that of last year, and more than double that of 1893. This of course tells considerably against the upkeep of the garden, because much more labour has to be expended in propagation and nursery work. As all revenue is passed on direct to the Treasury, the more we realize the less the garden benefits.

Borders and Shrubberies.—74,063 plants and seedlings of various ornamental trees and shrubs and general garden plants and annuals were planted out during the year in the supply and upkeep of the gardens. In addition to these about 20,000 roots of a species of grass, which grows well under shade, were planted out under the trees above the propagating house.

Many plants died during the drought of February and March, and also from the effects of the rough weather in June, July, and December. A good deal of pruning was done in August, when the effects of the rough weather in June and July were more plainly seen. No less than 324 large trees and shrubs were destroyed during the high winds of the middle of June.

Labels.—837 large wooden labels, 18 in. long, 2½ in. broad, and ⅞ inch thick, were made by the garden carpenter, and after receiving three coats of white paint, the names, authorities, and countries of plants were printed on them in black paint. Through the kindness of Captain F. Bayley we obtained a quantity of coal dust free. This was boiled up with linseed oil to the consistency of paint, and while boiling the lower 9 in. of the sharpened ends of the labels were dipped in it, and it was allowed to soak in. When thoroughly dry they were set out. The oil and coal dust preserves the wood from decay for many years. We have some, now fairly good, that have been in the ground for over seven years.

Eight hundred and two plants of *Eucalyptus* and other trees were planted out on the patana, above the young men's quarters, for shelter. I find, however, that unless the patana is cleaned and kept clear and free from weeds that few plants do well; and as we have not the labour for this, I am not very hopeful of much success.

During May the lower ornamental pond* was cleaned up and plants of the variegated New Zealand flax were planted at irregular distances along the margin.

Some improvements were also effected to the upper piece of ornamental water. Small clumps of *Lilium giganteum* and *Richardia æthiopica* have been planted round the edges of the banks, underneath the water. These two plants are found to thrive in such a position.

A few plants of both the yellow and white English water lilies arrived at the end of the year (from Messrs. Richard Smith & Co., of Worcester) in much better condition than was expected. They have been carefully attended to and introduced to the pond, and are making a good start. They will be a most useful addition to the very few aquatic plants of the hill country. A plot of *Bowkeria triphylla*, raised from seeds received from Madras in July, 1890, has flowered for the first time. It is a very beautiful and interesting flower. In May and June the *Hydrangeas* made a fine show, producing hundreds of large beautifully-formed and well-coloured flowers. *Chrysanthemums* and tuberous-rooted begonias also gave a good display of flowers during these months. In July and August there was an unusually fine show of roses, the blooms were of good colour and size, and produced in large quantities. *Camellias* also flowered well in November. Of the orchids, the most noticeable one that flowered during the year was *Dendrobium Calceolus*. It flowered in June, bearing three spikes containing 45 blooms of fine form and colour.

Oxalis violacea.—The spread of this weed has become quite serious, and every effort has been made this year to get it under. No less than 159 bushels of the small bulbs (from the size of No. 5 shot to that of a 2-oz. lead ball) have been picked out of the soil in the old nursery and several other parts of the garden. As they are so hard to kill, all that have been collected this year have been boiled to destroy them. Women and children have been employed, and although the work has been done as cheaply as possible it has cost about Rs. 100, which is a great drawback on the garden vote ; it will take years to get rid of this pest.

Manure.—Our cattle have given us a good supply this year, and we have also had a valuable gift of about fourteen cart-loads from Mr. A. W. Jackson, of Sita Eliya.

Classified Herbaceous Ground.—This garden has suffered much from alternate droughts and heavy rains, partly through being on sloping ground, and also partly from being too crowded. The results during these last two years have been rather disappointing, and it has been decided, as soon as labour can be spared for it, to re-arrange the whole ground, making a sloping bank and terrace.

Wild Animals—Monkeys.—A group of monkeys, six or seven (the large *wanderoo*), which have frequented the gardens for some time without doing much damage, suddenly (in May) became destructive to the large Flame tree (*Sterculia acerifolia*) by breaking off the young succulent shoots. I tried shooting at them with small shot to drive them away, but they would persist in coming to this tree, so that I shot one with a bullet. They then remained away for a few days, but began their destructive work again, keeping out of my way, and I was unable to get another shot. They nearly ruined the tree, which was a fine one, and the largest we had in the gardens.

Sambur Deer were also very troublesome during May and June ; in fact, the damage done was serious, as they ate or broke down nearly all the plants in the back of the shrubbery for a distance of about 200 yards, showing a special liking for *Fuchsia*, *Habrothamnus*, *Balsams*, *Begonia*, *Iresine*, *Polygonum*, *Tecoma*, *Anthericum* and other liliaceous plants, and we were very thankful when Messrs. Jackson and Mr. A. J. Kellow sent in their packs of hounds and hunted them out.

Elephants.—Five elephants were in close proximity to the gardens for several months of the year, and during August and September they paid several visits to the upper part and broke down and destroyed a few lengths of the water-piping. It is very interesting, especially to visitors, to know that wild elephants are so close, and, unless they do any serious damage, I think it would be a great pity to have them shot.

Visitors.—The number of visitors during the year was 1,528, being an increase of 17 over that of 1894, and about 1,000 more than it was ten years ago. The greatest number in any month was 295 in April, and the lowest in any month was 27 in September. I regret to report that on several occasions during the year orchids, which have taken years to establish, have been torn from the trees in the fernery and taken away. Suspected parties will have to be closely watched in future.

Weather.—The weather during the year as regards rainfall was 5 in. over the average of twelve years, but the number of days on which rain fell was exactly the average, viz., 205. The wind was much stronger in June than has hitherto been recorded, and much damage was done, and the same may be said of the heavy rains at the end of the year, which also broke the record. February and March, May, August, July, and September were the driest months in the order given, and December, October, and January were the wettest.

---

* A beautifully executed photographic view of this piece of water is given at page 38 of Mr. H. W. Cave's "Picturesque Ceylon," vol. III.

4.—Henaratgoda Garden.

The Arachchi in charge, Mr. S. de Silva, is justifying his recent promotion from Anurádhapura, and is carrying on his new duties with energy and intelligence. Cattle trespass is still a great trouble here, and it is obvious that nothing but a good barbed-wire fence will be of effective use. I hoped to have been able to secure the fencing both for this and for Anurádhapura Garden this year, and when in London obtained an estimate of the cost. This, however, reached Ceylon too late for consideration, to my great regret. Early in the year an attempt was made by a neighbouring headman to establish a cart road through the Garden, which was however promptly suppressed by the Government Agent.

There are so many interesting economic plants in this Garden that labels are much wanted, but permanent ones are expensive, and our scanty vote will not bear the cost.

Mr. Nock reports on the Garden as follows :—

The garden has been kept in very fair order, but with so small a labour force it is quite impracticable to maintain it in anything like such condition as it should be. Real cultivation is practically at a standstill for the want of a good supply of manure, without which it is impossible to do much in the way of improving the growth of the different plants under trial.

Paths.—The old paths have been improved by being widened and having new turf verges laid down. One hundred and ten yards of a new path were made from the nursery leading towards the double cocoanut. Another great improvement has been in cutting down the jungle near the boundary line and laying out a drive from the bridge at the entrance, the distance being 675 yards, and the width of drive 10 ft. This when finished and gravelled, besides opening up the garden, will be a great comfort and convenience for visitors.

Nurseries.—All the old and useless plants have been grubbed up and twenty-four new beds made. These have been stocked with a fresh batch of cuttings and seedlings of ornamental flowering shrubs and palms and useful plants.

Fernery.—This has been much improved by the addition of four beds, and the replanting and filling in with new plants, and though small has become a pretty and interesting part of the garden.

Borders and Flower Beds.—The plants in these have been pruned, and what manure can be spared has been forked in among them. New plants and supplies have been set out at various times during the year. A new bed has been made on the lawn opposite the entrance gates and planted with showy foliage plants. These are all doing well, and the appearance of this part of the garden is very much improved.

Double Cocoanut.—The young plant is very vigorous and healthy, and it is interesting to see how each year a larger and stronger leaf is sent up. There are now ten leaves on it, varying in age from one to ten years ; the longest is 17 ft.

Conservatory.—The old decayed coir matting and roof-timber of this structure have been renewed. All the plants have been re-potted, and they and the building are now in good order.

Visitor's Shed.—This shelter is a wretched little place, and in a very bad state. It should be replaced by a more sightly, useful, and permanent building.

Visitors.—The number of persons who visited the gardens during the year was 124, being an increase of 59, or nearly double that of last year, which was 65.

Weather.—The first three months of the year were very dry, especially February, when the rainfall was 1·57 in., which fell on three days only. July and August were also very dry months, showing together a fall of only 2·92 in. On the other hand, the second and last quarters were noticeable for heavy rainfall. The quarter ending June 30 gave 38 81 in. on forty-seven days, and the last quarter 47·94 in. on fifty-four days. October being an unusually wet month, no less than 35·32 in. falling on twenty-seven days.

The total rainfall for the year was 14·06 in. above the average for the last four years, but the number of days on which rain fell was only five above the average.

The following table gives a monthly record of the rainfall, and the number of days on which it fell :—

	Fall. Inches.	Days.		Fall. Inches.	Days.
January ...	3·83 ...	7	July ...	1·02 ...	7
February ...	1·57 ...	3	August ...	1·92 ...	13
March ...	2·88 ...	7	September ...	4·74 ...	16
April ...	13·38 ...	17	October ...	35·32 ...	27
May ...	10·53 ...	18	November ...	6·67 ...	14
June ...	14·90 ...	12	December ...	5·95 ...	13

Total, 102·7 in. on 154 days.

5.—Anurádhapura Garden.

I was not myself able to visit this Garden during the year, but Mr. Nock, who was there in August, has given a full account of its condition. This gives me much concern, and it is indeed becoming a question with me whether the attempt to keep up this Garden any longer is worth making. The utter want of sympathy on the part of all the people, the indifference and even opposition of some officials, the very scanty funds (which render it impossible to effect any improvements, purchase manure, and properly house the coolies), and the distance from headquarters involving great expense and difficulty in transport, all tend to make me think that there is little to be done on the present lines, and to contemplate abandoning the attempt. It was in 1883 that I opened this Garden,

it being the successor of the one established by the late Mr. (afterwards Sir) J. F. Dickson, and transferred to my Department in 1881, at his suggestion, in the hope that more could be thus effected than he was able to do with it. The Provincial vote will again be unavailable for the Garden in 1896.

The following is Mr. Nock's report :—

The vote for this interesting and pretty garden of 15 acres is very small, viz., Rs 1,200, out of which the pay of the Conductor has to come. Until this year it has been supplemented by a Provincial vote of about Rs. 300, which has helped us considerably, and has usually been expended in the purchase of tools, carriage of plants from the other gardens, and for small improvements. This year, owing to some expenditure on native gardens of his own, the Government Agent could not see his way to grant us this vote, or even a part of it, and therefore little could be done beyond watering and keeping the place fairly tidy.

The trees and plants, both ornamental and useful, have grown well during the year, but it is disheartening that although numbers of plants have been raised for distribution very few have been applied for.

Manure here, as at the other branch gardens, is very much needed, but unlike the other gardens there is plenty of it to be had close at hand had we the means of transporting it. It was the intention this year to have bought a cart and pair of bullocks for this purpose and for carting gravel, out of the vote above referred to. A new hand-cart, watering pots, and a general set of garden tools, as well as a set of decent and permanent rooms for the few labourers, and a new plant-house are also urgently needed. Seats would be a great convenience, and I think would be an inducement for more people to visit and enjoy the garden. The cooly lines and plant-shed, which had fallen into a wretched state, were temporarily repaired and rethatched. This work was paid for out of the vote for contingencies from the Péradeniya Gardens.

At the beginning of the year the small ornamental pond was cleared out and a new set of aquatics put in. A drain was cut from the middle channel across the fruit-tree plot to conduct the water to this part of the garden, and thus save labour in carrying it by hand.

The roads and paths which had become overgrown with "kalanduru" (*Cyperus rotundus*) have been carefully dug up and cleaned, but the paths especially are badly in want of a good coating of gravel. A plot of land formerly occupied by plantain trees was cleaned and made into a new nursery and supplied with a stock of seeds, plants, and cuttings.

Much labour was spent in digging out white-ant nests and levelling the hills. Near the entrance gates a row of the small bamboos were planted to take the place of the unsightly jungle stick fence there.

A quantity of fruit-trees and ornamental plants have been potted into bamboo pots for distribution, and a number of fruit-trees have been planted out.

Many of the economic and useful trees and showy plants have made good growth, and there is no reason, except want of energy, why they should not be more largely grown in the district by the villagers.

In the early part of the year considerable damage was done to the pineapples, plantains, and arrowroot plants by porcupines. These animals have also taken to the tuberous roots of the Ceara rubber and have turned up the ground all about these trees. The damage by cattle trespass was again very considerable and annoying, and until the barbed-wire fence applied for can be obtained and erected this nuisance is sure to continue.

Weather.—The total rainfall for the year was 59·65 in., which fell on 103 days, against 45·56 in. of rainfall last year. The average rainfall for twenty-four years is 53·38, and of rainy days ninety-nine, which shows that the fall this year was much above the average, or 6·27 in., but of rainy days it was only four above the average.

The month of February was absolutely rainless, and May and July very nearly so, only ·06 in. falling in May on one day and ·04 in. in July on one day. Heavy rain fell in April, October, November, and December, totalling together no less than 47·47 in., against 12·18 in. only for the other eight months. So that the garden suffered from drought for the first nine months of the year, with the exception of April, and from floods during the last three months.

6.—Badulla Garden.

Nor was I able to get to this Branch during the year, and have again to depend on the reports of Mr. Nock, who paid his usual visits. I desire, however, to call especial attention to the very small vote granted for this now beautiful Garden of 11 acres, only Rs. 1,500 per annum, out of which have to be met the Conductor's pay of Rs. 35 per month and the purchase of Garden requisites. The amount remaining available for labour is about Rs. 80 per month, which, as Mr. Nock points out, is barely equal to the pay in England of one working gardener. If anything more is to be done here beyond merely keeping the ground fairly tidy, our vote must be increased.

I quote the following from the report of Mr. Nock for the year :—

Most of the trees and plants have made rapid and healthy growth, which has improved the general appearance of the garden very much, and it is now a very pleasant resort for the residents and visitors, and a real ornament to the town. A great improvement has been the building of a pretty and permanent bungalow for the Conductor. It was designed and constructed by the Public Works Department, and greatly improves the appearance of the gardens. It is to be hoped that the Public Works Department may soon be authorized to build also a permanent plant-house and a few rooms for the garden coolies.

An improvement has also been effected by reducing the height of the Madras thorn hedge on the lake side of the garden. From almost any part of the garden the water of the lake is now seen.

The majority of the fruit-tree plants, comprising over thirty kinds, are doing well, and many of them have fruited during the year. Their future success depends in a great measure on the labour and cultivation that can be given them. The Para-rubber tree has borne seeds. These ripen here about three or four months later in the year than at Heraratgoda. The Giant Bamboo, Durian, Pimento, several conifers, and other useful and ornamental trees have now become established, and prove to do well.

The borders and flower beds have been very gay with flowers of such things as *Phlox*, perennial and annual, single and double Indian pinks, Balsams, Zinnias, Heliotrope, *Coreopsis*, and *Chrysanthemum*. With increased labour a great deal more might be done in this way. Labels and a few seats are very much needed both for the

A quantity of fruit-trees and plants of economical and ornamental trees and shrubs have been supplied during the year to the residents and resthouses in the district, but I regret that, though no fault of our own, we have been unable to supply all demands for such plants. I think a sufficient answer to any complaint on this score is our want of men and money. It is to be hoped that ere long a sufficiently increased vote will be granted to allow of the introduction, propagation, and distribution into the district of many more economical, useful, and ornamental plants, especially of fruit-trees likely to succeed. This was the intention when the garden was first opened, but owing to the withdrawal of prison labour it has been impossible to carry this out to anything like the extent intended.

Weather.—The rainfall, though not up to the average, was over 10 in. above that of last year, and was well distributed; the actual figures being 62·85 in. of rainfall on 136 days, against 52·23 in. on 120 days in 1894.

The monthly rainfall and number of rainy days are as follows :—

	Fall. Inches.	Days.		Fall. Inches.	Days.
January	6·48	11	July	·08	2
February	·55	5	August	1·85	7
March	2·27	8	September	1·96	5
April	4·95	13	October	13·63	29
May	1·23	10	November	4·84	16
June	5·47	11	December	19 54	19

7.—Interchange of Plants and Seeds.

The exchange relations with other Botanic Establishments have been vigorously kept up, Wardian cases, boxes of bulbs and orchids, and a large quantity of seeds having been forwarded and received.

9.—Notes on Economic Plants.

Tea.—This year has been a most favourable one for tea; the yield everywhere has been good, and the increase in our exports greater than was anticipated. The total export was 98,581,061 lb., against 84,591,714 lb. last year, showing the very large increase of over thirteen million pounds (nearly as much as the whole crop of 1887).

The area now covered with tea is estimated at over 300,000 acres, and a small but steady extension is still going on.

The average price remained much as in 1894—*i.e.*, about 8½*d.* per lb., or perhaps a little more. It is gratifying to see a substantial increase in the export to Australia, which attained over nine million pounds (9,109,592 lb.), during the year.

Coffee.—A remarkable and interesting fact is a large increase in the export during 1895, this being more than double that of 1894, viz., 65,833 cwt. This is the first time for many years that this has occurred. A gratifying circumstance, too, is that 6,076 cwt. of this is "native" coffee—nearly four times the amount of last year. It is to be understood that the increase is due not to any increased acreage, but to better crops; probably with less chances of infection, coffee has now to bear fewer "attacks" of leaf-disease, and so is able to ripen more fruit.

Liberian coffee, however, as yet shows no increase; but this seems likely to be altered in the future, as a considerable area has been planted in recent years and mostly appears to be doing well.

A small plantation of 36 plants of Sierra Leone or "upland coffee" (*Coffea stenophylla*) received from Kew in 1884 was made in April, and plants of *Lonchocarpus*, sp. (the one used in Trinidad as a shade-tree for cacao), planted among them for shade. The growth of the coffee plants has been very irregular, varying from a few inches to 3 ft., and cannot be said to be very promising. They have the appearance of plants out of their element, and look as if the climate here did not suit them. On the other hand, the *Lonchocarpus* is certainly at home, having grown very rapidly with a branching habit, and it promises to be a very useful shade-tree at low elevations. Some of the shoots have grown 8 ft. in nine months.

A plant of the "Abeokuta" coffee from Lagos was received from Kew in August.

Cacao.—This product has also yielded much better the last year, the exports being 27,522 cwt.—a very appreciable increase over last year.

A case of the Nicaraguan cacao, discovered by Mr. Hart and referred to in my last report, was received from the Government of Trinidad on September 13. Thanks to careful packing, the plants were in very good condition after their long journey of fifty-five days. The case contained sixteen Nicaraguan cacaó plants and twelve *Forestero* plants from Trinidad, in all twenty-eight plants, as follows :—

From Nicaragua :—
2 Theobroma Cacao, var. *pentagona*.
1 do. var. *angustifolia*.
13 do. var. *Criollo*.
From Trinidad :—
12 Theobroma Cacao (var. *Forestero*).

All were alive, only two being doubtful, one of which has since died ; but this being one of the Trinidad Foresteros its loss is of no consequence. The plants were carefully nursed in the plant-sheds until they showed signs of fresh growth, when they were potted in large pots and placed under shade in the nursery to become established before planting out in the next south-west monsoon. I am very glad to possess these varieties, especially *T. pentagona*, and shall be curious to compare its fruit and seeds with our " old red " kind.

Sisal Hemp.—These have been growing much better during this year, and a few hundreds of young plants have been propagated from them. These will be ready for distribution in the course of a few months' time should any one wish to experiment with this fine fibre-plant.

Cubebs.—The drought in the early part of the year killed one of our two cubeb plants ; and the remaining one looked very bad for a time, but has now made a start, and promises to become established.

Para Indiarubber (*Hevea brasiliensis*).—The very hot weather in March caused a good many of the blossoms to wither, and as the bad weather in May and June accompanied by high winds caused considerable damage to the young capsules, it was expected that the crop would be a poor one. However, owing to many more trees flowering this year. and the favourable weather in July, August, and September, we were able to supply all demands for seeds, and had a large quantity over for the nursery. The total crop was very nearly 100,000, 76,750 of which were sold, being advertised in the newspapers at Rs. 10 per 1,000 ; 2,000 were sent to Badulla Garden nursery and 1,000 to Anurádhapura, and the rest (20,000) were sown in the nursery here. These have grown into fine healthy plants, and are now ready for distribution.

None of the trees have been tapped this year. It has been usual to do this only in every alternate year, but the trees are now of such an age and size that they may be safely tapped every year. They have grown very much during the last twelve months, and many of them are now over 6 ft. in circumference at one foot from the ground, and would yield an appreciable quantity of rubber.

When in London I obtained, through Kew, a report from Messrs. Hecht, Levis, & Kahn on a sample of the rubber collected at Henaratgoda in 1894. It was considered of excellent quality, and valued at from 2*s.* 4*d.* to 2*s.* 1*d.* per lb., according to cleanliness from bark, &c.

Cola acuminata.—Another small plantation of twenty-three plants has been set out during the year at Henaratgoda, and most of them are doing well. The older trees have grown fast and look healthy, but have not yet flowered. The largest tree is now over 30 ft. high, but is only 12 in. in circumference at one foot from the ground. The Conductor has been successful in raising five plants from cuttings.

Bertholletia excelsa ("Brazil Nut") is growing very rapidly at Henaratgoda, is perfectly healthy, and a noble and handsome tree. It flowered in June, but, probably owing to the rough weather then, it has set no fruit. It is 64 ft. high and 3 ft. 4 in. in circumference at one foot from the ground.

Payena Leerii.—This, besides giving Guttapercha ("Gutta Sundek"), is remarkable in appearance, and will be valuable as an ornamental tree for planting at low elevations. It did not flower at all this year at Henaratgoda, but shows signs of flowering again next year. So far we have not been able to propagate from cuttings. The largest tree is 40 ft. high.

Uncaria Gambier.—A few seeds of this, from our own plants, were sown at the beginning of the year at Henaratgoda and germinated in March. The growth at first was very slow, but they made a start at the latter part of the year, and we have now twenty-five healthy plants 4 ft. 6 in. high, so that at last there seems a chance of getting this acclimatized here. Some seed received from Kew did not germinate.

Erythroxylon Coca.—Of this we have now a large stock of fine healthy plants, but there is practically no demand for them. It is rather surprising that no effort has been made to grow our large-leafed sort on a commercial scale here, as it seems likely to prove profitable. Mr. T. Christy, of London, has lately reported on some of this sort sent from Assam, which had been fired and dried, and was curled up like tea. Pronounced at first to be valueless, it was found on analysis to be very rich, and worth 1*s.* per lb., the price of the small-leaved Java sort being only 3*d.* Mr. Christy believes that higher prices still, 1*s.* 6*d.* to 1*s.* 8*d.*, would be obtained for leaf so prepared for the extraction of alkaloid.

Camphor.—Owing to the war between China and Japan there was a scarcity of this drug at the beginning of the year, and as prices rose very high many inquiries were made for the seedling plants mentioned in my last report. We were able to distribute 975 plants to thirty-seven applicants. The number of localities where they have been planted for trial cannot be far short of fifty, and they vary from the highest to the lowest, and from the driest to the wettest localities, so that it will soon be seen in what climate they thrive best, but the tree is scarcely a native of the tropics. At Hakgala, with an average mean temperature of 62° and a rainfall of 89 in., the plants are doing well, and we have also some very healthy plants in the Anurádhapura Garden, where the mean temperature is about 80° and the rainfall 53 in. A small trial plot has been formed at Hakgala, and 200 plants have been planted out 12 ft. apart every way.

During the year Mr. Nock made an attempt to obtain some camphor from the wood of a tree at Hakgala, six years old, by distillation of the chips as described, but was not successful.

"*Sabai Grass*" or "Bhabar Grass" (*Ischœmum angustifolium*).—Seeds of this were received at Hakgala from the College of Science, Poona, at the beginning of August. They germinated well, but have not grown very fast. This grass is a native of North India, and is used for paper-making and in the construction of strings, ropes, and mats. It is common in the Western Himalaya, and grows best on a dry sloping site, and it is usually propagated from division of the roots. As a fodder, it is eaten by cattle when young.

Rumex hymenosepalus ("Canaigre").—A box containing 30 lb. of roots of this valuable tanning plant was received at Hakgala at the end of the year in good condition from the Bureau of Agriculture and Forestry, Honololu. They have been planted out in well prepared rich soil in the walled-in nursery for trial. If our soil will grow it, this will be a useful addition to our minor products, as there appears to be an unlimited market for the sliced and dried roots of the plant. It is a native of Arizona and New Mexico, where it grows in the driest regions. It is figured in Bot. Mag. t. 7433. The dry root contains about 33 per cent. of tannic acid—a higher average than the very best oak-bark.

Fruit Trees at Hakgala.—Mr. Nock reports :—

Several of the fig and peach trees bore a heavy crop, but unfortunately just as they were beginning to ripen the high winds at the burst of the south-west monsoon blew nearly every one off and greatly damaged the trees. The English blackberries during June and July produced a very good crop of well-formed and good flavoured fruit. It has now been proved that this fruits well and regularly, and can be recommended to all gardens at high elevations. It requires deep rich soil and to ramble over a fence. A few apples ripened in September ; the largest was 10 in. in circumference, 3 in. deep, and weighed six ounces. It was as fine looking an apple as any one could wish for, and was perfect in colour and flavour. They require a rich free soil, which should be well drained, as they are very liable to canker.

In the early part of the year we received by parcel post from the Government Botanic Gardens, Saharanpur, one plant and six cuttings, each of fourteen varieties of Asiatic plums and one Chinese pear. They arrived in capital condition, and I am pleased to be able to report that every one of the plants and a good many of the cuttings have grown well. It was thought at first that as they came from a very dry country they would not be likely to thrive here, but they are in growth and foliage so much like the little cooking-plum that grows and fruit so well that I have great hopes of them, and from the splendid start they have made it is quite possible that we may get fruit from them next year.

Other Fruits.—A grape-vine presented by the Rev. Father Anthony has made a good start at Anurádhapura Garden, and promises to do well. It is only ten months old, but has put on some strong shoots and plump eyes, which have every appearance of producing fruit after the next pruning.

Eight plants of the celebrated loose-skinned orange have been introduced from Nagpur. They arrived in capital condition, and promise to do well at Badulla. It is proposed to propagate from them by buds and grafts as soon as possible.

"*Crawford's Cutch Company.*"—This Company has obtained from Government a monopoly for the collection of the bark of the mangrove trees growing on Crown land in the Trincomalee District, where they have established a manufactory of "cutch," paying a royalty per ton on all exported.

This so-called "cutch" is an extract from the mangrove bark, and not the true "cutch," which is an extract from the *wood* of *Acacia Catechu* manufactured in Burma and Northern India. Mangrove bark has long been extensively used by the native tanners, and there is a small export to India.

10.—Herbarium, Museum, and Library.

Herbarium.—No additions to the General Herbarium have been acquired during the year but many additional specimens were mounted and laid in the Ceylon Herbarium, in connection especially with the Director's work on the Flora, during the early part of the year.

The draughtsman and plant-collectors during my absence made excursions to Ratnapura, Balangoda, and Haputalé Districts collecting. The former has during the year made 26 finished drawings of Ceylon plants and six of exotic Orchids.

Museum.—In February I went carefully over the collection of 200 slabs of wood received in 1884 under their native names from the Pasdun kóralé, and labelled them with their Botanical names. It was with surprise and disgust that I found that very many, though labelled with different Sinhalese names, had obviously been cut from the same logs, thus 20 differently labelled slabs were "dawata" wood and 13 were "ná," the actual number of different sorts being reduced from 200 to 128.

"*Handbook to the Flora of Ceylon.*"—The third part or volume of this appeared in London on August 1, with a further instalment of plates (Nos. 51–75). It continues the descriptions of the plants to the end of the *Balanophoraceœ*, *i.e.*, 734 more species. One more part will complete the book, and I had hoped to do much toward its preparation in London (at Kew and the British Museum), but was hindered by indifferent health. Some solid progress has been made, however, and I hope to be able to finish this heavy piece of work by the end of the year at Péradeniya.

Protection of wild Orchids.—As there was some danger of our rarer and more showy orchids, especially *Dendrobium Maccarthiæ*, becoming eradicated by the practice of gathering them for export, I am glad to report that a Government notification has been published in the *Gazette* directing that their collection will not in future be permitted in Crown Forests in the Central, Southern, and Sabaragamuwa Provinces without a special permit from the Government Agent, which will be issued only on the recommendation of the Director of the Royal Botanical Gardens and with the concurrence of the Conservator of Forests.

11.—Receipts from Sales.

Though the receipt from sales at the Péradeniya, Badulla, and Anurádhapura Gardens are less than last year, there has been a considerable increase at Hakgala and Henaratgoda, owing chiefly to the sale of camphor plants at the former and of para rubber seeds at the latter Gardens.

The receipts of the year were :—

	Sales. Rs.	c.	Number of Purchasers
From Péradeniya	2,107	19	... 430
Hakgala	1,302	28	... 157
Henaratgoda	836	27	... 102
Badulla	57	45	... 13
Anurádhapura	35	97	37
Total ...	4,339	16	739

The estimated value of plants and seeds supplied gratis is :—

	Rs.	c.
From Péradeniya	333	69
Hakgala	458	0
Henaratgoda	44	75
Badulla	55	75
Anurádhapura	8	0
Total ...	900	19

12.—Expenditure.

The total cost of the Department for the year has been :—

	Rs.	c.
Salaries (including Exchange Compensation and 10 per cent. increase) ...	21,534	60
Gardeners' and Labourers' Wages :—		
Péradeniya	7,499	10
Hakgala	3,999	99
Henaratgoda	2,199	92
Badulla	1,479	44
Anurádhapura	1,199	95
Travelling and Collecting ...	1,978	70

Supplement to this day's issue.

WILSON, SMITHETT & CO.'S TEA REPORT FOR 1895.

WILSON, SMITHETT & CO.'S CEYLON TEA MEMORANDA FOR 1895.

LONDON, MARCH, 1896.

The chief feature of the market during the larger part of the year under review was, unlike that of its predecessor, the maintenance of comparatively high rates for good common whole-leaf and the moderate value of good to fine tea—one of satisfaction as regards low-lying districts, but of no little disappointment to some of the best known up-country gardens, whose teas had realised high prices generally during 1894. The scanty supply of common tea at the close of the latter year, consequent on the fine average quality of the Indian crop, caused a sharp advance for Souchongs for "price" as well as for low-priced Pekoes, and the opening sales of the year realised an average price 1½d per lb. higher than that of the first week of 1894. Finest and good medium teas also maintained firm rates for the first month or so. During the long spell of frost in February and March trade generally became somewhat paralysed and the considerably heavier supplies of inferior quality experienced a very languid market. The position of tea for "price" was, however, too strong to allow of any very pronounced decline for this class, and a comparatively high quotation was maintained, with but slight occasional fluctuations throughout the Spring. This firmness was, however, only maintained at the expense of medium Pekoes and Broken Pekoes, the former frequently realising only ½d per lb. above the Pekoe Souchongs, while the latter became a complete drug in the market, considerable unsold stocks of this grade being held over, which were eventually only disposed of at heavy losses. During the Spring and Summer months the general average showed very little change, falling to the lowest point in June and July, when supplies were heaviest and the quality poorest; after this the position of the best liquoring tea improved, whilst common Souchongs tended rather lower in sympathy with Indian, which, arriving in heavy quantities, proved generally of very inferior quality. From August until the end of the year the attention of the trade was chiefly directed towards good medium teas of all grades, and these gradually and steadily advanced in values, the position of common whole leaf being further assailed by the increasing weight of low grade Indian leaf.

The weight of Ceylon Tea offered in auction between January 1st and December 31st, 1895, amounted to about 80,000,000 lb. against 74,000,000 lb in 1894, and 69,000,000 lb. in 1893, and realised an Average price of 8¾d per lb. against 8½d in 1894, and 9d in 1893.

The market re-opened, after the Christmas holidays of 1894, with a very firm tone for all classes of Ceylon Tea; whole leaf up to 9d per lb.—both Pekoes and Souchongs—being especially in demand at advances of ¼d to ¾d per lb. The quality generally was now beginning to show some falling off, and, amongst the higher grades, Broken Pekoes up to 10d per lb. and finest commanded firm rates. Throughout January leaf-tea continued to harden, but, with a gradual decline in quality, Broken Pekoes commenced to recede in values. In Feb. the heavy supplies coming forward adversely affected the market generally, a decline of ¼d per lb. was soon established for Souchongs for "price," whilst for other descriptions quite ½d per lb. had to be conceded in order to effect sales. The severe weather which set in at this period had a very depressing effect upon trade, which was further aggravated by the amount of illness that followed in its train, and each week brought a lower range of prices until, at the close of the month, the general average had declined to 9¼d per lb. from 10d at the earliest sales of the year. During March the tension remained almost unrelieved, and the bidding in auction was, for the most part, of a very spiritless character, but towards the close a very fair demand set in for leaf tea up to 7d per lb., more than counter-balanced, however, by a further decline of ¼d to ½d per lb. for medium Pekoes, and of about 1d per lb. for the majority of Broken Pekoes. The month of April opened with a still further depression. The result of the comparatively high rates established for common Ceylon and Indian in stimulating the consumption of China and Java teas at the expense of the former, was fully reflected in the trade statistics at this period. Souchongs for "price" at the earliest sales of this month marked a temporary decline of ¼d per lb., but utter apathy prevailed with regard to ordinary Pekoes and Broken Pekoes, the former selling ½d per lb., and the latter generally 1d below the rates current a month previous. In the middle of April prior to the Easter holidays, a rather better tone prevailed, Souchongs and low Pekoes experienced a fractional recovery, and even Broken Pekoes were better supported. After Easter, the improvement was still more noticeable, teas for "price" advancing ¼d per lb., whilst the better liquoring Broken Pekoes were also somewhat stronger. Early in May after the declaration of the Budget proposals, which left the Tea-duty untouched, the trade once more took heart, and, despite the heavy sales, Souchongs for "price" were strongly competed for at a fractional advance, and good medium sorts frequently ruled ½d per lb. dearer; the general average was now 8½d. Throughout the month a firm tone prevailed, especially for leaf tea up to 7d per lb., Pekoes, however, about this figure ruled comparatively cheap. The proportion of common tea was now very large, and for this reason the average dropped to 8d at the close of the month. In June the heavy sales chiefly affected medium kinds; common tea, unless of exceptional inferiority, remained steady, and fine, which was very scarce, marked and upward tendency. By the end of the month the average was reduced to 7¾d per lb., consequent upon the increased proportion of common quality. July opened with active competition generally at the current low rates, good liquoring sorts tending upwards; common Broken Pekoes, however, were neglected, selling under 7½d per lb. By the middle of the month the General Elections interfered considerably with trade in the country, but dealers, recognizing the good value current, proved active buyers and the month closed with a better tone all round and an average price of 8½d per lb. After the August Bank Holiday a quieter tone supervened, and tea for "price" inclined rather easier in sympathy with Indian leaf; at the close of the month all lost ground was recovered, and medium Teas participated in the firmness. By September the supplies became more moderate, and the demand continuing steady, all classes maintained an upward tendency, especially good medium Pekoes and Broken Pekoes. The quality, too, now commenced to show an improvement, and all the best invoices were actively competed for, and commanded hardening rates. Throughout the month this improvement steadily continued, and at its close the general average stood at rather over 9d per lb. During October the market ruled very firmly, but the activity of the trade was chiefly directed towards up-country Pekoes and Pekoe Souchongs, which were then showing excellent strength and quality; these grades advanced considerably in value throughout the month, whilst Souchongs for "price" and finest teas—the result of fine plucking—remained practically stationary towards the end of the month, indeed, common leaf tended rather easier, owing to the heavy arrivals of Indian of poor quality, and by the first week in November a decline of ¼d to ½d per lb. was established for leaf tea, up to 8d per lb. As the month progressed the low rates current for the increasing supplies of common Indian tea had a depressing effect upon the corresponding class of Ceylon, which, despite the moderate extent of the auctions, experienced a sharp decline of ¼d to ½d per lb. during the month, when the general average was reduced to 9d from the highest point—9¾d—in the middle of October. During this time good to fine Pekoes and Pekoe Souchongs continued to rule very firmly, strong Continental competition materially assisting in the realisation of full prices, but Broken Pekoes over 1s per lb., unless of exceptional strength and quality, were scarcely so well supported. In December a more confident tone became apparent, and the downward progress of common tea was stayed; competition continued to centre upon good medium leaf tea, Pekoes about 10d per lb. especially showing a gradual advance in value. The year closed with an active demand both from the home trade and from the Continent for all whole-leaf tea, but with a rather weaker market for Broken Pekoes over 1s per lb., the general average standing at a little over 9d against 10d at the close of 1894.

The increasing demand for Ceylon tea from extraneous markets continues to present one of the most gratifying features in the extraordinary and rapid development of the Island's tea industry. Whilst China and Java exports from this country to the various markets of the world continue to decrease, and Indian show a very moderate increase, the shipments from this country of Ceylon leaf advance by leaps and bounds, and during the year under review were 40 per cent. in excess of those in 1894. On the continent Russia continues our best customer, and as the leading firms in that country are either directly represented, or have agents in London, the despatch of samples of all the suitable teas prior to their being offered in sale has become an established practice, and the numerous orders on Russian account, have, consequently, been very instrumental in ensuring for Pekoes and Pekoe Souchongs the maximum amount of competition at auction. Important as our trade with Russia in Ceylon tea has become during the past year or two, it bids fair to be developed to a far greater extent in the future. It is some ten years ago since we first sold Ceylon tea for that country, but till within the last twelve months or so the large distributors of tea in Moscow, &c., bought only teas without tip, so that they should blend with China teas without materially altering the appearance of the leaf; gradually, as the blends containing the new leaf found increasing favour with the consumer their true character became more openly recognised, until to-day the name of Ceylon is actually advertised. In America and Canada too, considerable progress has been made in the introduction of Ceylon leaf, as is amply testified by the latest Board of Trade Returns.

Successful as the efforts to introduce Ceylon leaf into foreign markets have hitherto proved, a large field yet remains comparatively unexploited, and it is by compelling the attention of the distributor rather than the actual consumer that we look to see the use of Ceylon tea extended to all tea-drinking countries. Without the active co-operation of the former, any demand of the latter stands in danger of being either neglected or gratified by spurious imitations of the real article. And although no little benefit must accrue from bringing the merits of Ceylon tea before the public in different countries, yet we firmly believe the chief power and ability to push the article rests with the large buyers here, who are ever on the alert to find new and remunerative outlets for the increasing supplies they are called upon to deal with.

Quality during 1895 was on the whole scarcely equal to that of the preceding year. This was most marked during the spring and early summer months, when the disappointing results obtained for many of the crack up-country marks were not so much due to the greater attention paid to low-priced tea as to lack of distinctive character and point. During the autumn months the quality left little to be desired.

Grading.—On those Estates sending home the heaviest weight of tea it would, we think, be good policy to sort into four important grades (not reckoning occasional breaks of dust and broken tea). During many months in the year, especially when quality is below par, the supply of Broken Pekoe is considerably in excess of the demand, and consequently this grade rules at an unduly low range of prices. This tendency might perhaps, be to some extent modified if the proportion of Broken Pekoe proper were restricted to a smaller quantity of thicker liquoring tea, the balance taking the form of an Orange Pekoe. In view of the increasing export demand for Ceylon tea, which is practically confined to whole leaf grades, it would seem as if Orange Pekoes, Pekoes, and Pekoe Souchongs would be likely to command the steadier competition taking the whole year round. It is extremely difficult to lay down any arbitrary rule in this respect, as the demand for the higher and lower grades of Ceylon tea is to a very great extent governed by the quality and character of the Indian crop, a factor which can be gauged and acted upon with more advantage on the estate than in accordance with advice from this side. We may, however, lay stress upon the desirability of avoiding Dusty teas of any grade. The economy of including dust in any of the important grades is, we are sure, a false one. In full markets, when buyers are apt to be somewhat hypercritical, Broken Pekoes containing any appreciable quantity of dust prove most difficult of sale, and the presence of dust in whole-leaf grades is always a drawback, especially in those foreign markets which are now being so assiduously cultivated.

Our table of estates this year comprises 659, which have sold 20,000 lb. and over on the London market under their own marks during 1895. The general average of the entire sales was a fraction above that of 1894, which is in itself a highly satisfactory feature, and, bearing in mind that during the past year the price of silver reached its lowest record, producers may be fairly congratulated on the prosperity of their industry. An analysis of the results bears out fully our opening remarks that during 1895 quantity benefited at the expense of quality, the chief reductions to be noted occurring in the averages of some of the best marks, whilst a considerable number of improved results are to be found in the ranks of the medium and low-grown estates.

SUMMARY OF CEYLON TEA SOLD AT PUBLIC AUCTION IN LONDON

Between January 1st and December 31st, 1895, estimated quantity in lb. and average prices realised.

Average Price for the year 8¾d per lb., against 8½d in 1894, and 9d in 1893.

The initial letters following the estate names represent the mean elevation, as follows:—

L (low) sea level up to 1,000 feet—M (medium) 1,000 to 2,500 feet—HM (high medium) 2,500 to 3,500 feet—H (high) 3,500 to 5,000 feet—HH (highest) above 5,000 feet.

BOARD OF TRADE RETURNS.

Imports of Tea during the past four years:—

From	1895. lb.	1894. lb.	1893. lb.	1892. lb.
India	123,233,329	118,567,243	115,582,381	112,055,848
Ceylon	82,973,373	76,146,414	72,760,437	66,041,630
China	40,038,882	43,861,356	56,119,917	57,050,718
Other Countries	8,405,296	5,899,612	5,454,646	4,297,281
Total for twelve months	254,650,880	244,474,625	249,917,381	239,445,467

Home consumption of Tea during the past four years:—

From	1895. lb.	1894. lb.	1893. lb.	1892. lb.
India	116,343,316	116,965,653	108,143,602	102,528,168
Ceylon	74,023,810	71,570,078	64,218,061	63,102,127
China	26,201,377	22,980,705	32,060,080	38,130,453
Other Countries	5,231,637	2,824,608	3,675,612	1,360,077
Total for twelve months	221,800,140	214,341,044	208,097,385	207,120,825

Exports of Tea during the past four years:—

From	1895. lb.	1894. lb.	1893. lb.	1892. lb.
India	3,924,551	3,551,282	3,423,440	3,792,650
Ceylon	7,093,441	5,166,020	4,112,232	3,480,934
China	18,267,056	22,087,686	25,352,803	27,954,059
Other Countries	978,364	1,089,183	1,288,250	2,425,058
Total for twelve months	30,263,422	31,894,171	34,176,725	37,652,701

Stock of all Tea in Bonded Warehouses (in U. K.) at the close of the past four years:—

	1895. lb.	1894. lb.	1893. lb.	1892. lb.
All sorts	103,480,802	102,062,345	102,360,264	98,244,217

Home Consumption of Indian and Ceylon Tea compared with that of China, Java &c. last year, five years ago and ten years ago taken from the BOARD OF TRADE RETURNS:—

1895. lb.	Per centage of total.	1890. lb.	Per centage of total.	1885. lb.	Per centage of total.
Indian 116,380,000	52.46	102,000,000	52·6	Indian, Ceylon 69,000,000	37.7*
Ceylon 74,000,000	33.38	34,500,000	17·8		
China, &c. 31,400,000	14.16	57,500,000	29·6	China, &c. 114,000,000	62.3
221,700,000		194,000,000		183,000,000	

* The figures relating to Indian & Ceylon were not separated at this date, but the Home Consumption of Ceylon was about 3,200,000 lb. or about 1.7 per cent of the total.

Monthly Imports of Ceylon Tea during the past five years:—

	1895. lb.	1894. lb.	1893. lb.	1892. lb.	1891. lb.
Jan.	7,208,978	8,000,272	4,672,600	5,070,234	2,885,804

GEO. WHITE & CO.'S TEA REPORT FOR 1895.

GEO. WHITE & CO.'S ANNUAL INDIA, CEYLON AND JAVA TEA REPORT FOR 1895.

LONDON, 31, FENCHURCH STREET, E.C.,
19th March, 1896.

Uncertainty regarding supplies, especially from India, has been one of the chief features noticeable during the season drawing to a close. Although the amount from every quarter will probably not after all be excessive, still the fear of this has for the past six months had rule to an unsatisfied state, and every endeavour should therefore be made to further develop other markets in view of the increased quantity which will have to be dealt with when the large acreages planted both in India and Ceylon during the last year or two come into bearing.

INDIA.—Original estimates of 1895 crop, compiled by the Indian Tea Association of Calcutta, in April, showed 126½ million lb. as available for Great Britain, which, coupled with the poor quality of first arrivals, depressed buyers, and prices ruled very low until in August, Pekoes were selling down to 5½d. per lb., and Pekoe Souchongs 4½d. per lb. In October a fresh estimate was issued of the same figure lessening the probable amount for this country to 124 million lb., while in February it was further reduced to 121 million lb. South India will also furnish another 2½ million lb., which will not be included in shipments from Calcutta.

The better quality, especially from Assam, coming to hand towards the close of the year, and the desirable character of the cold weather Teas coupled with advices of a smaller out-turn than was expected, imparted confidence, and there was good all-round buying. The 1895 yield will not compare favourably with its predecessor; however it has on the whole, been of a useful description, and gone freely into consumption, as will be seen by the deliveries of the six months to 31st December last, which were 59,382,000 lb., against 55,715,000 lb. for the previous half year, when clearances were checked, owing to the high rates ruling for common to fair descriptions.

From 1st July, 1895, to the end of February, 1896, the average for 800,000 packages sold on garden account was 9d. per lb., against 10½d. per lb. for 733,000 packages in 1894-5 and 9d. per lb. for 746,000 packages in 1893-4. Prices during the season under review have not fluctuated so much as in former years, probably due in a great measure to the crop being of a mediocre character, and without the variations in quality sometimes noticeable.

CEYLON.—The out-turn of 1895 shewed a considerable increase, and shipments in the twelve months from Colombo to the United Kingdom were 85,753,000 lb., compared with 75,350,000 lb. in 1894, and 75,552,000 lb. in 1893. During the same periods the quantities sold in London were:—

1895,	1894,	1893,
950,000 packages;	876,000 packages;	834,000 packages;
(Av., 8¾d per lb.)	(Av., 8¾d per lb.)	(Av., 9¼d per lb.)

and, considering the much larger amount which had to be dealt with, it must be gratifying to those interested in the industry to find that the price for the year ending 31st December was maintained as against 1894, while at the same time exchange ruled fractionally in favour of growers.

It is also satisfactory to note that consumption kept pace with arrivals as, from the 1st January to 31st December 1895, they practically counterbalanced each other, imports being 78,739,000 lb. and Deliveries 78,637,000 lb.

The highest weekly average was recorded in the early part of January when it touched 10½d. per lb., from which it gradually declined until the end of June, when it fell to 7½d. per lb., rising again by degrees to 9¼d. per lb. in the early part of December, which will partly serve as an index of the various phases of the market. Taken all round quality was maintained and, no doubt, to some extent, this helped to popularise Ceylon Teas in quarters where China Congou has hitherto been largely used.

JAVA.—There has been a steady increase in the use of Java growths which have come into better favour since the introduction of Assam seed, the leaf plucked from plants raised from this being more suitable to the requirements of the home trade than formerly. Consequently there was greater inducement to ship to this country, imports for the 12 months of 1895 being 4,441,000 lb., against 2,806,000 lb. in 1894, which was virtually all absorbed.

EXPORTS FROM THE UNITED KINGDOM.—The total amount exported from the United Kingdom during the past eight months, compared with the two previous years, is as follows:—

From 1st July 1895 to end of February 1896:—

	India.	Ceylon.	Total British Grown.	China.	Java
	lb.	lb.	lb.	lb.	lb.
1895-6	2,736,000	4,856,000	7,592,000	12,385,000	720,000
1894-5	2,391,000	3,443,000	5,834,000	14,220,000	534,000
1893-4	2,455,000	2,867,000	5,322,000	17,411,000	882,000

and the distribution for the three complete years, as taken from statistics furnished by the courtesy of H. M. Customs is,

		Continent of Europe	United States.	Canada.	Other Countries	Total
		lb.	lb.	lb.	lb.	lb.
India,	1895	1,592,000	909,000	780,000	644,000	3,925,000

Java, &c.	,,	657,000	111,000	61,000	149,000	978,000
China	,,	9,751,000	1,075,000	2,206,000	5,235,000	18,267,000
Total..		15,820,000	3,518,000	4,081,000	6,844,000	30,263,000
India,	1894	1,570,000	709,000	711,000	509,000	3,499,000
Ceylon	,,	2,715,000	812,000	958,000	629,000	5,121,000
Java, &c.	,,	704,000	152,000	37,000	195,000	1,088,000
China	,,	12,711,000	1,558,000	3,160,000	4,379,000	21,968,000
Total..		17,700,000	3,231,000	4,866,000	5,882,000	31,679,000
India,	1893	1,276,000	648,000	684,000	413,000	3,321,000
Ceylon	,,	2,149,000	717,000	738,000	467,000	4,088,000
Java &c.	,,	1,016,000	63,000	43,000	135,000	1,267,000
China	,,	15,334,000	1,360,000	3,490,000	4,667,000	24,851,000
Total..		19,875,000	2,988,000	4,955,000	5,682,000	33,500,000

In addition to the above it is computed that 2½ million lb. of India and nearly 1 million lb., of Ceylon were delivered "overside," in 1895, from the Port of London on arrival for transhipment to other countries, and, therefore, were not taken account of in Imports to the United Kingdom.

The following is a Comparative Table, shewing IMPORTS of Tea into the Port of London from India, Ceylon and China, for twenty one Seasons.

		India.	Ceylon.	Total British grown.	China.	Total British-grown & China Imports.
		lb.	lb.	lb.	lb.	lb.
Season	1875-76	25,500,000	200	25,500,200	149,000,000	174,500,200
,,	1876-77	29,000,000	1,700	29,001,700	156,000,000	185,001,700

,,	1889-90	100,685,000	34,290,000	134,975,000	89,600,000	224,575,000
,,	1890-91	100,984,000	50,191,000	151,175,000	69,742,000	220,917,000
,,	1891-92	111,017,000	63,768,000	174,785,000	69,214,000	243,999,000
,,	1892-93	107,509,000	65,139,000	172,648,000	54,580,000	227,228,000
,,	1893-94	114,508,000	72,124,000	186,632,000	64,379,000	251,011,000
,,	1894-95	115,261,000	76,287,000	191,548,000	46,470,000	238,018,000
,,	1895-96 Partly Estimated	121,000,000	85,000,000	206,000,000	42,000,000	248,000,000

Duty, until 30th April, 1890, 6d. per lb., afterwards 4d. per lb.

N.B.—"Overside" Transhipments for the Continent, America, Canada, &c., via London, are not included in the above. Prior to Season 1885-86, the Ceylon figures given represent TOTAL EXPORTS from Colombo, the proportion sent from there to Foreign ports before that date being inconsiderable. Arrivals from Java are omitted, as they vary in different years, being regulated according to the state of the markets which take them.

The following figures will show the Exports from Calcutta and Colombo to other Ports than Great Britain which mark a considerable development, &c.

India, Season.	Australasia.	Asia	America.	Continent of Europe.	Total.
	lb	lb	lb	lb	lb
1895-6	6,581,000	4,915,000	1,054,000	279,000	12,829,000
1894-5	4,817,000	3,761,000	588,000	240,000	9,406,000
1893-4	3,938,000	2,657,000	315,000	447,000	9,357,000
Ceylon, twelve months:—					
1895	9,380,000	1,187,000	394,000	890,000	11,851,000
1894	7,177,000	1,053,000	216,000	345,000	9,091,000
1893	6,969,000	1,174,000	112,000	426,000	8,581,000

Although for many years it has been thought desirable, no active steps have yet been taken to verify the actual stock in the London Bonded Warehouses, as given by the Tea Brokers' Association. It has, however, been found necessary to alter the weight at which half-chests and boxes were formerly reckoned, and by this means it is hoped that the Tea Brokers' Association figures will in future run more in unison than heretofore with the official ones issued by the Customs Authorities.

The Board of Trade returns (which embrace statistics from all the Bonded Warehouses in the United Kingdom) for the past three calendar years were:—

	Home Consumption	Export.	Total Deliveries.	Bonded Stock Dec. 31.
	lb.	lb.	lb.	lb.
1895	221,800,000	30,283,000	252,063,000	103,451,000
1894	214,341,000	31,479,000	246,010,000	102,062,000
1893	209,097,000	34,177,000	244,274,000	102,380,000

From the above it will be seen that Home consumption shewed a steady increase, while, owing to greater facilities for direct Trade between China and other countries, exports from here mark a further shrinkage, though, as will be seen on the previous page, those of British growth have increased.

Allowing for expansion, at a similar rate our requirements during the twelve months may be set down at 258,000,000 lb., of which.

India will probably send (including the Madras Presidency)	...	128,000,000 lb.
Ceylon	...	90,000,000 lb.
Java	...	5,000,000 lb.
Leaving China to supply, say		35,000,000 lb.
		258,000,000 lb.

PROSPECTS.—Given that the out-turn during the coming season does not show a very marked increase on its predecessor, although it is difficult to forecast at so early a period, the outlook is certainly more favourable than at this time last year. The market is not likely to be hampered in the case of India as it was at the opening of 1895-96, when, owing to the exceptionally good crop of 1894, the trade over-bought medium and fine grades, and finding they could not quit them except at a considerable sacrifice on cost, were less disposed than usual to give attention to first arrivals of that of 1895, especially as quality did not compare favourably with their holdings. The contrary will, in all probability, be the case this year, as, in addition to the unusually low range of prices established, supplies of all kinds above common and medium are contracted, and should leave dealers free to operate if the new Teas prove of useful and fine description.

The gradual falling off in the consumption of China Congou, which will possibly be intensified in the near future, should help the sale of British grown, as the demand for the Colonies and America, as well as Russia and other places, is steadily expanding, consequent on the persistent efforts made to that end in those countries, under the auspices of both the Indian and Ceylon Tea Association. Without such aid production bids fair before long to outstrip consumption, as is already the case with some other articles from the East.

The unsatisfactory results of Calcutta and Colombo purchases, especially where they have been held over, are in a measure attributable to the non-keeping qualities of a large portion of the year's shipments—more apparent in the produce of an unfavourable season than when the liquor is rich and full in flavour. It must also be borne in mind that invoices printed on "Importers' account" do not, particularly in busy times, receive the same attention from London buyers as formerly, in comparison with direct shipments from the gardens. Moreover, as some of the leading buyers often only taste the latter, the question of having a separate time for the sale of these has been mooted.

MANUFACTURE.—It is evident that improvements in machinery and other appliances, have lessened many of the difficulties formerly experienced in the manufacture of the leaf, and so far as appearance goes, contrasted with a few years ago, there is on the whole a marked change for the better. With fairly propitious weather then the policy of making a moderate quantity of fine, or a larger proportion of common quality, has to be determined according to the situation and capabilities of each estate. In view, therefore, of an increasing output from most quarters it seems desirable, wherever possible, particularly in Darjeeling, Assam, and the higher parts of Ceylon, that attention should be directed to the production of choice descriptions, with the special characteristics for which these districts have already secured a reputation. Moderately fine plucking appears, judging by experience, to give the most satisfactory result on the whole, and also prevents an undue proportion of inferior common finding its way to this market where it is not wanted, and only tends to swell the bonded stock. While a certain quantity of fine tea is required the chief demand from the home trade is for useful and medium kinds, with fair style of leaf and thick "coloury" infusions. On the other hand, exporters lay more stress on a good leaf, with a flavoury liquor, even though not quite so strong.

SIZE OF BREAKS.—No alteration has been made since last year, the limits for large breaks remaining as under:—

INDIA.	CEYLON.
20 Chests.	12 Chests.
30 Half-chests.	18 Half-chests.
50 Boxes	30 Boxes.

Breaks of lesser size are sold separately at the close of the auctions.

ASSORTMENT.—There seems no reason to alter the suggestions made in our previous Annual Circulars as to assortment, viz.—"A fine Broken Pekoe, a good Pekoe, a Pekoe Souchong (to include the "bold leaf from the Pekoe), and a small equalised Broken Leaf Tea or Pekoe Fannings. Dust should be sifted out from all the lines and shipped in a break by itself, as 'dusty' parcels are very unsaleable." This refers especially to Broken Pekoes both from India and Ceylon, which, in many cases during the past season, have been too much mixed with small siftings and dust.

Full-sized breaks are in favour with the Trade, as time is economised in dealing with them, and, although on Estates of limited area, it may not be possible to pack large quantities at one time, where it can be arranged, the following scale will be found to meet the approval of different buyers, viz:—

		chests.
Pekoe Souchongs	...	50 to 150
Pekoes	...	30 to 100
Broken Pekoes (ordinary)	..	25 to 50
Finest Orange Pekoes ...	...	20 to 30
Broken Orange Pekoes and No. 1 Pekoes		30½ to 60½

STYLE OF PACKAGES.—Metal packages have been more freely used, and appear acceptable to most buyers, though some—especially Exporters—still prefer the wooden ones.

For Fine and finest lines, half-chests are generally liked, and it is often feasible for managers to pack 30 half-chests, which sell as a large break, when they would not have sufficient to fill 20 full chests. Boxes may be occasionally sent but should not exceed 28 lb. gross, otherwise 1 lb. draft has to be allowed.

BULKING, &c.—A larger proportion of factory-bulked Tea has been received, especially from Ceylon, and in most instances, the appearance was found sufficiently regular to obviate the need of incurring extra expense here, though, in a few cases, through want of care in the process of filling the packages, the leaf at the top was unnecessarily crushed, which in some gardens has been avoided by the use of patent packers.

WAREHOUSE CHARGES.—Appended is a table showing the scale of warehouse charges in London, by attention to which a considerable saving may be effected if the gross weight of the packages is regulated in accordance therewith.

LONDON WAREHOUSE CHARGES—(LESS 10 PER CENT DISCOUNT) PER PACKAGE WEIGHING GROSS.

	160 lb. to 199 lb.	130 lb. to 159 lb.	90 lb. to 129 lb.	80 lb. to 89 lb.	60 lb. to 79 lb.
	s. d.	s. d.	s. d.	s. d.	s. d.
Landing and Housing Rate (charged when Tea is sold privately)...	2 3	1 10	1 6	1 4	1 3
Management Rate (charged when Tea is sold at Public Sale)	2 9	2 3	1 10	1 8	1 5
Bulking and Taring	2 0	1 8	1 5	1 3	1 2
Bulking or Taring separately ...	1 6	1 3	1 0	0 11	0 10
Rent per week ...	0 1	0 0½	0 0½	0 0½	0 0½

	45 lb. to 59 lb.	35 lb. to 44 lb.	17 lb. to 34 lb.	Not exceeding 16 lb.
	s. d.	s. d.	s. d.	s. d.
Landing and Housing Rate (charged when Tea is sold privately)...	1 0	0 10	0 6	0 3
Management Rate (charged when Tea is sold at Public Sale)	1 2	1 0	0 7	0 4
Bulking and Taring	0 11	0 8	0 6	0 4
Bulking or Taring separately	0 8	0 6	0 5	0 3
Rent per week ...	0 0¼	0 0¼	0 0¼	0 0¼

N.B.—For determining the Class under which a Break is chargeable, the average gross weight must be ascertained. When the fraction of the average is half a pound or more, the higher rate will apply. Thus the average of a Break being 89½ lb. gross, the whole Break will be rated at 90-129 lb.; but the average being less than 89½ lb., the whole break will be rated at 80-89 lb.

WEIGHING.—It should further be borne in mind that in all cases it is advisable to add at the Garden a few ounces of Tea in each package over the quantity invoiced, so as to avoid the loss in weight often caused by fractions of pounds which (though taken into account in the London Warehouse charges) are not recognised by the Customs authorities when weighing here. On the other hand, the tare should scale a few ounces under the pounds invoiced.

For example, take two chests, each weighing 114 lb. gross:—

			lb.	oz.		lb.
No. 1.	Actual	Tea ...	79	15	is called	79
	,,	Tare ..	34	1	,,	35
No. 2.	Actual	Tea ...	79	1	is called	79
	,,	Tare ...	34	15	,,	35

In the first instance there is a loss of 15 ounces, and in the second only of 1 ounce.

ANALYSIS OF CROP.

ASSAM.—The crop has not on the whole been very good, particularly marked in early arrivals, the Teas being less full and brisk in cup than in the previous Season. Towards the close of 1895, however, and commencement of 1896, some shipments came to hand possessing full autumn flavour, without the undesirable reddish appearance generally characteristic of the dry leaf of cold weather pluckings. These were much appreciated and sold well, favourably influencing the year's average of many gardens. During 1895 the yield was about 55½ million lb., against 53½ and 52 million lb., in 1894 and 1893 respectively.

CACHAR AND SYLHET.—The districts also sent inferior Teas, being as a rule well made, but drawing thinner infusions than in the preceding year. The market was unfavourable, and the total result to date is fully 1½d. per lb. under that of the corresponding previous eight months. There was also an increase in the output, it being 39¼ million lb, compared with 37½ and 38 million lb, for 1894 and 1893, which will partly counterbalance the lower prices.

DARJEELING AND TERAI.—Although the out-turn was rather below the original estimates, it proved on the whole to be undesirable, as a very small portion possessed the specially choice flavour looked for in these Teas. The few "stand-out" shipments consequently commanded high rates, and the average though rather above 1893-4 shows a shrinkage of 1½d. per lb, on that of 1894-5. Yield for the three Seasons—10¾, 10, and 10½ million lb.

DOOARS.—Quantity manufactured was much larger, but quality being below par, 1½d. per lb, less was obtained than in the year before. Though some of the Teas were light in cup, others had full flavour, which commended them to the Trade. Yield for the past three years, 20, 16¾, and 15½ million lb.

CHITTAGONG.—Shipments were of an ordinary type, and receipts rather less, being 800,000 lb, compared with 860,000 lb, and 958,000 lb, in 1894 and 1893.

KANGRA, DEHRA DOON & KUMAON.—Quality from the first of these was below the average, there being a scarcity of really fine. The produce of the other two districts is principally sold locally. Yield has not varied much, being about 4¼ million lb, for the last three years.

TRAVANCORE AND S. INDIA.—In many cases arrivals from the Madras Presidency have shown improvement in style of manufacture, but those from Travancore were often wanting in strength, while most from the Neilgherries lacked the fine flavour which renders them valuable. Partly in consequence of fresh acreage coming into bearing in Travancore, and increased amount was received, viz., 2½ million lb, against 2 and 1¾ million lb, in 1894 and 1893.

CEYLON.—The Teas which came to hand in the autumn months were good; but Planters appear to have had inclement weather to contend against during a great part of the year, so that on the whole, the crop was of a medium character, shipments from the higher elevation Estates on many occasions showing a falling off in flavour. From 1st July last 627,000 packages passed the hammer realising 8½d. per lb. against 562,000 packages in the corresponding period of 1894-5 which brought 9¼d. per lb. Total Exports from Colombo for the past three years were 98,000,000, 84,900,000 and 84,400,000 lb. respectively.

JAVA.—Quality has been fully maintained in the produce of this Island, and the more favourable market for Pekoes and Pekoe Souchongs at the commencement of 1895 induced larger shipments. Imports being nearly 4½ million lb, versus 2¾ and 3¼ million lb. in the twelve months of 1894 and 1893.

MONTHLY AVERAGES OBTAINED IN LONDON FOR GARDEN INVOICES, FROM THE DIFFERENT DISTRICTS OF INDIA, ALSO FOR CEYLONS AND JAVAS, FROM 1ST JULY TO END OF FEBRUARY, FOR SEASONS 1895-96, 1894-95 AND 1893-94.

INDIA, CEYLON AND JAVA TEA.—MONTHLY REVIEW, SEASON 1895-96.

From the date of our last Annual Report, issued 20th March, 1895, until the declaration of the Budget on the 2nd May, the market remained quiet for India Tea, with, on the whole, an easier tendency, except in the case of good liquoring parcels, which improved in value. After the duty question was, however, settled for another year, a better tone prevailed generally, and hardening prices were realised for all useful and fine descriptions, while common also was in strong request. The first sales of the new crop took place on the 10th June, and during that month about 8,000 packages on garden account were catalogued, bringing 9½d. per lb. average, compared with the same price obtained for 4,000 packages in 1894. Quality from most of the districts was somewhat disappointing, but a few of the Dooars were liked on account of their "coloury" liquor. From April 1st to June 30th the highest and lowest quotations for "type," which was of a better standard than in the previous season, were 8 11-16d. and 7 14-16d. per lb., whereas in the same period of 1894 they were 7 2-16d. down to 6 7-16d. per lb.

Ceylons did not vary much, the average fluctuating slightly, from 8¼d. per lb., at which it stood at the end of March, to 7¾d. per lb. on June 30th.

Javas showed very little change, though towards the close there was more competition for the finer lines.

JULY, 1895.—Dealers did not consider arrivals of the new crop of India Tea sufficiently attractive to buy freely, and very few lots sold over 1s. per lb. The best parcels were taken at firm to advancing rates, but the bulk, consisting of poor liquoring descriptions, passed with a downward tendency.

"Type" ranged from 8 2-16d. to 8 … against 6 7-16d to 7 4-16d. per lb. in 18… to 7 6-16d. per lb. in 1893.

Owing to a larger quantity of Ceylon … auction and the anticipation of heavy … were weaker during the first half of t… this fear being removed by the news o… ments from Colombo there was a reacti… average rising from 7½d. to 8¼ per lb.

Javas were easier at the commenceme… rallying a little, closed with a quiet tone … offering being limited.

AUGUST, 1895.—Common and und… were in full supply, and prices tende… Pekoes falling to 6½d. per lb., Pekoe … 5¾d. per lb. and Broken Pekoes to 7d. p… the end of the month there was som… common, but medium continued depress… There was, however, an increasing de… few "stand out" parcels, for which … were obtained.

"Type" quotations fluctuated betwe… 8 4-16d. per lb. against 7 2-16d. and 7 … also 6 4-16d. and 7 4-16d. per lb. in 1894 … spectively.

Sales of Ceylons were lighter, and p… improved for all Teas with good cup … average advancing at ½d. per lb. Quality … some estates sending better, while oth… alteration.

The common grades of Javas in sy… other growths were rather dull of sale, … a fair all-round business doing in mediu…

SEPTEMBER, 1895.—Trade in the … reviving, and there was a strong enq… liquoring sorts from India throughou… appreciably in value, while common w… wanted. The few finest brought extr… average for garden invoices being 9¼d. … 8 6-8d. per lb. in August and 8 3-8d. in …

"Type" varied from 7 7-16d. to 7 1… compared with 6 12-16d. to 7 9-16d. p… and 6 9-16d. to 7 7-16d. per lb. in 1893.

A brisker tone was apparent from … beginning, which gradually increased unt… —common to fair were ½d. to ¾d. per lb. d… about 1d. per lb., and finest in many c… per lb. partly due to quality.

The moderate sales of Java met wit… attention, prices all round tending upw…

OCTOBER, 1895.—Business continue… early part of the month, but later o… and reports from Calcutta that the am… for the United Kingdom would probably b… unsettled buyers, ordinary and mediu… lacking point, falling ½d. to 1d. per lb., … liquoring and "coloury" kinds held t… well. Fine and finest were in request, … being of very desirable style. One o… worth noticing was that the largest we… recorded were held from the 13th to … 57,000 packages, and the heaviest day's … to chronicled took place on the 21st, wh… packages passed the hammer.

"Type".—Lowest quotation, 7 10-16d. … quotation, 8 2-16d.; in 1894, 6 13-16d. a… lb.; and in 1893, 6 12-16d, and 7 2-16d.

For the first three weeks Ceylons w… at the final auction they weakened in … other growths. Exporters were buying P… and Pekoes more freely, the flavour b… though the teas were scarcely so strong …

Javas on the whole did not show any m… the average remaining the same.

November, 1895.—Useful to find India… mand throughout at an advance, esp… liquoring Broken Pekoes which were ½d. … dearer, while finest also were rather hig… Pekoe Souchongs and Pekoes with thin … out of favour and declined to 5½d. per lb. … and 6½d. per lb. for the latter.

Supplement to "CEYLON OBSERVER."

THE DEVELOPMENT OF NEW MARKETS FOR INDIAN AND CEYLON TEA.

DEAR SIRS,

The growing of Tea in British Dependencies is gradually revolutionizing the Tea trade of the world. The change of taste in favour of Indian and Ceylon Teas, which commenced in Great Britain, has been gradually but steadily extending to other countries.

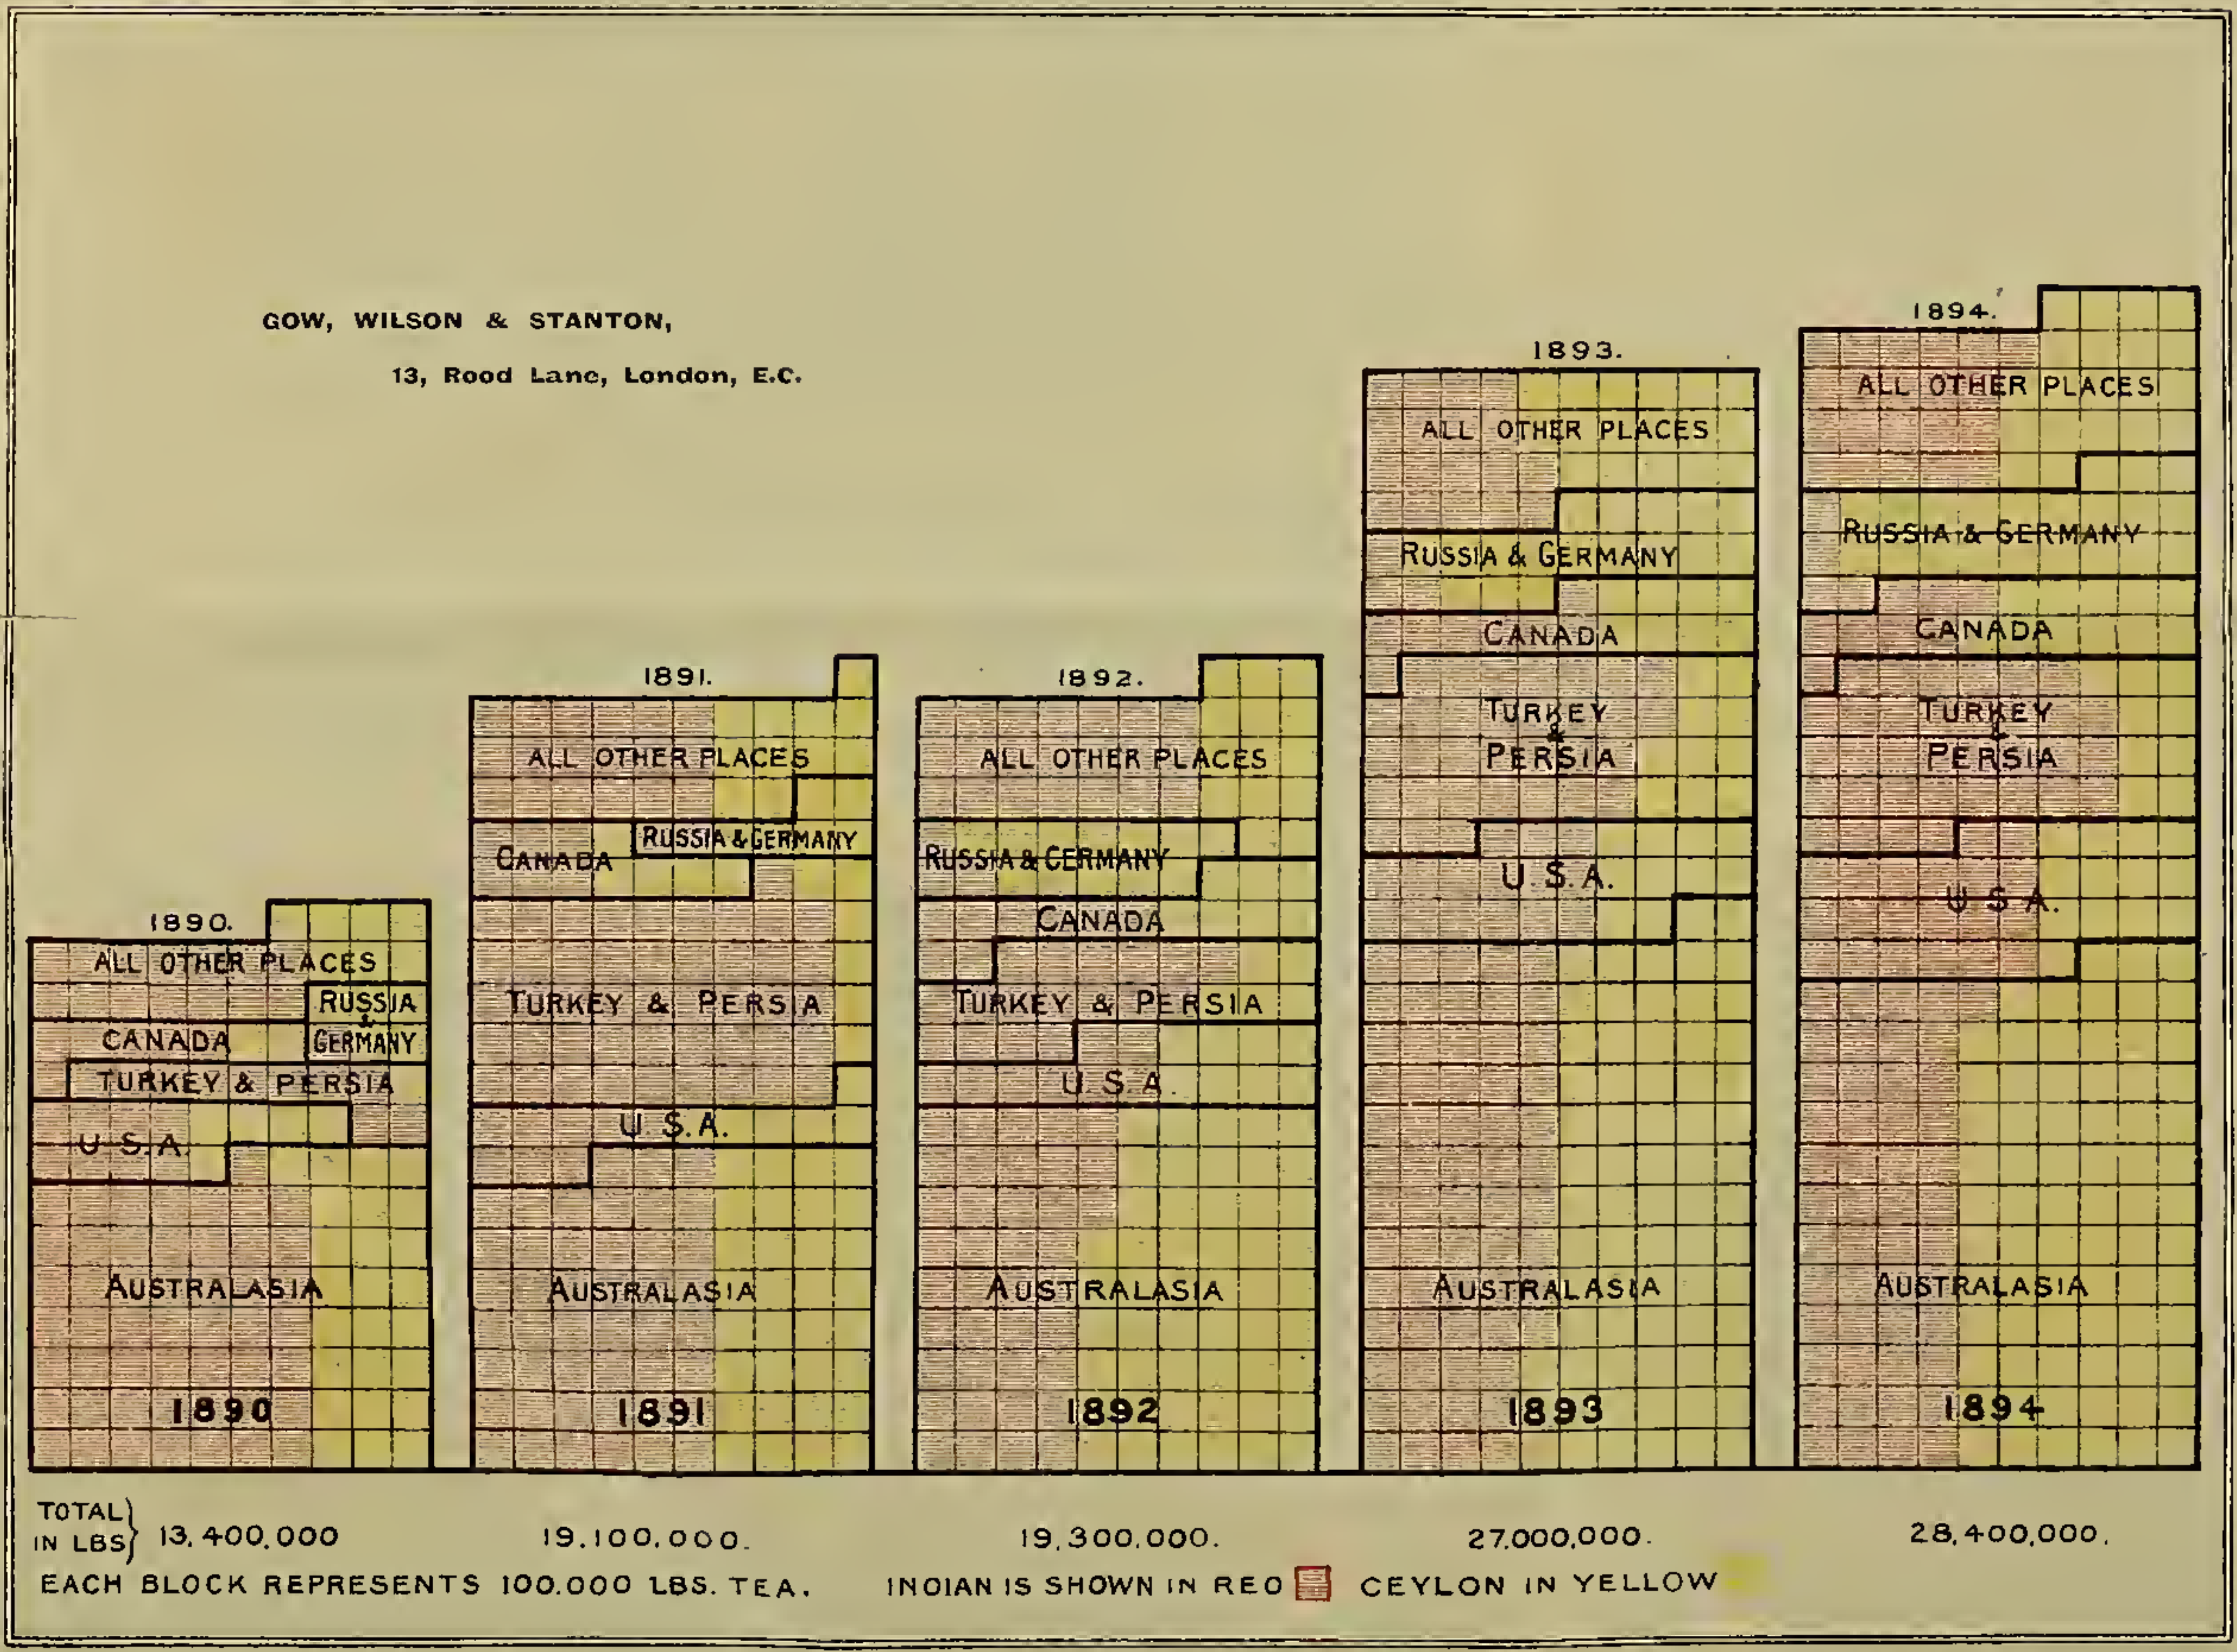
This development of the trade in markets outside Great Britain has now become sufficiently extensive to afford considerable relief to the London market, and to exercise a most important effect upon prices.

We are so impressed with *the absolute necessity which exists* for continuing to encourage foreign demand, that we again bring the matter forward without apology.

We are, DEAR SIRS,
Yours faithfully,
GOW, WILSON & STANTON,
Tea Brokers.

13, Rood Lane, London, E.C., *June*, 1895.

INDIAN AND CEYLON TEA TAKEN BY COUNTRIES OUTSIDE THE UNITED KINGDOM DURING EACH OF THE PAST FIVE YEARS.



The diagram on the front page shows the progress made in the principal external markets during the past five years, giving also, as nearly as can be ascertained, the total quantities of both Indian and Ceylon Tea used outside the United Kingdom. The progress made is remarkable, and indications point to a still more rapid and important development in some of the chief markets, in the near future.

With the coming crop from India estimated at about 140,000,000 lbs., and that from Ceylon at about 91,000,000 lbs., the importance of using every available means for increasing the consumption of British Grown Tea becomes so great that no efforts should be neglected by which new fields may be opened up.

The prosperity of the Tea trade depends mainly upon the creation of sufficient demand to cope with the ever increasing production; and unless constant attention is bestowed upon the discovery of new outlets and the extension of existing markets, the danger of over production which has been the ruin of so many flourishing industries, might prove equally disastrous to the Tea producer.

Looking at the diagram, it is clear that many markets which five years ago were comparatively insignificant, have since attained sufficient importance to exercise considerable influence upon the course of prices.

Approximate quantities of British Grown Tea used outside the United Kingdom.

Taking the most important market of all, namely :—

The Australian Colonies. One is surprised at the rapidity with which the taste has altered in favour of Indian and Ceylon Tea. In these Colonies the annual consumption of Tea amounts to about 30,000,000 lbs., and the quantity taken per head of population each year reaches about 7·66 lbs. Five years ago India and Ceylon contributed some 25 per cent., while at the present moment they supply about 45 per cent. of the total consumption.

Considering the similarity of race to ourselves, and the progress already made, there seems little reason to doubt that these Colonies will follow the example of the mother country in using almost entirely the Teas of our own dependencies.

North America. The next market in point of size is that of North America, comprising the United States and Canada, in the former of which large amounts of money have been spent in endeavouring to foster a taste for both Indian and Ceylon Teas. The progress made has been slow, but after several years of anxious work and costly expenditure, an appreciable change has at length taken place in the public taste, and—as will be seen by the diagram—the quantity of both Indian and Ceylon Tea recently used has shown a remarkable increase.

So many different agencies are now at work for developing this extremely important market that it seems quite beyond doubt that the corner has at last been turned, and that an increasing outlet will in the near future be found in this locality.

Russia. The expansion which has taken place in Russia in the use of Ceylon Tea during recent years is most encouraging, and affords almost a positive proof of its establishment in this large market, where some 70,000,000 lbs. of Tea are annually consumed. There is also a moderate sale for the more delicate liquoring kinds of Indian Tea.

Bearing in mind the strong demand which exists for fine China Teas and also for flavory Ceylons—the time seems to have arrived for Indian Tea proprietors to turn their attention to the conquest of this market. Ceylon has for years had a representative in Russia and has derived unquestionable benefit from his labours.

So much Tea reaches Russia through Germany, that exact figures cannot be obtained; the two countries are in consequence shown together in the diagram.

Persia and Turkey continue to use a large quantity of Indian Tea, and this market has also become a very useful outlet.

In addition to the above markets, there are various others which, in the aggregate, show important and encouraging results.

The Indian Tea Levy. The necessity for impressing upon Indian Tea proprietors the urgent need of continued subscriptions towards the fund for opening new markets cannot be too strongly insisted upon. Unless a liberal response is forthcoming to the appeal which has been made, there is danger lest the encouraging progress recently made in foreign markets should meet with an unfortunate check; an eventuality which, at the present juncture, would be essentially undesirable.

Coarse Plucking. A word of warning may be addressed to planters against the temptation to send home Tea of inferior quality, owing to the high prices ruling for the lower grades during the past season. Such a policy would probably lead to results most damaging to the general industry.

Prospects of Tea Cultivation. The cultivation of the Tea plant in India and Ceylon has been successfully carried on for a number of years, and has proved a source of considerable revenue to the proprietors. In both countries the industry has existed so long, and has proved so free from serious depredations, that it may be looked upon as fully suited to those lands, and as a thoroughly established agricultural product.

In India it has already a history of over 50 years, and has never been attacked by any serious blight or enemy of any sort; but its production has continued steadily to increase as the demand for it extended, until at present about 380,000 acres are under Tea culture, and a capital of some £15,000,000 is embarked in the enterprise.

In Ceylon, although the industry only dates back some 15 years, its progress has been one of uninterrupted success, and the climatic and geological conditions of the Island have proved most favourable to its profitable cultivation. About 280,000 acres are at present under Tea, representing a capital of some £11,000,000.

The fall in the value of Silver, the introduction of machinery, and improved means of communication have considerably assisted the Tea planter, and enabled him to gradually reduce the cost of production, and consequently to maintain, and in some cases even increase his profits, while the price obtained for his produce was declining.

At the present time the industry has every appearance of being thoroughly established upon a firm basis, and likely to continue a steady source of revenue, although like all agricultural products subject to good and bad seasons; still the Indian and Ceylon Tea industries have never yet been confronted with the evil of over production, and do not appear in serious danger of such a calamity, with the markets of the world before them and no other countries besides China and Japan and Java producing any appreciable quantity of Tea.

If only Tea proprietors will make up their minds as to the absolute necessity of strenuous exertions in the direction of fostering these outside demands, there seems little danger to the immediate future of the industry.

Now that so much attention is being bestowed by the public upon Tea investments it is more necessary than ever that no precaution should be left untaken which will conduce towards the prosperity of an enterprise gradually becoming more and more popular among investors, and one which has already done so much towards providing lucrative employment for many of our fellow countrymen, as well as natives of the Eastern dependencies of the British Empire.

GOW, WILSON & STANTON,
Tea Brokers.
